Letter from the Director...

The long anticipated findings from the first ever *Survey of Violence Victimization in New Mexico* are here! Among the many revealing findings, we learned that 1 in 4 adult women and 1 in 20 adult men in New Mexico have been the victims of rape or attempted rape in their lifetime. Perhaps the most startling revelation was the prevalence of *incapacitated rape* (unwanted, non-consensual sex when a person is very high, drunk or passed out). Among rape victims, 43% experienced an incapacitated rape in their lifetime. This translates into 1 in every 12 adult females and 1 in every 40 adult males.

More recently, the survey identified 8,027 victims of rape or attempted rape in 2005, of which 5,320 were victims of *completed* rapes. In the same time period, only 1400 incidents of rape were reported to law enforcement throughout the state.

Statewide law enforcement and service provider data have demonstrated that males are the offenders in approximately 85% of sexual assaults. What we did not know was that this is true even when the victim is *male*. Survey findings reported that 86% of female victims were sexually assaulted by a male, and 85% of male victims were sexually assaulted by a *male*.

Male and female victims of sexual assault are *two* times more likely to suffer from a serious disabling injury and approximately *six* times more likely to suffer from one or more chronic mental health conditions in their lifetime than those who are not victimized. This is our first glance at health outcomes associated with sexual assault. We are pleased that the survey data offer us an opportunity to learn much more on violence and health issues.

The aforementioned is just a small sample of the valuable information you will find in this year's report. Additionally, the first trends analysis of statewide sexual assault data was conducted. This analysis examines sexual assault data from the Central Repository from 2002 through 2005 and is presented herein. As an added bonus, some of the important data have been analyzed by county and are conveniently presented in county tables in the back of the report.

We are confident you will find the information presented in this report to be informative and provocative, as well. We hope that it serves you well in your work throughout the year. On behalf of myself and the Office of Injury Prevention, we thank you for your constant vigilance in your efforts to prevent and effectively respond to sexual assault in our communities.

Sincerely,

Betty Caponera, Ph.D.  
Director

## ACKNOWLEDGEMENTS

On behalf of the Central Repository, I would like to formally thank Governor Bill Richardson and First Lady Barbara Richardson for their unprecedented efforts as state leaders to prevent interpersonal violence in New Mexico and making possible, the first ever statewide survey of interpersonal violence in our state – the *Survey of Violence Victimization in New Mexico*.

I would like to formally acknowledge the host of dedicated professionals who have lent their invaluable expertise to this surveillance initiative.

# EXECUTIVE SUMMARY

## I. INTRODUCTION

Nationally, victimization surveys such as the National Crime Victims Survey and the National Violence Against Women Survey demonstrate more comprehensive reporting of crimes, and in particular, interpersonal violence crimes than those which are reported to law enforcement. While New Mexico law enforcement agencies have reported their incidents of domestic violence, intimate partner violence, stalking and sexual assault to the Central Repository, determining the rates of these crimes that were *never* reported to law enforcement was not possible. The long term goal to rectify this problem and make possible more accurate estimates of the prevalence and incidence of interpersonal violence in New Mexico was to conduct our own statewide victimization survey. To this end, in 2005 the Survey of Violence Victimization in New Mexico (SVV) was conducted, asking 2000 adult men and 2000 adult women about their experiences of violence. While all data captured from this survey will be analyzed over the course of time, several discouraging realities are clear from the preliminary findings of this survey:

1. The rate of sexual assault (rape and attempted rape) in New Mexico is staggering; and higher than national comparable rates found in the National Violence Against Women Survey (NVAWS), the most comprehensive victimization survey to date;
2. Rape is significantly under-reported to law enforcement;
3. There are significantly more victims of sexual assault than ever identified by law enforcement or service providers statewide, especially in the case of incapacitated rape;
4. There are significant co-morbidity and healthcare utilization issues associated with interpersonal violence; and
5. There are significant differences between males and females in the experience and outcomes of sexual assault crimes.

This summary discusses selected findings regarding rape among males and females from the Survey of Violence Victimization in New Mexico, together with selected findings on child sexual abuse derived from statewide law enforcement and service provider data submitted to the New Mexico Interpersonal Violence Data Central Repository in 2005.

## II. RAPE AMONG MALES

### A. Prevalence and Incidence

In the Survey of Violence Victimization in New Mexico, 5% or 1 in 20 adult males (18 and older) reported being the victim of rape or attempted rape in their lifetime compared to 3% nationally (NVAWS); 4% or 1 in 25 the victim of a *completed* rape. In 2005, there were 2,773 male victims of rape or attempted rape, 1,162 of these a completed rape.

## **B. The Circumstances of Male Rape**

While female and male adolescents and young adults have similar rates of rape, over half (53%) of male rape victims were raped as children (ages <13) compared to 44% of females who were raped as children.

Although fewer males (1 in 40) are the victims of incapacitated rape (unwanted, non-consensual sex while very high, drunk or passed out) compared to females (1 in 12), males (43%) are significantly more likely than females (29%) to experience their incapacitated rapes as an adult.

The rape experience for males includes a greater likelihood of *being hit with an object* (10%) and having a *knife or other weapon used on them* (7%) compared to females (7% and 4%, respectively). Additionally, more *male* victims of rape use *alcohol* (28%), *drugs* (2%) or *both* (4%) at the time of the incident than *female* rape victims (18%, 1% and 2%, respectively).

When it comes to rape, males like females, experience rape most often (85%) at the hands of a male assailant.

## **C. Male Rape Outcomes**

Fewer male rape victims reported being injured during their rape incidents (16%) compared to female rape victims (27%), and just under one-third (30%) of these obtained medical care for their injuries. However, male victims of rape are two times more likely than male *non-victims* to suffer from a *serious disabling injury* in their lives and seven times more likely to suffer *one or more chronic mental health conditions*.

Only 6% of male rape victims reported their rapes to police. Three quarters (74%) of male rape victims reported being *dissatisfied* with police response to their reported rapes, two-thirds of these, *very dissatisfied*. Most male rape victims do not report to police because they consider the rape to be *too minor or not a crime* (19%); they *fear the offender* (13%); or will *handle the situation themselves* (12%). Six times more males than females report that they *want the police to take their complaint more seriously, believe them and not laugh at them*.

Male rape victims who report their rape to police are significantly more likely (47%) than female rape victims (37%) to have an officer *arrest the offender or take him/her into custody*. However, since only 6% of males report their victimization to police, this means that only 3% of all cases of male rape result in a suspect arrest. To make matters worse, male victims of rape are only half as likely as female victims to be *referred to services*, such as victim assistance, a medical clinic, legal aid or a shelter.

Only 3% of male rape victims obtained a restraining order against their offender and half (52%) of these were violated by the offender. A mere 1% of male rape victims filed criminal charges against their offender. This low number of criminal charges filed by male rape victims prohibited the examination of gender differences in rape case dispositions.

### III. RAPE AMONG FEMALES

#### A. Prevalence and Incidence

As reported by adults 18 and older in the statewide victimization survey, 24% or 1 in 4 females are the victims of rape or attempted rape sometime in their lifetime compared to 18% (17.6%) nationally (NVAWS); 21% or 1 in 5 females the victim of a *completed* rape. In 2005, there were 5,224 female victims of rape and attempted rape, 4,158 of these, the victims of a completed rape.

Of all rapes reported by the survey respondents, 43% were incapacitated rapes. Female rape victims (8.5%) were three times more likely than male victims (2.5%) to experience incapacitated rape. Similar to male victims of incapacitated rape, most female victims are adolescents (39%), but unlike the rate for incapacitated rape of male children (17%), a significantly greater proportion of female victims of incapacitated rape (31%) have their experience as a child (ages <13).

#### B. The Circumstances of Female Rape

Forty-four percent of female rape victims were raped as children (ages <13), one-quarter (24%) as adolescents (ages 13-18) and one-third (34%) as adults. Eighty-six percent of female rape victims were raped by a male.

More female victims of rape, than males, reported being physically attacked: *pushed, grabbed or shoved* (44.5% vs. 37%); had their *hair pulled* (16% vs. 11%); were *choked or had an attempted drowning* (10% vs. 6%) and were *beat up* (14% vs. 9%). Similarly, twice as many female rape victims (32%) than male victims (16%) reported that their offenders *threatened to harm or kill them or someone close to them*; and nearly twice as many female rape victims (40%) than male victims (22%), *believed* that they or someone close to them would be seriously harmed or killed by their offenders.

#### C. Female Rape Outcomes

Slightly over one-quarter (27%) of female rape victims were injured during their rape incidents and one-third (34%) obtained medical care for their injuries. Like male rape victims, female rape victims are two times more likely than female *non-victims* to suffer from a *serious disabling injury* in their lives and six times more likely to suffer from *one or more chronic mental health conditions*.

Although a dismally low rate, female rape victims (19%) are three times more likely to report their incidents to police than male rape victims (6%). Most female rape victims who do not report to police say it is because they *were too young/a child* (17%); *feared the offender/afraid offender would get even* (17%); and *felt shame/embarrassment or thought it was their fault* (15.5%).

Twice as many female rape victims (33%), than male victims (16%) were *referred to services* (victim assistance, medical clinic, legal aid or shelter). Females were also significantly more likely than male rape victims to *have an officer see them in person* (67% vs. 53%) and *be referred to court or a prosecutor's office* (20% vs. 16%). However, female rape victims (13%)

were significantly more likely than male rape victims (8%) for *the police to do nothing* in response to a rape report.

Slightly over one-third (37%) of female rape victims' cases that were reported to police resulted in a suspect arrest. Since 19% of female rape victims reported their rape to police, this represents only 7% of all cases of female rape.

About half (49%) of female rape victims reported being *dissatisfied* with police response to their reported rape, over one-third of those, *very dissatisfied*. Most (19%) victims wanted the police to charge/arrest the offender or keep him/her locked up. Others (13%) wanted the police to *take a report, follow through with an investigation and question the offender*.

Three times as many female (11%) as male (3%) rape victims obtained a restraining order; and similar to male victims, about half (49%) were violated by the offender.

Seven percent of female rape victims *filed criminal charges against the offender*. One-quarter (25%) of the rape victims that filed criminal charges reported that their *charges were dropped*; 6% reported that the *offender was acquitted*; 45% reported that the *offender was convicted*; and 11% reported that the *offender entered a guilty plea*. Of those that were convicted or pled guilty, 88% were *sentenced to jail or prison* and the *average sentence* was 62.5 months. However, over half (54%) of the guilty offenders were sentenced to 48 months or less.

#### **IV. SELECTED CHILD SEXUAL ABUSE FINDINGS**

There were 1,545 victims of sexual assault who sought services from rape crises and mental health centers across New Mexico in 2005. Both, the *gender of the victim* and the *type of sexual offense* were documented in 1,241 of these cases.

There were 91 males and 362 females who were victims of *non-penetration sex crimes* that were reported to rape crisis and mental health centers in 2005. Of these, almost three-quarters (70%) of the males and over half (56%) of the females were children (ages 12 and under).

Similarly, there were 89 males and 699 females who were victims of *rape* that were reported to rape crisis and mental health centers in 2005. Of these, two-thirds (68%) of the males, and one-quarter (25%) of the females were children (ages 12 and under). In a trend analysis from 2002-2005, an average of 41% of the rapes reported to law enforcement were perpetrated upon those 12 and under. Over the same four years, an average of 31% of rapes was perpetrated upon *adults* and an average of 28% of rapes was perpetrated upon *teens* (ages 13-18).

There is a significant difference in ethnicity/race among child rape victims by gender. Over two-thirds (68%) of male rape victims 12 and under were *Hispanic*, followed by 14% *White (non-Hispanic)*, 12% *mixed ethnicity/race*, 5% *Native American*, and 2% *Black*. Among female rape victims 12 and under, 49% were *Hispanic*, 35% *White (non-Hispanic)*, 8% *mixed ethnicity/race*, 5% *Native American*, and 3% *Black*.

Of 172 female rape victims 12 and under who went for help in 2005, *prior sexual abuse* was documented on 121. Of these, 47% (57) were sexually abused prior to the most recent rape. Similarly, of 60 male rape victims 12 and under who went for help in 2005, *prior sexual abuse* was documented on 46. Of these, 43% (20) were sexually abused prior to the most recent rape.

While children 12 and under are the largest group of rape *victims* among those who went for help, adults (age 19 and older) comprised the largest group (73%) of rape *offenders*. Among these rape victims under 13 years old, only 2% were raped by a *stranger*. Of the 98% of child rapes perpetrated by someone known to the child, over three-quarters (77%) were raped by a *family member* and 21% raped by other *known offenders*. *Fathers* comprised the largest group of child rapists (30%), followed by *uncles* (15%), *cousins* (14%), *brothers* (12%) and *step-fathers* (9%). Among known *non-relative* rapists of children under 13 years of age, *friends* comprised the largest group (24%), followed by the *mom's boyfriend* (10%), *babysitters* (8%), *social acquaintances* (8%) and *teachers* (6%).

There is no difference in the rate of *incest* by gender among child rape victims. There were 171 female child rape victims who went for help in 2005 and documented the relationship of the perpetrator. Of these 76% (130) were victims of incest. Similarly, there were 60 male child rape victims who went for help in 2005 and documented the relationship of the perpetrator. Of these 75% (45) were victims of incest.

While one-third (35%) of male victims of sexual assault go for services within the first year of the assault, an analysis of sex crimes data from 2002 – 2005, found that males wait an average of 12.5 years after their sexual assault before seeking therapeutic services. Similarly, while 46% of female victims go for services within the first year of the sexual assault, females wait an average 9.4 years.

## **V. IMPLICATIONS OF THE FINDINGS**

### **A. Implications for Prevention**

When only 6% males and 19% females report their rapes to law enforcement, there needs to be a concerted effort to better identify rape victims by focusing on *why* they do not report. There are significant gender differences in why victims do not report. Most males in the statewide survey did not report because they considered the rape to be *too minor or not a crime*, while females *feared their offender or felt shame*. These differences must be taken into consideration for successful prevention education.

Perhaps one of the most startling findings from the statewide victimization survey was the proportion of incapacitated rapes among females and the proportion of these experienced as children. Of all rapes among females, 8.5% were incapacitated rapes; and unlike males, who most experienced incapacitated rapes as adults (43%) and adolescents (40%), female victims experienced incapacitated rapes most as adolescents (39%) and children (31%). Adult females experienced 29% of the incapacitated rapes. Interventions focused on preventing incapacitated rape should be a primary goal among statewide prevention programs.

If prevention efforts could dramatically reduce the number of females who perpetrate sexual offenses, the *reduction* in the number of victims and incidents of sexual assault would be negligible. All sources of data examined for this report demonstrate the overwhelming reality that males perpetrate rapes: law enforcement incidents (93%); service provider's cases (97%); SANE cases (97%) and survey findings (85%). Even when males are the rape victims, males are also the perpetrators 85% of the time. Until more prevention programs target males as the focus of their interventions, little will be accomplished to reduce the incidence of rape and sex crimes, overall.

Similarly, much prevention is focused on children because children comprise so many of those victimized: 44% of the rape victims identified in the statewide survey; 33% of rape victims identified by law enforcement and 49% of rape victims identified by service providers. However, these same sources of data reveal that rape *offenders* are overwhelmingly *adults* (law enforcement 78%, service providers 84%, and SANE units 84%). Children have little power to counter the sophisticated coercion techniques, verbal threats, physical intimidation and physical force of adult offenders. Therefore, more prevention should be focused on working with *adults*, and especially *male adults*, to stop sexual assault and abuse.

What is it that makes *male Hispanic children* (68%) dramatically more susceptible to rape compared to male children of other races/ethnicities? The prevention implication is unclear but the need to study this issue is most evident.

Who are the primary perpetrators of the sexual abuse of children? They are family members, chiefly their fathers, step-fathers, uncles, cousins and brothers. Prevention programs should be two-fold: 1) prevention aimed at helping a child guard against family members as perpetrators and what to do in the event of sexual abuse by a family member; and 2) prevention aimed at helping the family members examine their own sexual behaviors and boundaries, identify healthy and unhealthy sexual behaviors/practices by relatives (and others that their children may come into contact with), learn how to protect their children from sexual abuse by relatives (and others) and access available resources.

## **B. Implications for Law Enforcement**

The statewide survey identified 5,320 rape victims in 2005. In the same time period, law enforcement reported 1400 rape incidents. An explanation for the disparity in identifying rape incidents is the scope of rape (penetration) crimes captured. While the survey captured many forms of criminal sexual penetration and incapacitated rape, law enforcement codes restrict the types of penetration crimes captured and do not capture incidents of incapacitated rape, a type of rape that comprised 43% of the rapes identified by the survey. To this end, much consideration should be made by law enforcement and the FBI which guides law enforcement, to expand the types of criminal sexual penetration captured to include more types of penetration, especially incapacitated rape.

Both male and female rape victims from the statewide survey reported being *dissatisfied*, most *very dissatisfied* with the law enforcement response to their complaint. The most common reason given for their dissatisfaction was that they wanted the police to *charge/arrest the offender or keep the offender locked up* (18%) and to *take a report and follow through with an investigation, to question the offender* (13%). When victim dissatisfaction was examined by gender of the victim, there were dramatically more very dissatisfied males (66%) compared to females (38%). The implications are unclear. Perhaps this is more a matter of policy change, regarding officer response to alleged rape victims rather than the actions of individual officers. Perhaps it is a matter of officer sensitivity training responding to male complaints of rape. Finally, perhaps there is an implication for the role of victim advocacy and an examination of protocol for referral of rape victims by responding officers to advocacy services.

## **C. Implications for Healthcare**

Slightly over one-quarter of rape victims (29%) are injured during their rape incidents, and approximately one-third of these go for medical treatment. Sexual Assault Nurse Examiner units capture information regarding sexual assault patients that present to their facilities and offer

forensic evidence collection and sometimes a physical exam. However, no standardized monitoring system currently exists to reliably document the number of rape victims that go to emergency departments or doctor's offices as a result of a sexual assault. Further, twice as many rape victims as non-victims suffer from serious disabling injury and approximately six times as many rape victims as non-victims suffer from one or more chronic mental health conditions. Without identifying these patients, it is impossible to determine healthcare utilization due to sexual assault or to more effectively treat these patients by offering them appropriate referral services. The implication to improve public health is to consider the need for universal screening for lifetime exposure to sexual assault and other forms of violence.

Office of Justice Programs, US Dept. of Justice

**JANUARY 2007**

## INFORMATION PRESENTED

This report has four sections: Section One presents sexual assault findings from the Survey of Violence Victimization in New Mexico which offers statewide rates of the incidence and prevalence of rape, attempted rape and incapacitated rape, together with a discussion of the findings on selected elements of sexual assault crimes. Section Two presents an analysis of 2005 sex crimes data from the New Mexico Interpersonal Violence Data Central Repository, which includes findings from law enforcement, service providers and statewide Sexual Assault Nurse Examiner (SANE) units. Section Three presents a four-year trends analysis (2002-2005) of selected sexual assault demographic and crime characteristics from statewide law enforcement agencies and service providers and a discussion of the implications of the findings. Section Four offers county tables to present important trends information specific to each county.

## SECTION ONE: SURVEY OF VIOLENCE VICTIMIZATION IN NEW MEXICO

### I. Background

In 2005, the Department of Health, Office of Injury Prevention secured funds to conduct a statewide violence victimization survey (see **Appendix A: *Survey of Violence Victimization in New Mexico***). The survey was conducted by Schulman, Ronca and Bucuvalas, Inc. (SRBI) a national research organization with over 25 years experience conducting national and statewide surveys on health and trauma issues.

The purpose of the survey was to determine state estimates of the prevalence and nature of victimization among adults in New Mexico. The sample for the victimization survey was drawn from a statewide sample of telephone households developed by random digit dialing (RDD). A statewide random sample of 4,000 adults aged 18 and older: 2000 males and 2000 females, were interviewed. Interviewing for the survey was conducted between December 6, 2005 and January, 22, 2006. Comprehensive information regarding the survey methods used (sample construction, instrument design, programming, testing, interviewer selection, training, monitoring, conducting the interviews, response rates, field outcomes, data preparation and processing) is found in the *Survey Methods Report* available upon request from the Central Repository.

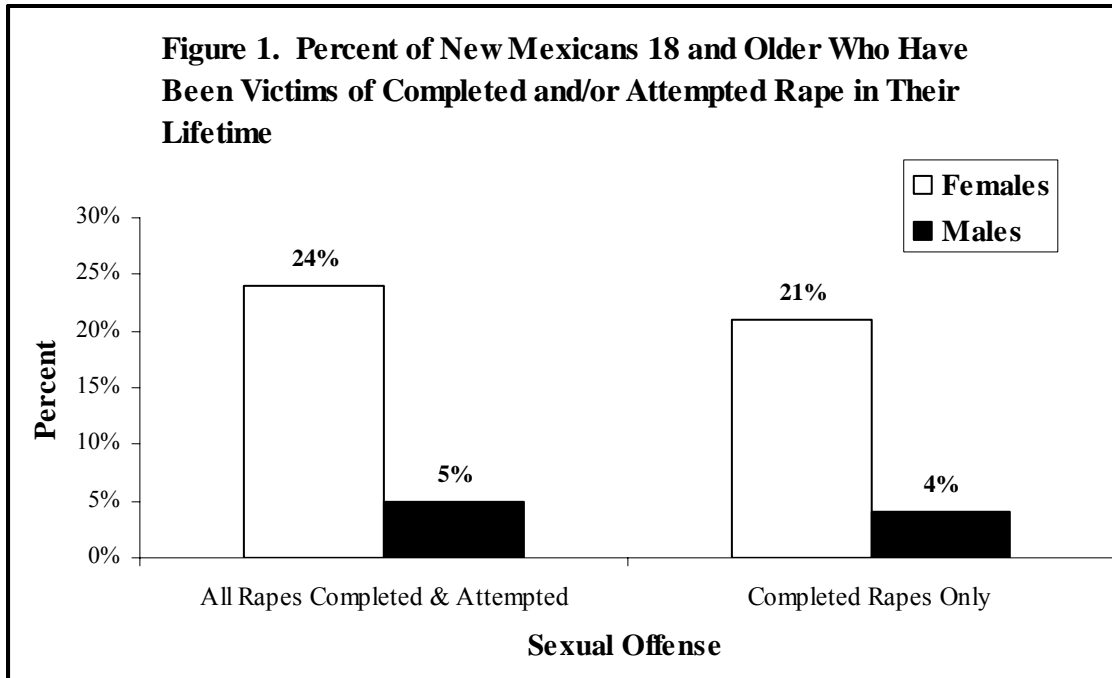

### II. Prevalence of Rape and Attempted Rape

Of all persons 18 and older in New Mexico, 15% (209,813) have been a victim of *rape or attempted rape* in their lifetime and 13% (183,078) of these have been the victims of a *completed* rape. The following presents: 1) both completed rape and attempted rape lifetime prevalence; and 2) the lifetime prevalence of completed rapes.

#### A. Prevalence of Rape and Attempted Rape by Gender:

▶ 5% (34,665) or 1 in 20 adult males

▶ 24% (175,148) or 1 in 4 adult females (see **Figure 1**)

**B. Prevalence of Completed Rapes by Gender**

► 4% (29,065) or 1 in 25 adult males

► 21% (154,013) or 1 in 5 adult females

When survey respondents were asked on how many different occasions they were raped in their lifetime, *males* reported experiencing an average of 2 (2.3) rapes each. *Females* who were ever rape victims in their lifetime experienced an average of 6.5 rapes each. However, since the *mean* or *average* calculation must consider all extremes, a more telling measure of rapes experienced by each rape victim would be a *median* calculation, the number of rapes for each victim marking the point at which exactly 50% of the victims fell below (experienced less than) and exactly 50% of the victims fell above (experienced more than). The *median* number of times *male* rape victims were raped in their lifetime was one (1.0). The *median* number of times *female* victims were raped in their lifetime was two (2.0).

**C. Prevalence of Incapacitated Rapes**

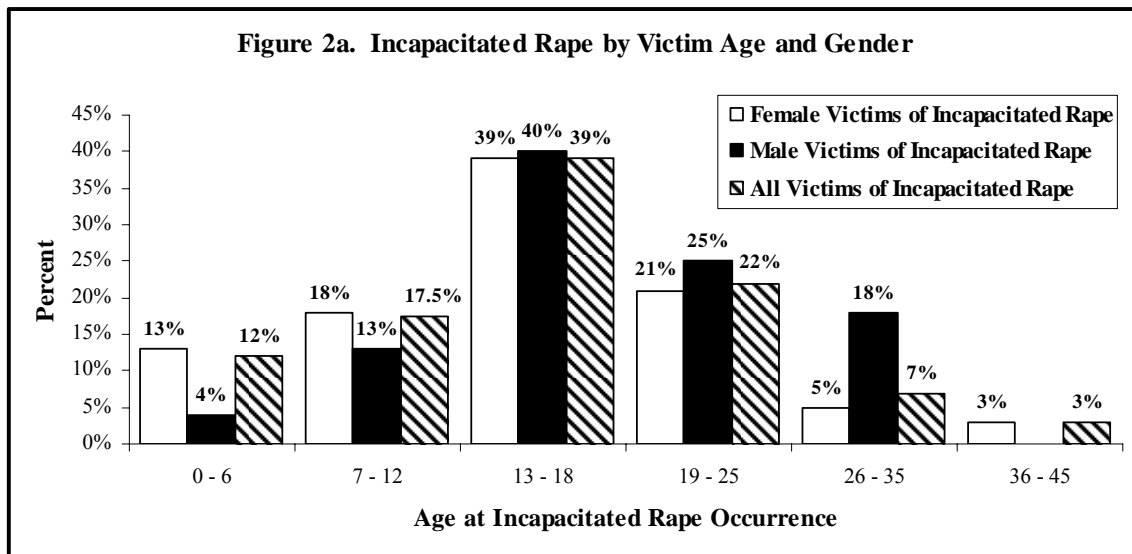

► 2.5% (16,886) or 1 in 40 adult males

► 8.5% (78,347) or 1 in 12 adult females

When the circumstances of a rape (unwanted, non-consensual sex) involve incapacitation of the victim due to alcohol and/or drug intake that renders the victim very high, drunk or passed out, it is considered *incapacitated rape*. Of the completed rapes reported by adults 18 and older in New Mexico (183,078), 43% (78,347) were *incapacitated rapes*: 78% (61,461) perpetrated against women, 22% perpetrated against men (16,886). Therefore, 5.5% of all adults in New

Mexico have been a victim of *incapacitated rape* in their lifetime: 8.5% (1 in 12) adult women and 2.5% (1 in 40) adult men.

An examination of the ages of victims at the time of their incapacitated rapes found that most (39%) occurred when victims were *adolescents* (ages 13-18), followed by *young adults* (ages 19-25), 22% and *children ages 7-12* (17.5%). More victims of incapacitated rape were *children under 7 years old* (12%) than *adults over 25 years old* (10%). Therefore, the total proportion of *children* (ages <13) who experienced incapacitated rape (29.5%) is greater than the proportion of *young adults* (22%) and only slightly less than the proportion of *all adults* (32%) who experienced incapacitated rape. See **Figure 2a**.

When examined by gender, significantly more *females* (31%) experience incapacitated rape as *children* (ages <13), than males (17%). Conversely, more *males* (43%) experience incapacitated rape as *adults* (ages >18) than females (29%). Male and female *adolescents* (ages 13-18) experience incapacitated rape at virtually the same rate (40% males, 39% females). Refer to Figure 2a.

### III. Rape and Attempted Rape in New Mexico in the Last 12 Months (2005)

#### A. Rape and Attempted Rapes, 2005

There were 8,027 victims of completed rape and attempted rape in the last year, or 6 victims per 1000 persons 18 and older. Adult *females* comprise 65% (5,254) of these victims for a rate of 7 victims per 1000 adult females. There were 2,773 male victims of rape and attempted rape last year, for a rate of 4 victims per 1000 adult males. See **Table 1**.

**B. Completed Rapes, 2005**

There were 5,320 adult victims of rape in New Mexico in the last year, which is roughly 4 (3.8) rape victims per 1000 adults 18 and older. Adult females comprise 78% (4,158) of these victims and the rate of *rape* among adult women last year was 6 (5.7) per 1000. There were 1,162 adult male victims of rape last year, for a rate of 2 (1.7) per 1000 adult males. Refer to Table 1.

**Table 1. Number of Adult Victims of Rape and Attempted Rape in 2005**

Crime	Total Victims	Rate per 1000 Persons 18 and Older	Adult Female Victims	Rate per 1000 Females 18 and Older	Adult Male Victims	Rate per 1000 Males 18 and Older
Completed Rape	5,320	4	4,158	6	1,162	2
Rape and Attempted Rape	8,027	6	5,254	7	2,773	4

**C. Demographics**

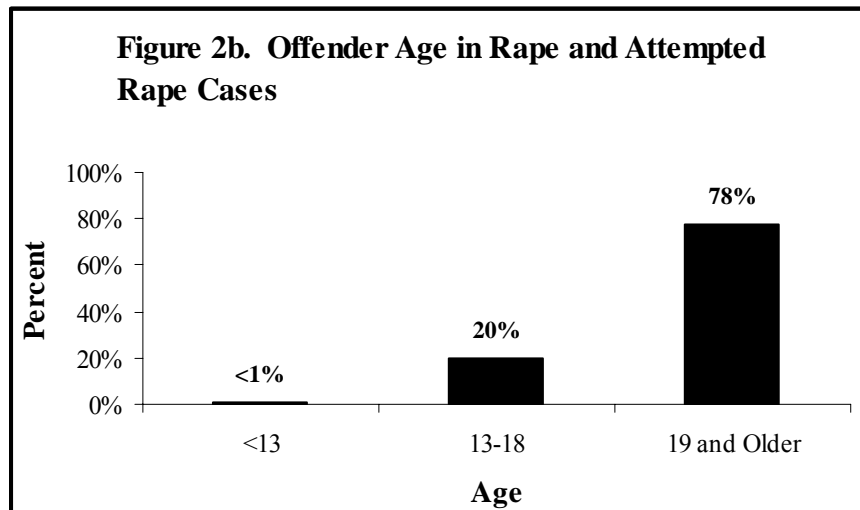

**1. Offenders**

**a. Sexual Assault Offenders Are Mostly Males**

While *males* comprise 16.5% (34,665 of 209,813) of all adults who were ever victims of sexual assault (*rape and attempted rape*), their offenders were frequently *male*, as well. Eighty-five percent of male *sexual assault* victims were victimized by a male. Conversely, only 14% of sexual assaults (*rape and attempted rape*) with a *female* victim were victimized by a *female*.

**b. Age of Offenders**

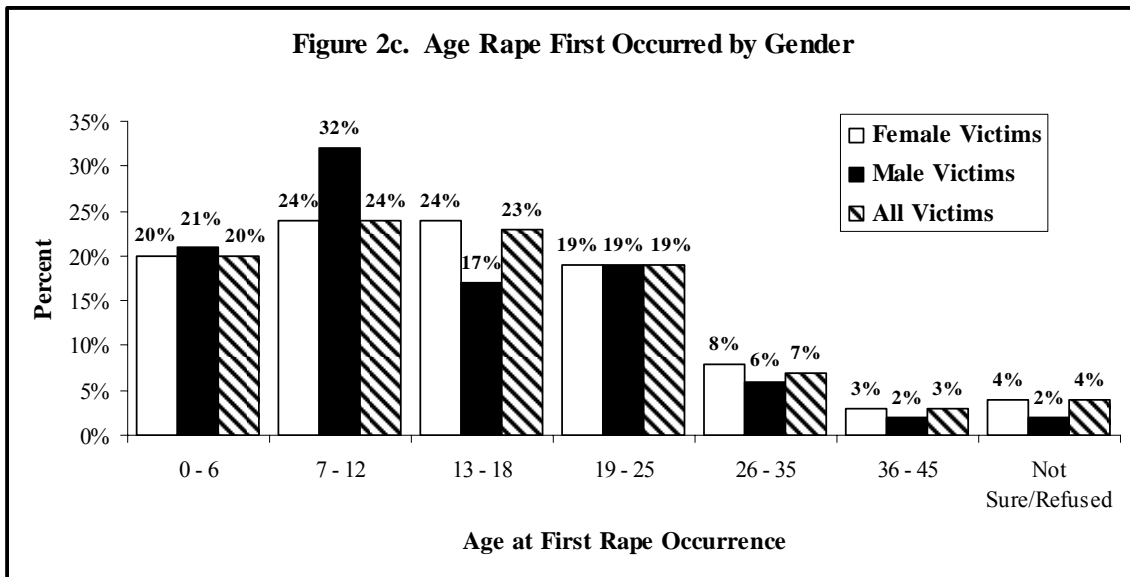

Over three-quarters (78%) of rape offenders are *adults* (age 19 and older). *Adolescents* (ages 13-18) comprise 20% of rape offenders and <1% of rape offenders were children (age <13). See **Figure 2b**.

## 2. Victims

### a. Age of Rape Victims

In general, most victims (24%) of rape were *children* ages 7-12, followed by *adolescents* ages 13-18 (23%), *children* ages 0-6 (20%) and young *adult* victims ages 19-25 (19%). When examined by gender, more *males* (53%) than *females* (44%) were raped by age 12. See **Figure 2c**.

### b. Ethnicity/Race of Rape Victims

Slightly over half (53%) of all rape victims were *White (non-Hispanic)* and one-third (33%) of rape victims were *Hispanic*. *Native Americans* comprised 5% of rape victims. *Blacks* and those of *Other race/ethnicity* comprised 2% of rape victims, respectively. *Asians* comprised 1% of all rape victims. See **Figure 3**.

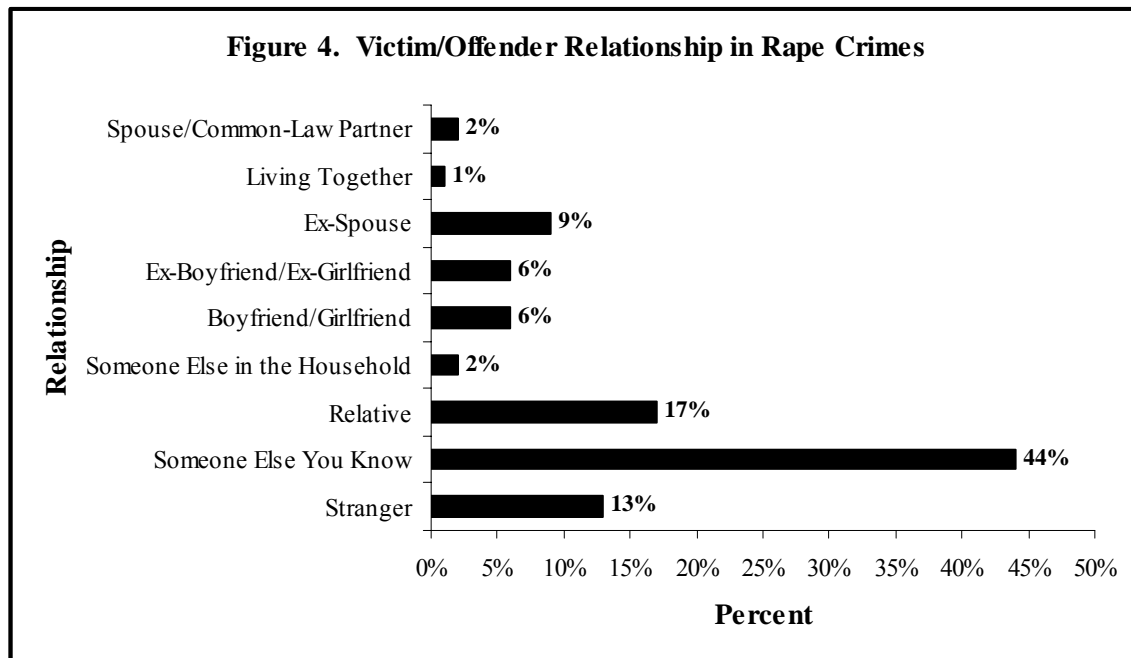

## D. Elements of Rape Crimes

### 1. Victim/Offender Relationship

Most rape victims were raped by *someone they knew* (44%) who was not a relative or intimate partner. Seventeen percent were raped by a *relative* and 13% by a *stranger*. Nine percent of rape victims were raped by a romantic partner: 6% *boyfriend/girlfriend*, 2% *spouse/common-law partner*, and 1% *living together*. Fifteen percent of rape victims were raped by an ex-intimate partner: 9% *ex-spouse*, 6% *ex-boyfriend/girlfriend*. Two percent of victims were raped by *someone else in the household* who was not a partner or relative. See **Figure 4**.

Since an ex-intimate offender (ex-spouse, ex-partner, ex-boyfriend/girlfriend) could have raped the victim while still in a relationship with the victim, victims were asked if the rape occurred *while they were romantically involved*, *after they were involved*, or *during and after* they were involved. Almost two-thirds (61%) of rape victims raped by a *current or ex-romantic partner* reported that they were raped *while they were still involved*. One-quarter of rape victims raped by a current or ex-romantic partner reported that they were raped *during and after* the time they were involved with the offender, and 12% reported that the rape occurred *after their involvement* with the offender was over. Therefore, 37% of rape victims who were raped by a romantic partner experienced a rape after the romantic relationship was over.

### 2. Rape and Alcohol/Drug Use

Over one-quarter (28%) of rape victims reported that their offenders were using *alcohol*, 3.5% reported that their offenders were using *drugs* and 14% reported that their offenders were using both *alcohol and drugs*. See **Figure 5**. Therefore, 45.5% of victims were raped by someone using alcohol and/or drugs. Forty percent of respondents reported that their offenders were

neither using alcohol nor drugs and another 14% reported that they were *unsure*. An examination by gender showed negligible differences in offender alcohol/drug use.

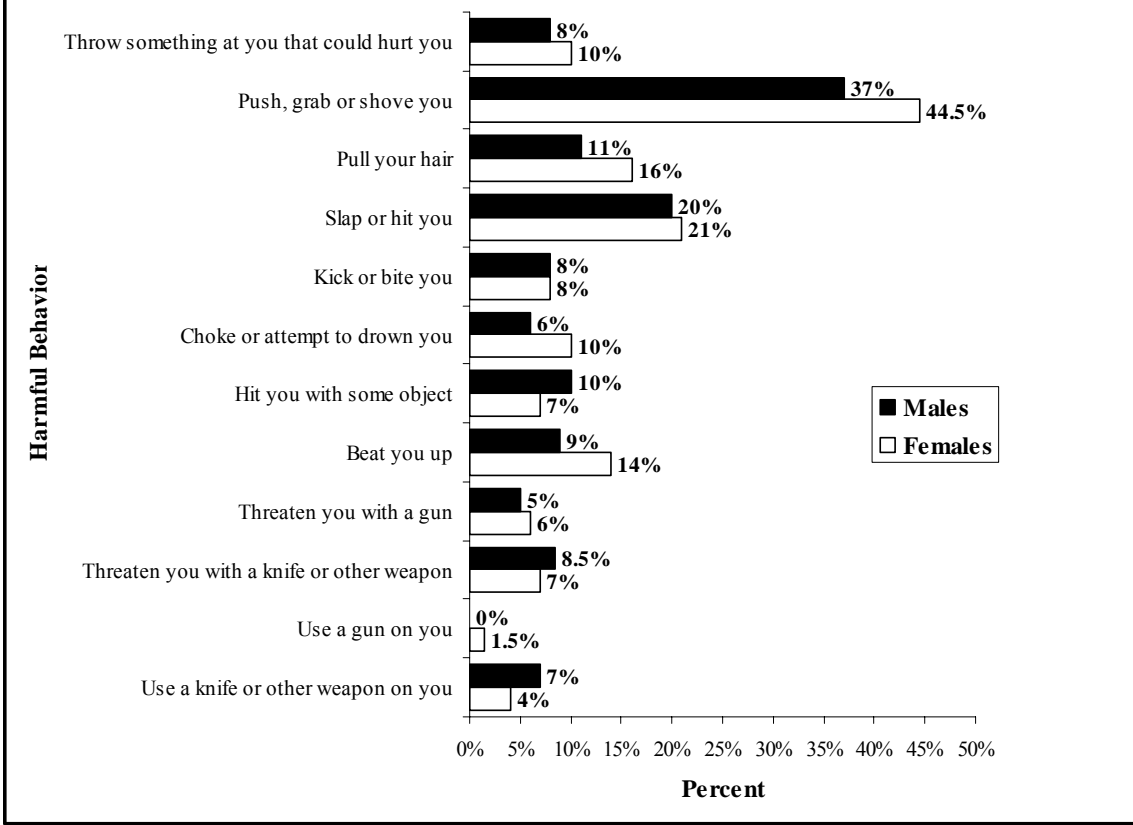

Three-quarters (75%) of rape victims reported that they were not using alcohol or drugs at the time of the rape incident. Of those victims who were using, 19% were using *alcohol*, 1.5% were using *drugs*, and 3% were using both *alcohol and drugs*. Refer to Figure 5. When examined by gender, significantly more *male* victims were using *alcohol* (28%) than *female* victims (18%). Slightly more *male* victims (2%) than *female* victims (1%) were using *drugs* and slightly more *male* victims were using both *alcohol and drugs* (4%) than *female* victims (2%).

### 3. Rape and Physical Violence and/or Threat of Violence

Slightly over half (53.5%) of all *male* rape victims and 47% of all *female* victims reported that they were not also a victim of physical attack. However, significantly more *female* rape victims than *male* rape victims were *pushed, grabbed or shoved* (44.5% vs. 37%); had their *hair pulled* (16% vs. 11%); were *choked or had an attempted drowning* (10% vs. 6%); and were *beat up* (14% vs. 9%). Conversely, significantly more *male* rape victims than *female* victims were *hit with an object* (10% vs. 7%) and *had a knife or other weapon used on them* (7% vs. 4%). See **Figure 6**.

Similarly, over one-quarter (29%) of rape victims reported that their offenders *threatened to harm or kill them or someone close to them*. However, when examined by gender of the victim, *female* rape victims (32%) experienced a *threat to be harmed or killed or have someone close to them harmed or killed* at twice the rate of *male* victims (16%). Not surprisingly, 40% of *female* victims and 22% of *male* victims *believed* that they or someone close to them would be seriously harmed or killed by their offenders.

**Figure 6. Rape Victims Physically Attacked and/or Threatened with a Gun, Knife or Other Weapon**

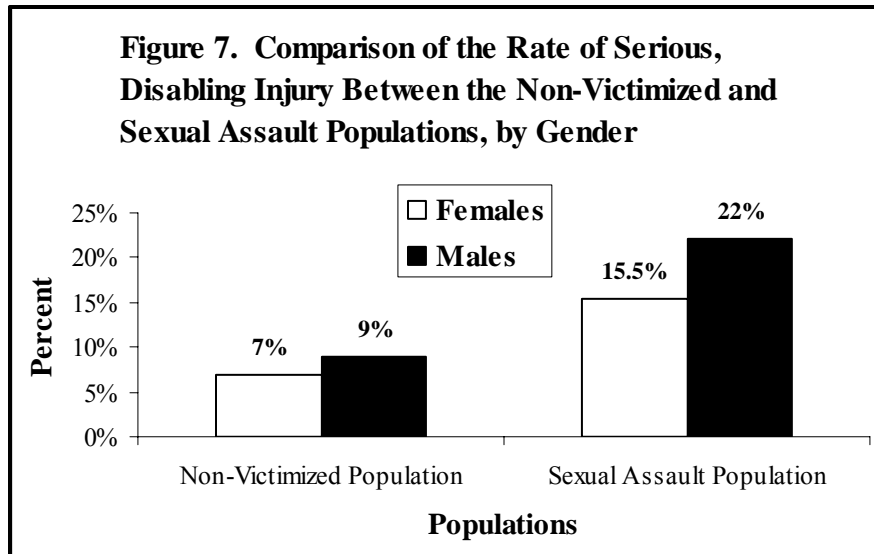

**4. Rape and Victim Injury**

In general, one-quarter (25%) of rape victims were *physically injured* during their rape incident. When examined by gender, however, significantly more *females* (27%) than *males* (16%) were injured during their rape incidents.

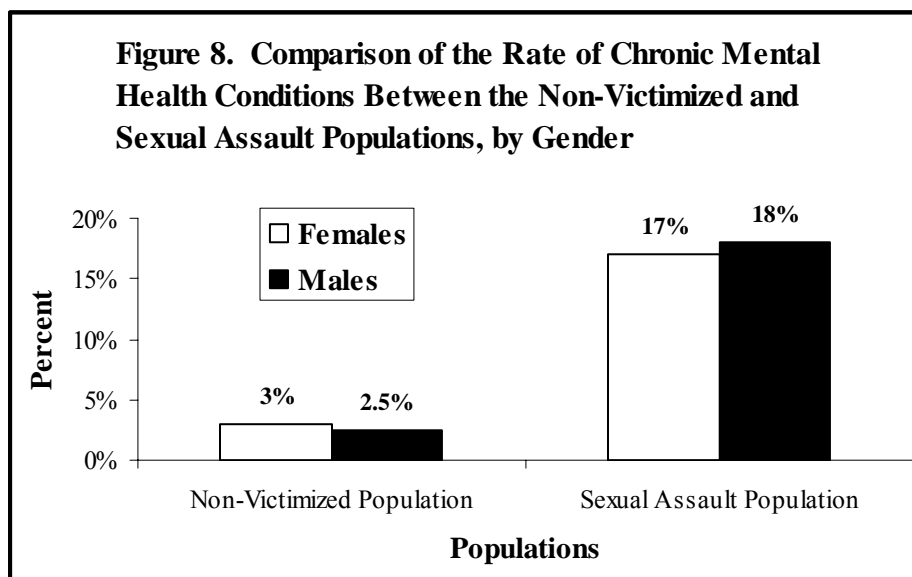

**5. Rape and Serious Disabling Injury**

Adult victims of rape are more than twice as likely (16.5%) to *sustain serious, disabling injury* than adults not victimized (non-victimized population) by any type of interpersonal violence (8%). When examined by gender, *female victims* (15.5%) of rape were 2.2 times more likely to have serious disabling injury than females in the *non-victimized* population (7%) at some point in their lives. Similarly, *male rape victims* (22%) were 2.4 times more likely to have a serious disabling injury than *males in the non-victimized population* (9%) at some point in their lives. See **Figure 7**.

## 6. Rape and Chronic Mental Health Problems

In general, adult victims of rape (17%) are *six* times more likely to suffer from one or more *chronic mental health conditions* than individuals who have not experienced any type of interpersonal violence (non-victimized population), 3%. Unlike other interpersonal violence crimes that revealed a significantly greater prevalence of chronic mental health conditions among female victims than male victims, *male* rape victims reported a slightly higher rate of chronic mental health conditions (18%) than *female* victims (17%). Similarly, the difference in the rate of chronic mental health conditions between the *victimized* and *non-victimized populations* when examined by gender is slightly greater for males. *Female rape victims* are *six* times more likely to suffer from one or more chronic mental health conditions (17%) than *non-victimized females* (3%). *Male rape victims* are *seven* times more likely to suffer from one or more chronic mental health conditions (18%) than *non-victimized males* (2.5%). See **Figure 8**.

## 7. Rape Victims Receiving Medical Care

One-third (33%) of injured rape victims *obtained medical care* for their injuries. There was a slight difference between the proportion of injured males and females that obtained medical care. Thirty-four percent of *injured female* rape victims obtained medical care for their injuries, compared to 30% of *injured male* victims.

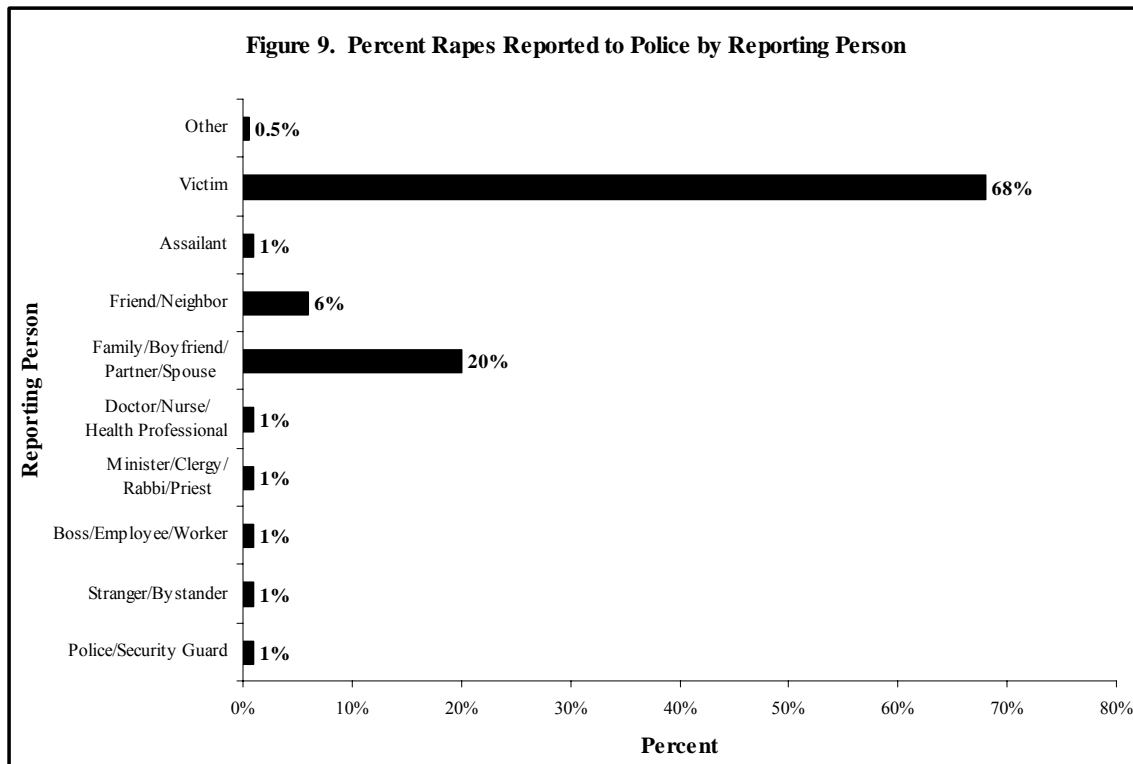

While rape victims could have gone to more than one place for treatment for injuries incurred during a rape, most rape victims (55%) reported going to an *emergency room or SANE unit* to be treated. Slightly over one-third (37%) of victims reported going to a *doctor's office or clinic* to be treated and 27% reported they were treated in a *hospital*.

When rape victims were asked how satisfied they were with the medical care they received, 80% said they were *satisfied*, 41% of these *very satisfied* with the treatment they received. Fifteen-percent of victims reported that they were *dissatisfied*, 8% of these *very dissatisfied*, with the treatment they received and 5% reported that they were *not sure*.

## 8. Rape Crimes Reported to Police

Similar to results obtained in the *National Violence Against Women Study* which found that 16% of rape victims reported their victimization to police, 16.6% of those in New Mexico who were raped at least once in their lifetime reported their rape to police. *Female* rape victims (19%) were *three* times more likely than *male* rape victims (6%) to report their rape to police.

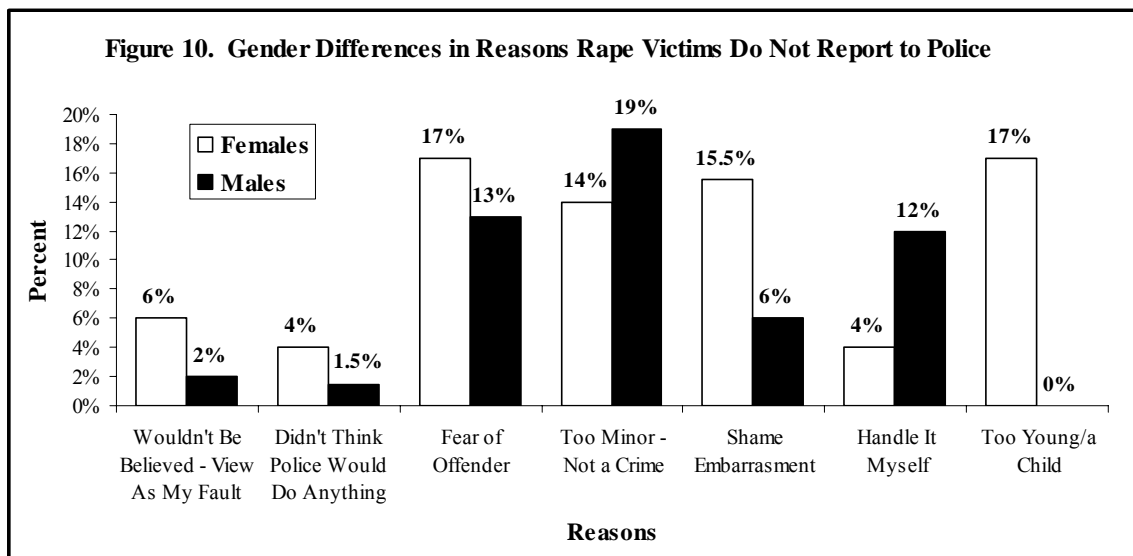

Of the approximately 17% of rapes that were reported to police, over two-thirds (68%) were reported by the *victim*, 20% were reported by *family* (spouse, partner, children, relative) or *boyfriend of the victim*, and 6% were reported by a *friend/neighbor*. See **Figure 9**.

## 9. Reasons Rape Victims Did Not Report to Police

Of the 83% of rape victims that did not report their victimization to the police, most said they did not report because they were *too young/a child* (17%), followed by those that reported *fear of offender/afraid offender would get even/scared* (16%), *thought that the crime was too minor/not a police matter/not serious enough/not a crime* (15%), and those that *felt shame/embarrassment or thought it was their own fault* (14%). See **Table 2**.

A comparison between male victims and female victims of the most mentioned reasons for not reporting their rape to police found that significantly more *females* than males did not report because they were *too young* (17% vs. 0%); *felt shame/embarrassment/thought it was their own fault* (15.5% vs. 6%); and *fear of offender/afraid he/she would get even/scared* (17% vs. 13%). Conversely, significantly more *males* than females did not report their rape because the incident was *too minor/not a police matter/not serious enough/not a crime* (19% vs. 14%); and because they *handled it themselves/got revenge/family handled it* (12% vs. 4%). See **Figure 10**.

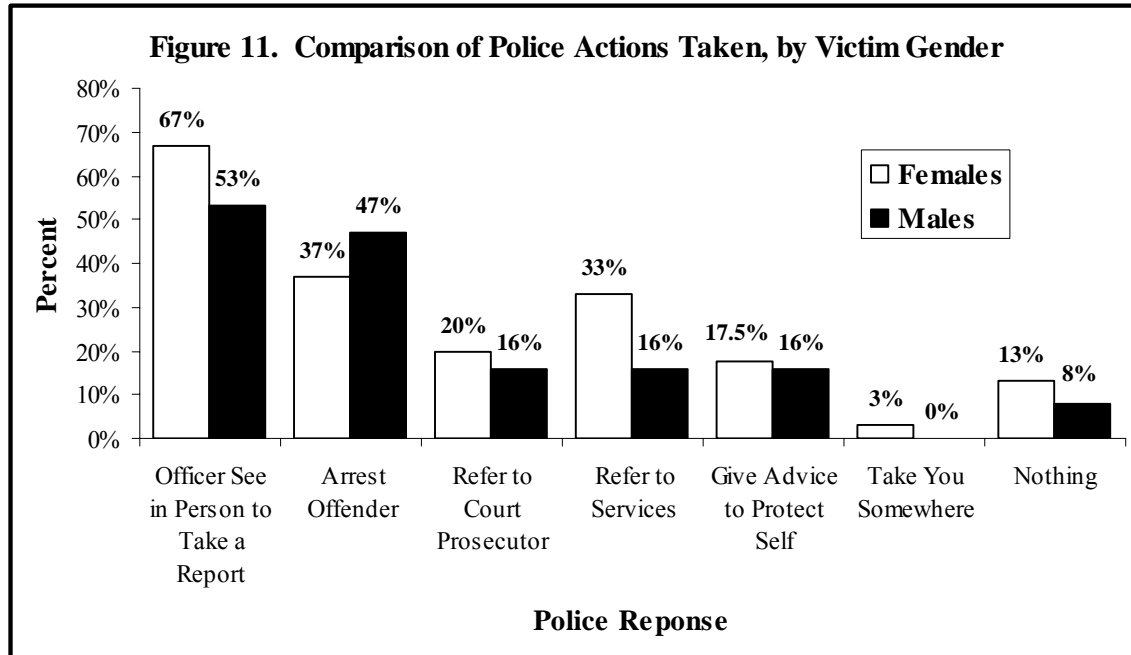

## 10. Police Response to Reported Rapes

Approximately two-thirds (66%) of the rape victims that reported their rape to police reported that an officer *saw them in person to take a report*. Slightly over one-third (37%) reported that the officer *arrested the offender or took him into custody*. Almost one-third (32%) reported that the officer *referred them to services, such as victim assistance, medical clinic, legal aide or a women's shelter*. One-fifth (20%) of the rape victims reported that the officer *referred them to court or a prosecutor's office*. Seventeen percent of rape victims who reported their rape to police were *given advice on how to protect themselves* and 3% were *taken somewhere by the police officer*. Of all victims that reported their rapes to police, 12.5% reported that the police did *nothing*.

When examined by gender, twice as many *female* rape victims (33%) were *referred to services, such as victim assistance, medical clinic, legal aide or a women's shelter* than male rape victims (16%). *Females*, were also significantly more likely than males to have an *officer see them in person and take a report* (67% vs. 53%); and be *referred to court or a prosecutor's office*

(20% vs. 16%). Unfortunately, female rape victims were also significantly more likely than male rape victims for the *police to do nothing* in response to a rape report (13% vs. 8%). Conversely, *male* rape victims were significantly more likely to have the officer *arrest the offender or take him/her into custody* (47% vs. 37%). See **Figure 11**.

### 11. Sexual Assault Rate of Suspect Arrest

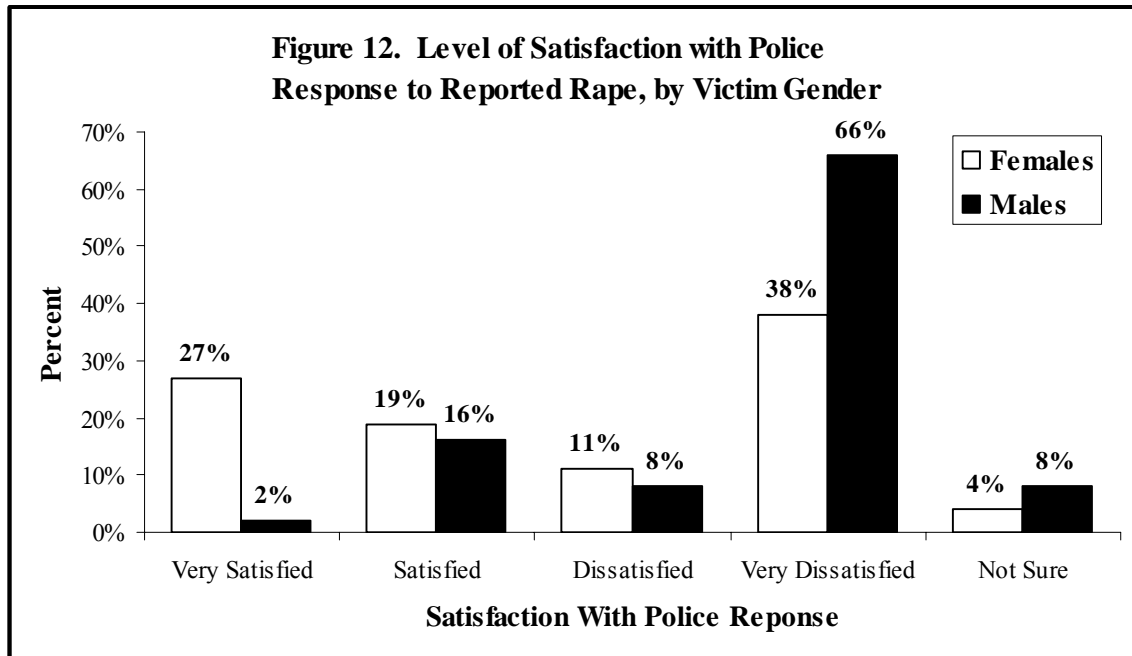

Of the *male* victims that reported their rape to police, 47% resulted in a suspect arrest. However, since only 6% of male rape victims reported their rapes to police, this represents only 3% of all cases of male rape. Similarly, 37% of female rape victims' cases reported to police resulted in a suspect arrest. However, since only 19% of female rape victims reported their rapes to police, this represents only 7% of all cases of female rape.

### 12. Rape Victims' Satisfaction with Police Response to A Reported Rape

In general, half (51%) of rape victims were *dissatisfied*, 40% of these *very dissatisfied*, with the way the police handled their rape cases. Conversely, 19% of rape victims were *satisfied* and 25% *very satisfied* with the way the police handled their rape cases. When examined by gender, significantly more *male* rape victims (66%) than female rape victims (38%) were *very dissatisfied* with the way the police handled their rape cases. See **Figure 12**.

When rape victims were asked what else the police should have done to help them, one-third (36%) reported *nothing*. Of those that wanted more done by police, 18% wanted the police to *charge/arrest/commute offender or keep offender locked up*. Another 13% wanted the police to *take a report/follow through with an investigation/question offender*. Yet another 15% were *not sure* what else the police should have done.

When examined by gender, twice as many *females* (37%) than males (18%) reported that there was *nothing* else they wanted the police to do. Significantly more *males* than females wanted the police to *take the complaint more seriously/believe them/not laugh at them* (19% vs. 3%) and to be *referred/took to services/shelter* (8% vs. 3%). Significantly more *females* wanted the *offender charged/arrested/commuted/kept locked up* (19% vs. 0%) and wanted to *know how to protect themselves/have surveillance provided* (6% vs. 0%). See **Table 3**.

### 13. Rape Victims and The Courts

#### a. Obtaining A Restraining Order

Of all rape victims identified in the statewide survey, 10% *obtained a restraining order* against their offender. When examined by gender, 3% of male rape victims and 11% of female rape victims obtained a restraining order.

#### b. Violating A Restraining Order

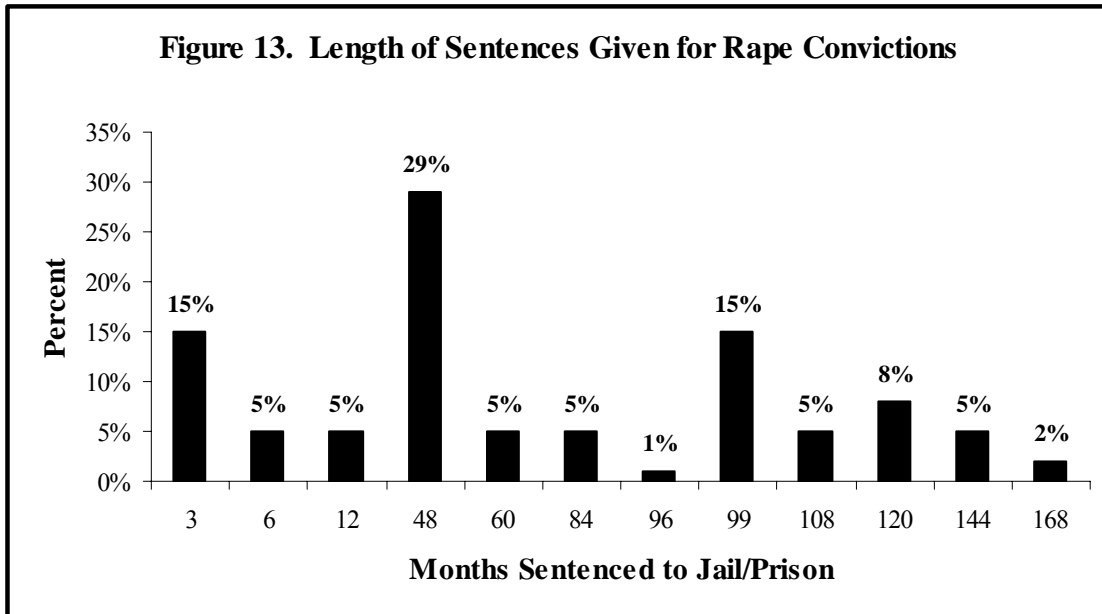

Almost half of the victims (49%) reported that the *restraining order was violated by the offender*. When examined by gender, half (52%) of *male* rape victims and 49% of *female* rape victims reported that the restraining order was violated by the offender.

#### c. Criminal Charges and Dispositions

Six percent of rape victims *filed criminal charges against the offender*. One-quarter (25%) of the rape victims that filed criminal charges reported that their *charges were dropped*; 6% reported that the *offender was acquitted*; 45% reported that the *offender was convicted*; and 11% reported that the *offender entered a guilty plea*. Of those that were convicted or pled guilty,

88% were sentenced to jail or prison and the average sentence was 62.5 months. However, over half (54%) of the guilty offenders obtained a sentence of 48 months or less. See **Figure 13**.

When examined by gender, more *female* rape victims (7%) filed criminal charges than male rape victims (1%). Because so few *male* rape victims in the survey population filed rape criminal charges, no comparison in dispositions could be made by victim gender.

d. Satisfaction with the Court Process

When rape victims were asked how satisfied they were with the way they were treated during the court process, half (53%) reported that they were *satisfied*, 15% of these *very satisfied*, with the court process. One-third (34%) reported being *dissatisfied*, 25% of these *very dissatisfied*, with the court process and 12% were *not sure*.

## **SECTION TWO: Analysis of 2005 Sex Crimes Data from the Central Repository**

### **I. ABOUT THE CENTRAL REPOSITORY**

The Central Repository is supported by the State of New Mexico Department of Health, Office of Injury Prevention and Behavioral Health Services Division and the Violence Against Women Act. It was established in 1998 to house data submitted from a variety of agencies statewide (law enforcement, district and magistrate courts, and domestic violence service providers) that deal with the issue of domestic violence. In 2001, the Central Repository began capturing statewide sexual assault data, as well. To this end, sexual assault data from law enforcement agencies and the courts, as well as data from rape crisis centers, mental health centers, and SANE Programs that provide services for sexual assault victims, are also submitted to the Central Repository.

Data from all district and magistrate courts statewide are obtained through the Administrative Office of the Courts. Currently, standardized data from each aforementioned discipline, are submitted to the Central repository on a quarterly basis. The data analyzed for this report covers sexual assault law enforcement, service provider and SANE data for the period 1/1/05 – 12/31/05.

### **II. LAW ENFORCEMENT REPORTED SEX CRIMES**

#### **A. DEFINITIONS**

Sexual assault incidents captured in New Mexico include the following statutes regarding sexual offenses. These statutes are presented in brief. Full definitions are found in **Appendix B**.

#### **30-9-11 Criminal sexual penetration**

A. Criminal sexual penetration is the unlawful and intentional causing of a person to engage in sexual intercourse, cunnilingus, fellatio or anal intercourse or the causing of penetration, to any extent and with any object, of the genital or anal openings of another, whether or not there is any emission.

#### **30-9-12 Criminal sexual contact**

A. Criminal sexual contact is the unlawful and intentional touching of or application of force, without consent, to the unclothed intimate parts of another who has reached his eighteenth birthday, or intentionally causing another who has reached his eighteenth birthday to touch one's intimate parts.

#### **30-9-13 Criminal sexual contact of a minor**

Criminal sexual contact of a minor is the unlawful and intentional touching or applying force to the intimate parts of a minor or the unlawful and intentional causing of a minor to touch one's intimate parts. For the purposes of this section, "intimate parts" means the primary genital area, groin, buttocks, anus or breast.

### **30-9-14 Indecent exposure**

- A. Indecent exposure consists of a person knowingly and intentionally exposing his primary genital area to public view. As used in this section, “primary genital area” means the mons pubis, penis, testicles, mons veneris, vulva or vagina.

### **30-10-3 Incest**

Incest consists of knowingly intermarrying or having sexual intercourse with persons within the following degrees of consanguinity: parents and children including grandparents and grandchildren of every degree, brothers and sisters of the half as well as of the whole blood, uncles and nieces, aunts and nephews.

### **30-9-1 Enticement of child**

Enticement of child consists of:

- A. Enticing, persuading or attempting to persuade a child under the age of sixteen years to enter any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 (30-9-1 to 30-9-9 NMSA 1978) of the Criminal Code; or
- B. Having possession of a child under the age of sixteen years in any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 of the Criminal Code.

### **30-6A-2 Sexual Exploitation of Children**

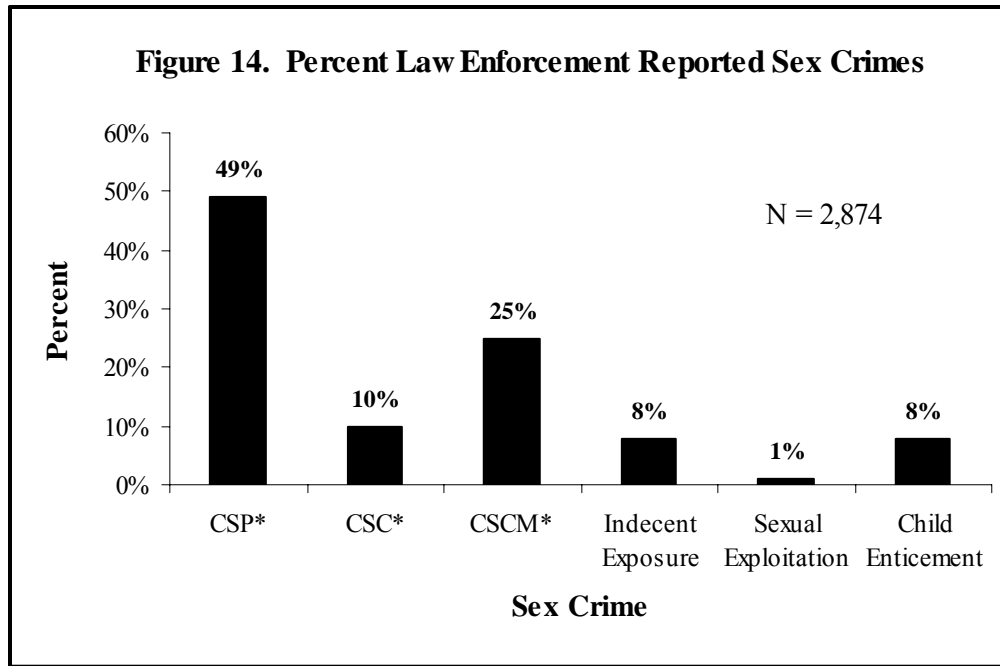

- A. and B. It is unlawful for any person to intentionally *possess* or *distribute* any visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts any prohibited sexual act or simulation of such act and if that person knows or has reason to know that one or more of the participants in that act is a child under eighteen years of age.
- C. It is unlawful for any person to intentionally cause or permit a child under eighteen years of age to engage in any prohibited sexual act or simulation of such an act if that person knows, has reason to know or intends that the act may be recorded in any obscene visual or print medium or performed publicly.
- D. It is unlawful for any person to intentionally manufacture any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if one or more of the participants in that act is a child under eighteen years of age.

### **B. LAW ENFORCEMENT REPORTED INCIDENCE OF SEXUAL ASSAULT**

There were 99 law enforcement agencies that submitted sexual assault data to the Central Repository during 2005 (see **Appendix C**). Presently, these agencies represent 94% of the New Mexico population. Data from each participating agency was extracted from police offense incident reports and submitted in aggregate form on the standardized *Law Enforcement Sexual Violence Data Collection Form* (see **Appendix D**).

## 1. All Law Enforcement Reported Sex Crimes

In 2005, there were 2,874 sex crimes reported by participating law enforcement agencies. For a list of sex crime reports by law enforcement agency, see **Table 4**. For a list of sex crime reports by county, see **Table 5**. Of the reported sex crimes, 49% (1,400) were cases of *criminal sexual penetration*, 25% (711) *criminal sexual contact of a minor*, 10% (281) *criminal sexual contact*, 8% (221) *indecent exposure*, 8% (232) *child enticement* and 1% (29) *sexual exploitation*, see **Figure 14**.

CSP = Criminal Sexual Penetration  
CSC = Criminal Sexual Contact  
CSCM = Criminal Sexual Contact of a Minor

## 2. Law Enforcement Reported Criminal Sexual Penetration (Rape) Incidents

The number of criminal sexual penetration (rape) cases per county that were reported to law enforcement in 2005 is shown in **Appendix E**. As expected considering the size of their respective populations, the *rate* of law enforcement reported *criminal sexual penetration* (LER-CSP) incidents in New Mexico was calculated based on counties with complete reporting (those counties with the law enforcement agency from the largest city(s) reporting). The rate of law enforcement reported criminal sexual penetration for New Mexico is .76 per 1000 persons, which is similar to the .77 rate reported in 2004.

The 1,400 law enforcement reported rapes in 2005 represent rapes among persons of all ages in New Mexico. The 5,320 victims in 2005 identified by the statewide survey represent only rapes perpetrated on those 17 and older. Therefore, the total number of rapes from all age groups that came to the attention of law enforcement (1,400) is equal to 1 in 4 of the number of adult rape victims identified by the survey (5,320).

## C. CHARACTERISTICS OF CRIMINAL SEXUAL PENETRATION CASES

### 1. Type of Criminal Sexual Penetration

Of the 1,400 cases of criminal sexual penetration (CSP), the type of penetration was specified in 444. Of these, 31% (138) were *sodomy*, 19% (84) were with an *object*, and 50% (222) met the statutory definition of *incest*.

### 2. Victim and Offender Gender

There were 131 criminal sexual penetration cases from 40 agencies that did not document the *number of victims* involved. Of the 1,269 cases that did document the number of victims, 1,366 victims were identified. Victim *gender* was documented in 1,338 of these cases. Of these, 1,143 (85%) were *female* victims and 195 (15%) *male* victims.

Of the 1,400 cases of criminal sexual penetration, 1,234 cases documented the number of offenders involved. Of these cases, 1,243 offenders were identified. The ratio of offenders to CSP reported cases overall, was 1 to 1, meaning for every one case of criminal sexual penetration, there was approximately one offender identified.

Of the 1,201 CSP reports identifying the gender of the offender, 93% (1,115) had a *male* offender.

### 3. Victim and Offender Age

Of the 1,006 reports of criminal sexual penetration that identified *victim age*, the greatest proportion of all victims were in the age group *13-18* (26%), followed by victims age *7-12* (18%) and victims *0-6* and *19-25*, with 15%, respectively. Conversely, of the 688 reports that identified *offender age*, the greatest proportion of all offenders were in the age group *19-25* (28%), followed by offenders *36-45* (19%) and *26-35* (18%). See **Figure 15**.

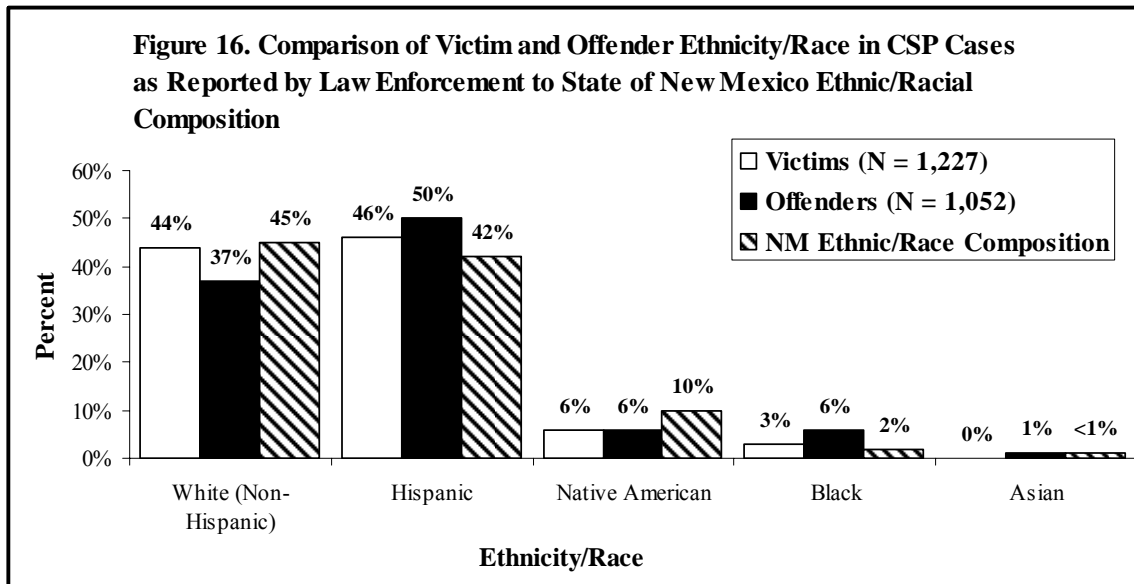

### 4. Victim and Offender Ethnicity/Race

Of the 1,227 CSP cases that identified *victim ethnicity/race*, 46% (567) were *Hispanic*, 44% (543) were *White (non-Hispanic)*, 6% (78) *Native American*, 3% (34) *Black*, and 0% (5) *Asian*. Likewise, of the 1,052 CSP cases that identified *offender ethnicity/race*, 50% (529) were *Hispanic*, 37% (392) *White (non-Hispanic)*, 6% (61) *Native American*, 6% (61) *Black*, and 1% (9) *Asian*. For a comparison of victims and offender ethnicity/race to ethnic/racial compositions in New Mexico, see **Figure 16**. As illustrated, *Hispanics* have greater representation among victims and offenders than their representation in the New Mexico population. *Blacks* have a significantly greater representation among offenders and slightly higher representation among victims than their representation in the New Mexico population. *White (non-Hispanics)* have greater representation among victims than their representation in the New Mexico population. *Native Americans* have less representation among victims and offenders than their representation in the New Mexico population.

**Figure 15. Victim and Offender Age as Reported by Law Enforcement**

**Figure 16. Comparison of Victim and Offender Ethnicity/Race in CSP Cases as Reported by Law Enforcement to State of New Mexico Ethnic/Racial Composition**

## 5. Victim/Offender Relationship

The *victim/offender relationship* was not documented in 562 of the 1,400 reported cases of criminal sexual penetration. Of the 838 cases of CSP where *victim/offender relationship* was documented, 12% (99) were perpetrated by a *stranger* to the victim and 88% (739) were perpetrated by someone *known* by the victim.

All of the cases for almost half (47%) of the law enforcement agencies reporting criminal sexual penetration crimes, involved a *known* offender. See **Table 6**. There were 739 cases which documented whether or not the known perpetrator was a *relative*. Of these, 30% (225) were *relatives*.

While law enforcement agencies report whether the offender was a stranger or known to the victim, they do not further report the *type of relationship* among *known* offenders. However, such documentation is available from Bernalillo County in the reported cases of criminal sexual penetration submitted by the *Albuquerque Police Department* and the *Bernalillo County Sheriff's Office*. Of the 484 cases of criminal sexual penetration reported by law enforcement agencies in Bernalillo County, the *victim/offender relationship* was documented in 467 cases. Of these, 36 (8%) were perpetrated by a *stranger* and 431 (92%) by *someone known* to the victim. Of those known to the victim, 121 (28 %) were a *relative* of the victim. **Figure 17** illustrates the percent of each type of *victim/offender relationship*.

Among specified *known* offenders, *acquaintances* (27%) comprised the greatest number, followed by *boyfriends/girlfriends* (13%). “*Other*” *known* offenders comprised the greatest number of *unspecified* offenders (15%). Among *known-relative* offenders, a *parent* was the perpetrator in 6% of cases, *step-parent* in 3%, and *grandparent* in 1% of cases. *Siblings* were the perpetrator in 3% of cases. *Spouses* were the perpetrator in 1% of cases, and “*Other*” family members in 10% of cases. Refer to Figure 17.

## 6. Weapon Use and Injury

There is a parallel between weapon use in sexual assault incidents and its use in domestic violence incidents, though there is a reluctance among professionals in the field of sexual violence prevention and prosecution to report this observation. Because the intent in a domestic assault or battery is to physically harm the victim, an offender's fists and feet used in kicking, slapping, or punching a victim are considered “personal weapons”. Applying this liberal definition of a *weapon* to CSP crimes would result in 83% or 509 of 613 cases in New Mexico, involving a weapon. However, while this demonstrates comprehensive and accurate reporting, there is great reluctance in reporting such high rates of weapon use in sexual assault incidents. Sexual assault advocates and prosecutors have been working for years to dispel the long held social myth that unless there is a “non-personal” or deadly weapon involved, the victim consented too easily and must have freely engaged in the sexual activity. In truth, a very small proportion of CSP cases nationally, involve a “non-personal” weapon, such as a gun, knife, bat, etc. The same is true in New Mexico, as only 2% or 10 of 481 cases documenting *type of weapon used* involved “non-personal” weapons.

While it is most appropriate to include “personal weapons” in a weapon count in sex crimes and in domestic violence crimes, it is crucial to argue that sexual assault victims are raped, i.e. forced against their will, even without the presence of a weapon of *any* kind. The law states clearly, that just the presence of a *threat* of physical harm that the victim believes can be

presently executed, is all that is required to demonstrate force or coercion. The requirement of “personal”, “non-personal” and/or deadly weapon-use to justify that victim resistance occurred during a sexual assault incident must be eliminated.

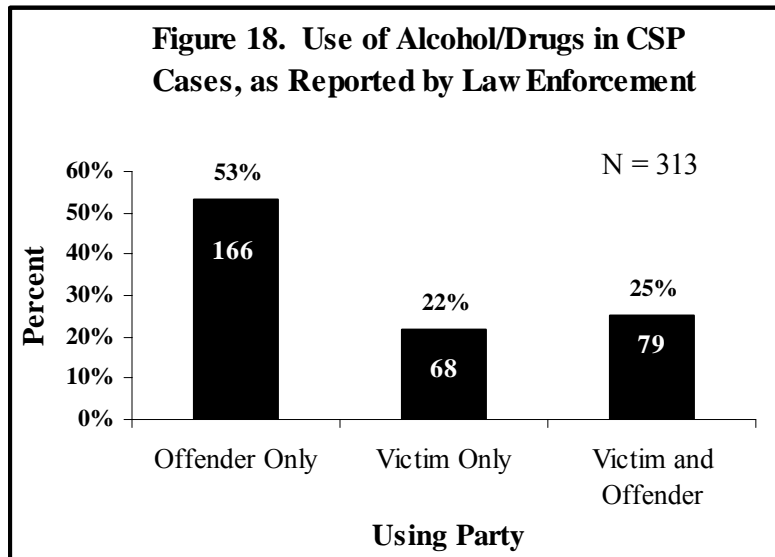

Of the 700 cases that documented whether the victim was injured, victim injury occurred in 29% (202) of the cases.

## 7. Alcohol and Drug Use

There were 807 cases of CSP where *alcohol/drug use* was documented. Of these, alcohol and/or drugs were used in 43% (345) of cases. Of the 345 cases where alcohol or drugs were used, 313 documented the using party(s). *Offender-only* use of alcohol/drugs was reported in 53% (166) of cases. *Victim-only* use was found in 22% (68) of cases, and both the *victim and offender* used alcohol/drugs in 25% (79) of cases. See **Figure 18**. The total cases then, in which *offenders* used alcohol/drugs was 78% compared to the total cases in which *victims* used alcohol/drugs, which was 47%.

## 8. Children Witnesses to Criminal Sexual Penetration

When analyzing data regarding children, two variables are analyzed: 1) the *number of incidents* that at least one child was present; and 2) the total *number of children* present. In 2005, 99 law enforcement agencies reported to the Central Repository. Of these, 88 reported at least one case of criminal sexual penetration but 47 of these agencies did not report how many incidents had children present, or how many total children were present during their reported CSP incidents. There were 148 cases that documented the *number of incidents* where at least one child was present. Of these, 41 (28%) cases had at least one child present. There were 80 children present at these 41 incidents, or 1.95 children per incident. There were 815 reports that documented the *total number of children present*. Of these, the total number of children present was 216 (a number that represents 26.5% of the number of CSP reports).

Of the 216 children present during the CSP incidents, the age of the child was documented in 208. Of these 19% (39) were age 0-5; 19% (39) 6-9; 10% (21) 10-12; 26% (54) 13-17; and 26% (55) 18-21. See **Figure 19**.

## 9. Suspect Arrests for Criminal Sexual Penetration Incidents

There were 777 cases of criminal sexual penetration that documented whether there was a suspect arrest. Of these, 137 (18%) cases had a suspect arrest. Among agencies with 10 or more

reported CSP cases, the *Las Vegas Police Department* had the most incidents with a suspect arrest at 38% or 5 of 13 reported cases, followed by the *Alamagordo Police Department*, 36% or 5 of 14 cases, and the *Gallup Police Department* 33%, or 5 of 15 cases. See **Table 7**.

#### D. CHARACTERISTICS OF OTHER LAW ENFORCEMENT REPORTED SEX CRIMES

While participating law enforcement agencies throughout the state report on the number of *non-penetration* sex crimes, including *criminal sexual contact*, *criminal sexual contact of a minor*, *indecent exposure*, *sexual exploitation*, and *child enticement* cases, they do not provide *details* about the nature of these crimes. However, data are available from the Albuquerque Police Department and the Bernalillo County Sheriff’s Office that assist in characterizing these *non-penetration* crimes.

##### 1. Victim and Offender Gender

There were 474 non-penetration sex crimes in Bernalillo County. There were 504 victims identified in these crimes. Victim *gender* was documented in 491 of the victims identified. Of these, 79% were female. This is less than the 85% of female victims in criminal sexual penetration (CSP) crimes. There were 413 offenders identified in the non-penetration sex crimes. The suspect gender was documented in 409. Of these, 93% (382) were male. This equals the 93% of male offenders in CSP crimes.

##### 2. Victim and Offender Age

The *victim age* was documented in 268 of the 474 victims identified in Bernalillo County sex crimes. Of these, 89% were not yet adolescents: 40% were age 0-6 and 49% were age 7-12. Another 6% of victims were age 13-18, 1% were age 19-25, and 2% were age 26-35. See **Figure 20**. *Offender age* was documented in 73 of the 413 offenders identified. Of these, 26% were age 7-12, and 16% were 13-18. Offenders 19-25 and 46-55, comprised 11% of all offenders

of non-penetration crimes, respectively. Offenders 36-45 comprised 10% percent of all offenders, followed by offenders 26-35 (8%) and 56-65 (7%). Five percent of offenders of non-penetration sex crimes were 0-6 and 66 and over, respectively. Refer to Figure 20.

### 3. Victim and Offender Ethnicity/Race

Victim and offender *ethnicity/race* variables from the Albuquerque Police Department and the Bernalillo County Sheriff’s Office shared records database were unreliable. Since this shared database is the only one that captures specifics on *non-penetration* sex crimes, no other ethnicity/race data on these crimes were available for analysis.

### 4. Weapon Use and Injury

Bernalillo County law enforcement agencies reported 82% or 391 cases out of 474 *involved a weapon*. However, among these non-penetration cases, there was only 1 report which included a “non-personal” or deadly weapon. Although 29% of *CSP* cases involved injury, only 9% (44) of *non-penetration* sex crimes involved injury.

### 5. Alcohol/Drug Use

Similar to the injury findings, while 43% of *CSP* cases involved alcohol/drug use, only 14.5% of *non-penetration* cases involved alcohol/drug use.

### 6. Children Witnesses to Non-Penetration Sex Crimes

There were 46 children who witnessed an unknown number of the reported 474 non-penetration sex crimes (the number of *incidents* which had a child present was not documented, only the total number of children present for all incidents). Of these, 46% (21) were age 0-5, 26% (12) were 6-9, and 9% (4) were age 10-12. See **Figure 21**. A comparison of the age of children present at *CSP* crimes versus non-penetration sex crimes, illustrates that more (81%) young children (< 13 years of age), were present during *non-penetration* crimes compared to the proportion (48%) present during *criminal sexual penetration* crimes. Refer to Figure 19.

#### 7. Suspect Arrest in Non-Penetration Sex Crimes

Of the 474 *non-penetration* sex crimes in Bernalillo County, there was no arrest made in 423 or 89%. This is higher than the 82% of *CSP* crimes where no arrest was made.

### III. SEXUAL ASSAULT SERVICE PROVIDERS AND REPORTED SEX CRIMES

There were 29 sexual assault service provider agencies that submitted data to the Central Repository in 2005 (see **Appendix F**). Therapists from participating agencies complete the *Sexual Assault History* form, a standardized data collection instrument used by mental health and rape crisis centers throughout New Mexico to capture information on each client who presents for therapy for a recent or past sexual offense (see **Appendix G**). The data presented herein represent clients who presented for therapy between 1/1/05 and 12/31/05 for a recent or past sexual assault. Completed *Sexual Assault History* forms are submitted to the Central Repository on a monthly basis. There were 1,545 clients who received services for a sexual assault victimization. This represents a 14% decrease from that reported in 2004. Completed forms on these survivors were analyzed for this report.

The *Albuquerque Rape Crisis Center* served 33% (518) of all sex crimes survivors seen in 2004, followed by *La Pinon Sexual Trauma Recovery (Las Cruces)* 162 (10.5%), *Santa Fe Rape Crisis Center* 125 (8%) and *Sexual Assault Services of North West New Mexico* 113 (7%). See **Table 8**. For an examination of survivors served by county, see **Table 9**.

It is difficult to make a meaningful comparison between the number of sexual assault cases reported by *service providers* per county and the number of sex crimes reported by *law*

*enforcement* per county because only 60% of all survivors who sought treatment in 2005 experienced the sexual assault in 2005. However, one may make a comparison simply based on a 12 month interval basis, i.e. in the same period of time that law enforcement reported 2,874 sex crimes, therapists served 1,545 survivors. The number of survivors seen represents 54% of the number reported by police in the same time frame. See **Table 10**.

**A. SURVIVOR DEMOGRAPHICS**

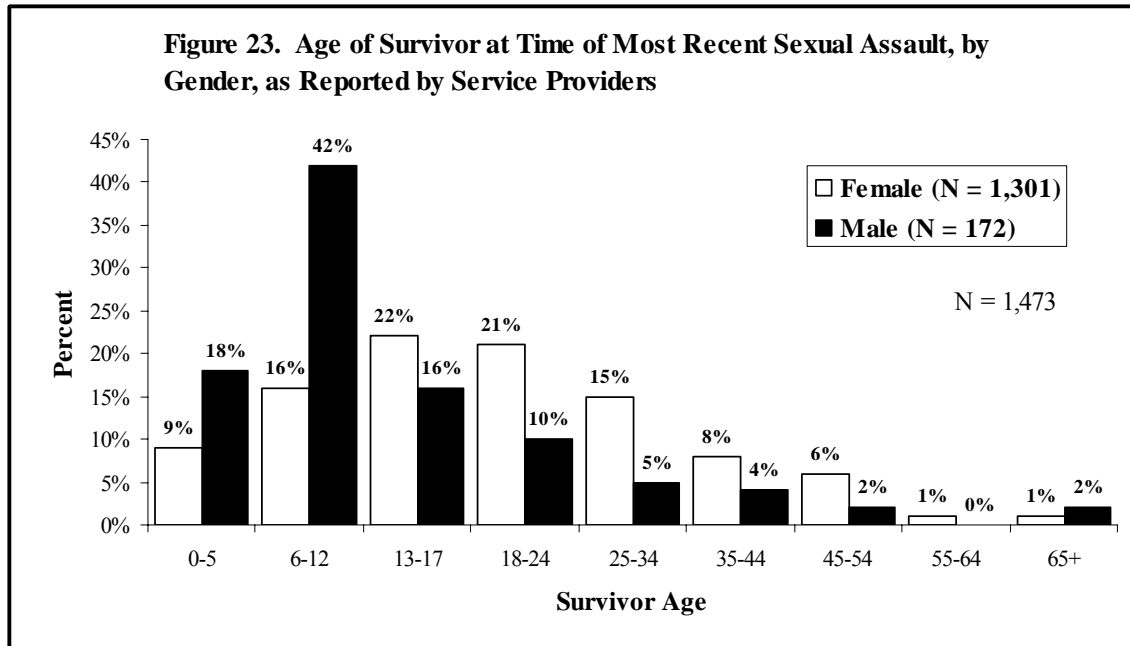

**1. Gender of Survivor**

Of the 1,545 sexual offense reports, 1,529 documented the *gender of the survivor*, 88% (1,346) of which were *female*. This is lower than the 91% of female survivors of sexual offenses reported nationally (Bureau of Justice Statistics, Sex Offenses and Offenders, 1997). *Southern New Mexico Human Development, Inc.* (27%) served the most males among survivors served followed by *The Counseling Center Alamogordo* (24%) and *Santa Fe Rape Crisis Center* (21%). See **Table 11**.

**2. Age of Survivor At Time of Current (Presenting) Sexual Assault**

Of the 1,484 reports where *age of survivor at the time of the current assault* was documented, the greatest percentage of victimizations occurred between the ages of 13 and 17 (21%), followed closely by victimizations occurring from ages 6-12 (20%). See **Figure 22**. A comparison of *age at the time of the current sexual assault* between males and females reveals that more *males* (76%) of all males assaulted, were victims before age 18, compared to the percent of females among female survivors who were assaulted before age 18 (47%). See **Figure 23**.

Since there is a significant difference between genders with regard to the age of the survivor at the time of the most recent assault when examining all types of assault, an analysis was conducted to compare the age of survivor for males and females between criminal sexual penetration crimes and non-penetration sex crimes.

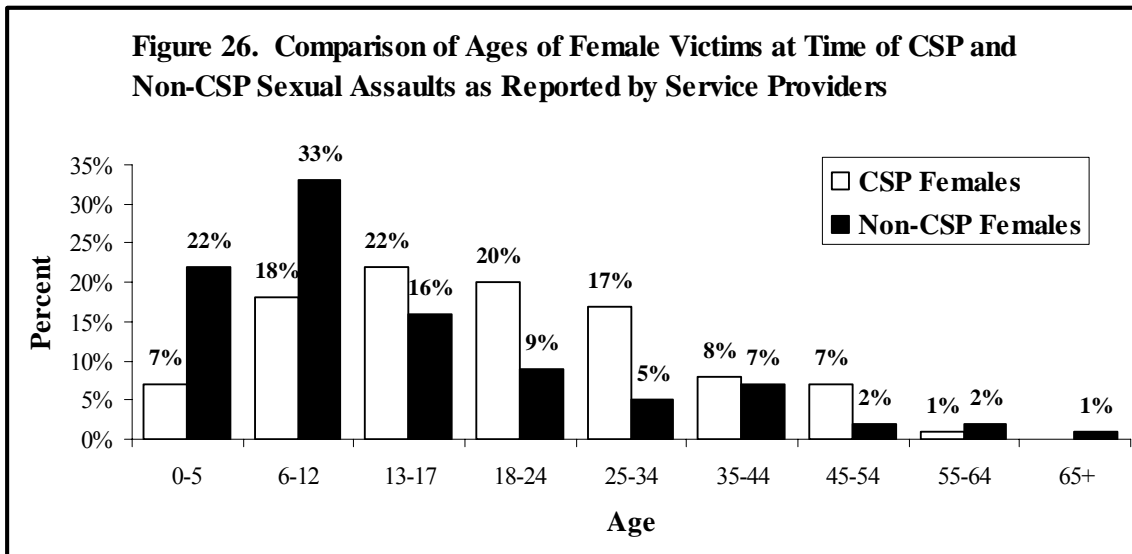

In *criminal sexual penetration crimes*, the proportion of *male children* raped (68%) among all males who were raped is significantly more than the proportion of *female children* raped (25%) among all females who were raped. Beyond age 12, a greater proportion of *females* than males were raped in every age group. See **Figure 24**.

Similarly, in *non-penetration sex crimes* (criminal sexual contact, criminal sexual contact of a minor, sexual exploitation, child enticement, indecent exposure) the proportion of *male children* victimized (70%) among all males victimized is also significantly greater than the proportion of female children victimized (56%) among all females victimized. See **Figure 25**.

An examination of *female* sexual assault victims of *criminal sexual penetration* and *non-penetration sex crimes* shows that a greater proportion of female victims experience non-penetration sex crimes as children (age 12 and under) 55% than criminal sexual penetration (25%), but they experience criminal sexual penetration at higher rates in all other age groups until the age of 55. See **Figure 26**.

An examination of *male* sexual assault victims of *criminal sexual penetration* and *non-penetration sex crimes* shows that a greater proportion of male victims experience non-penetration sex crimes before the age of 6 (23%), than criminal sexual penetration (15%), but

they experience more criminal sexual penetration at higher rates in virtually all other age groups. See **Figure 27**.

### 3. Age of Survivor At Presentation For Therapy

The *age of the survivor when presenting for therapy* was documented in 1490 (96%) of the sexual offenses reported. Of these cases, the age groups with the most presentations was 25-34 and 18-24 with 19%, respectively, closely followed by the age group 13-17 (16%). There was a slightly greater representation by those 35-44 (13%) than those 45-54 (11%). See **Figure 28**.

*Males* presented for therapy most often during the ages of 6-12 (20%), followed closely by the ages 25-34 (15%) and 13-17 (14%). *Females* presented for therapy most often between the ages of 18-24 and 25-34 (20%, respectively), followed by 13-17 (16%). See **Figure 29**.

The 2005 sexual assault reports from service providers were analyzed to determine the proportion of victims who sought therapeutic services for their sexual assault within one year of the assault, and the proportion of victims who waited longer than one year. While almost two-thirds (63%) of male victims and half (48%) of *female* victims sought therapy within one year of their sexual assaults, after one year, more males (23%) and females (13%) were likely to wait over 20 years to seek services than any other length of time. See **Figure 30**.

#### 4. Survivor History of Prior Sexual Assault/Abuse

Prior sexual assault/abuse was documented in 1,206 service provider reports. Of these, 426 (35%) were sexually assaulted prior to the current assault. The age of the survivor at the time of the prior assault was documented in 318 of the 426 cases. Of these, 193 were survivors who were victims of *on-going sexual abuse*. The age at onset of abuse is shown in **Figure 31**. Eighty-four percent of these prior victimizations occurred by age 12, with the greatest proportion occurring between the ages of birth and 5 years (47%). Of the 125 cases of *isolated prior sexual assault incidents*, 50% occurred by age 12, 18% between the ages of 13 and 17, and 32% were individuals 18 and older. Refer to Figure 31.

#### 5. Ethnicity/Race of Survivor

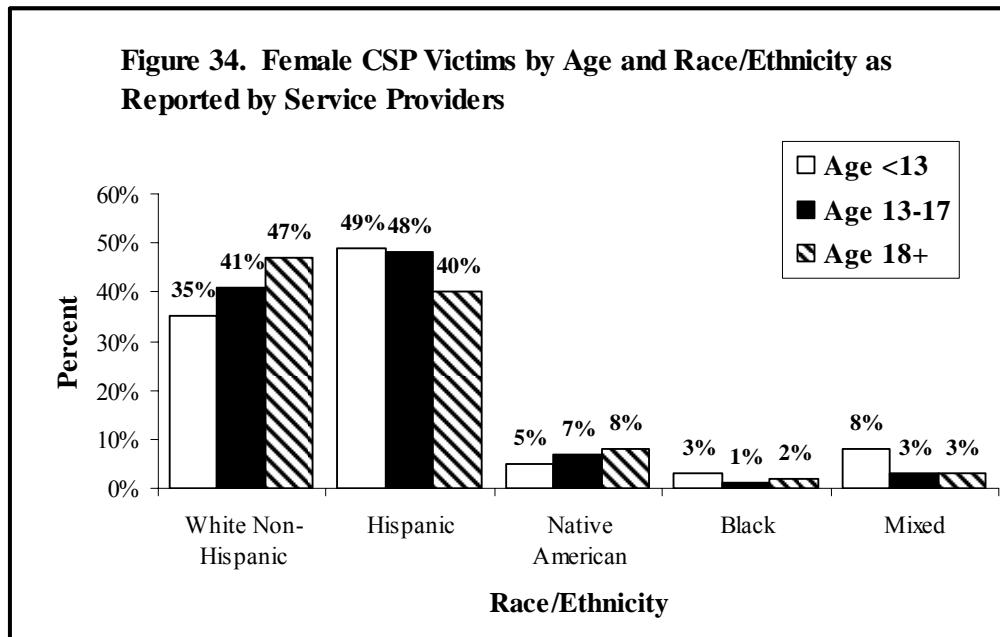

*Ethnicity/race of the survivor* was documented in 1,483 of reported sexual offenses. Forty-one percent of the reported survivors were *White (non-Hispanic)*, 45% were *Hispanic*, 10% were *Native American*, 5% were of *mixed ethnicity*, and 3% were *Black*. For a comparison of these percentages to the ethnic/racial composition of New Mexico, see **Figure 32**.

When *race/ethnicity* was examined among *male rape victims seeking services*, more *White (non-Hispanic)* male rape victims (64%) and victims of *mixed race/ethnicity* (14%) were *adults* (18 and older). Conversely, significantly more *Hispanic* male rape victims (68%) and *Black* victims (2%) were *children 12 and under*; and more *Native American* male rape victims were *adolescents* (ages 13-17), 20%. See **Figure 33**.

When *race/ethnicity* was examined among *female rape victims seeking services*, more *White (non-Hispanic)* female rape victims (47%) and *Native American* victims (8%) were *adults*, while more *Hispanic* (49%) and *Black* (3%) female rape victims and victims of *mixed race/ethnicity* (8%) were *children*. See **Figure 34**.

## 6. Survivor Disability

Of the 998 reports that documented *disability of the survivor*, 31% (301) had a disability. The highest reported disability among the 301 survivors with a disability was *emotional/mental disability prior to the sexual offense incident*, accounting for 233 (77%) of the 301 documented cases of disability. Twenty-three percent (68) of cases reported a *physical disability*: 3% hearing, 1% visual, 2% mobility and 16% non-specified physical disability (see **Figure 35**).

When *disability* was examined among *rape victims*, by *age*, more *adult* (18 and older) rape victims (33%) had a disability than *adolescent* (ages 13-17) victims (27%) or *child* (12 and under) victims (20%). See **Figure 36**.

When *race/ethnicity* was examined among rape victims with a disability, slightly more *White (non-Hispanic)* victims (32%) had a disability than *Native American* rape victims (31%) and victims of *mixed race/ethnicity* (28%). Approximately one-quarter (26%) of *Hispanic* rape victims and 15% of *Black* victims had a disability. See **Figure 37**.

## B. OFFENDER DEMOGRAPHICS

### 1. Gender of the Offender

Of the 1,459 sexual offense cases where *gender of the offender* was documented, 1,394 (95.5%) were *male* and 65 (4.5%) *female*. Among rape cases, the proportion of male offenders was slightly higher, 97%.

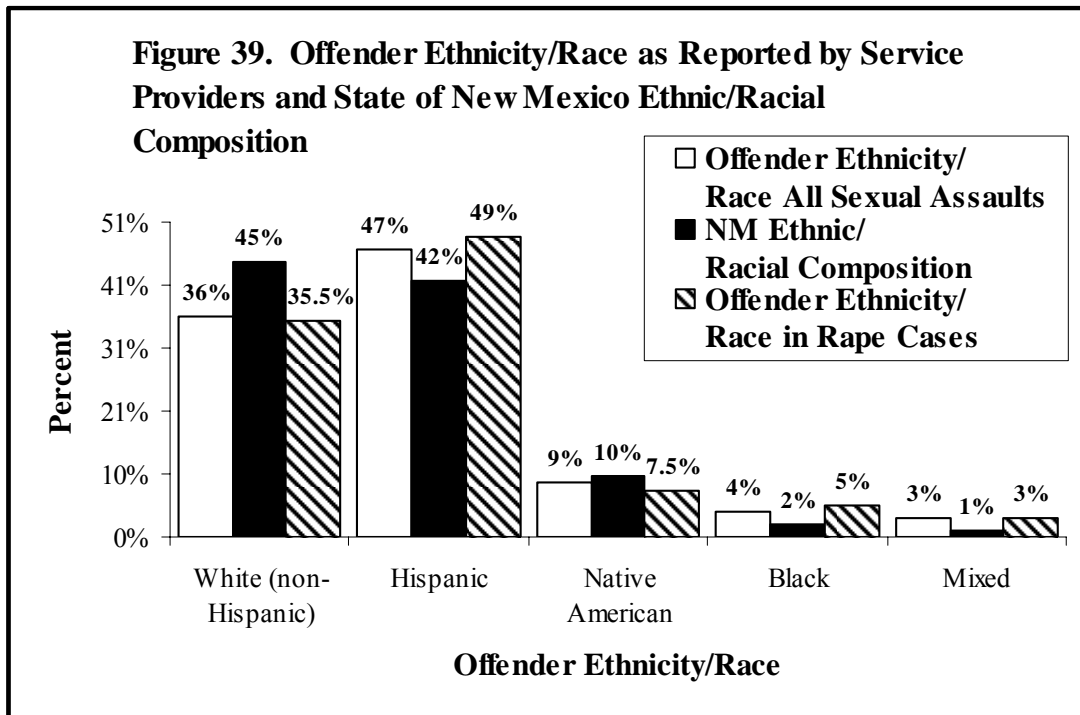

### 2. Age of Offender

*Age of the offender* was documented in 761 of the offense reports submitted. The age group with the greatest number of offenders was 25-34 with 209 reports (27.5%), followed by the 18-24 age group with 146 (19%) offenders. Those offenders 35-44 comprised 17.5% (133) of all offenders. See **Figure 38**. The 18.5% of offenders represented in the <18 age groups are significantly higher than the percent of *single offenders* (10.9%) and *multiple offenders* (4.4%) *younger than 18*, that was reported nationally (Bureau of Justice Statistics, 1997).

### 3. Offender Ethnicity/Race

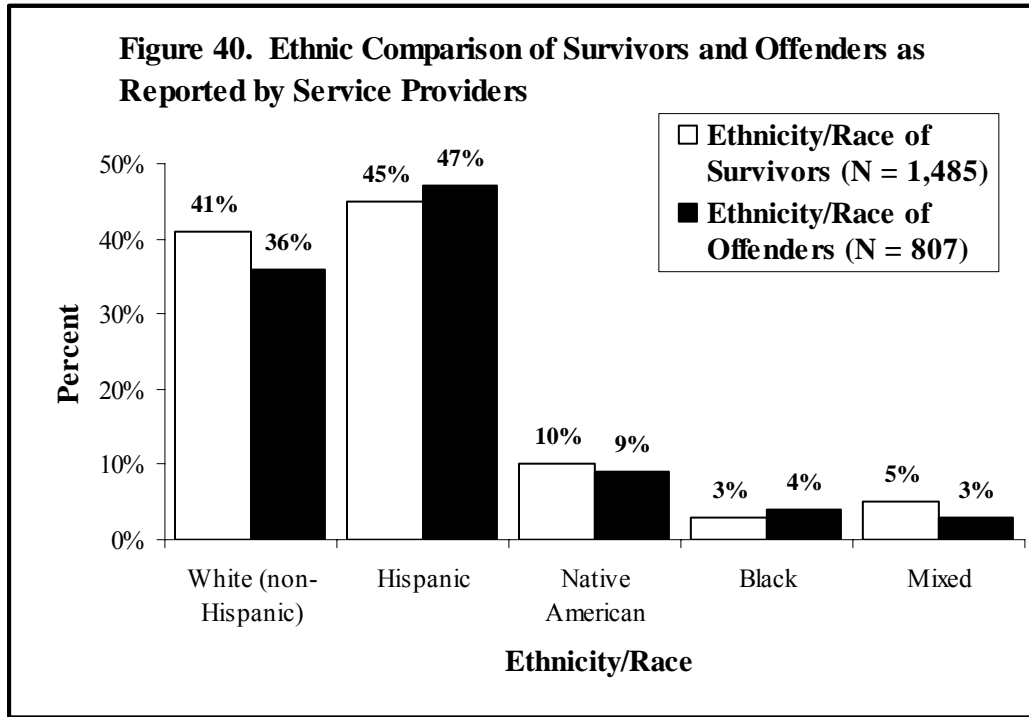

Of the 1,545 reported sexual assault cases, there were 807 cases where *offender ethnicity/race* was documented. Of these, 36% were *White (non-Hispanic)*, 47% *Hispanic*, 9% *Native American*, 4% *Black*, and 3% *mixed ethnicity*. *Black* and *Hispanic* offenders and offenders of *mixed ethnicity* as reported by survivors in therapy, have greater representation than

their representation in the state population. *White (non-Hispanic)* offenders have less representation among offenders than their representation in the state population. See **Figure 39**.

Similarly offender ethnicity among rape cases showed negligible differences in the proportion of each: *White (non-Hispanic)* 35.5%; *Hispanic* 49%; *Native American* 7.5%; *Black* 5%; and offenders of *mixed ethnicity* 3%. Refer to Figure 39.

It is interesting to note that in 79% (767 of 964) of documented cases, the offender was the same ethnicity/race as the survivor. However, an ethnic/racial comparison of offenders and survivors as reported by those who seek services reveals that there are more *Hispanic* and *Black* offenders than *Hispanic* and *Black* survivors and conversely, there are more *White (non-Hispanic)*, *Native American* and *mixed ethnicity* survivors than offenders of each race/ethnicity, respectively. See **Figure 40**.

### C. SEXUAL OFFENSE CHARACTERISTICS

#### 1. Type of Sexual Offense

There were 1,313 sex crimes reported by the 1,151 of the survivors who sought therapeutic services. In 148 of these, the exact nature of the sex crimes was not documented. Of the 1,165 sex crimes that documented the type of offense, 70.5% (378) were *criminal sexual penetration* (CSP – oral, anal, and/or vaginal penetration), 17% (200) *fondling*, 4.5% (52) *sexual harassment*, 2% (21) *stalking*, 3% (39) *criminal sexual contact* and 1.5% (31) *indecent exposure*. See **Figure 41**.

Of the 822 cases involving CSP, 378 did not specify the circumstance of the rape. In the 444 cases of CSP that specified the assault circumstances, *incest* accounted for 59% (264). *Date/Acquaintance rape* comprised 17% (75) of the specified CSP cases. *Spousal rape* comprised 15% (68) of the specified assaults and *gang rape*, 8%. See **Figure 42**.

There were 1,154 sexual assault cases where both the *survivor gender* and *type of offense* were known. When examined by *gender*, a significantly greater proportion of *females* (73%) among female survivors experienced CSP than *males* experienced CSP (56%) among male

survivors. Conversely, a significantly greater proportion of *males* among male survivors experienced *fondling* (26%), *sexual harassment* (8%) and *indecent exposure* (5%), than females experienced *fondling* (16%), *sexual harassment* (4%) and *indecent exposure* (2%) among female survivors. See **Figure 43**.

**2. Survivor/Offender Relationship**

*Survivor/Offender relationship* was documented in 1,488 of the reported cases of sexual assault. In general, 14% (211) were perpetrated by a *stranger* and 86% (1,277) by someone *known to the victim*.

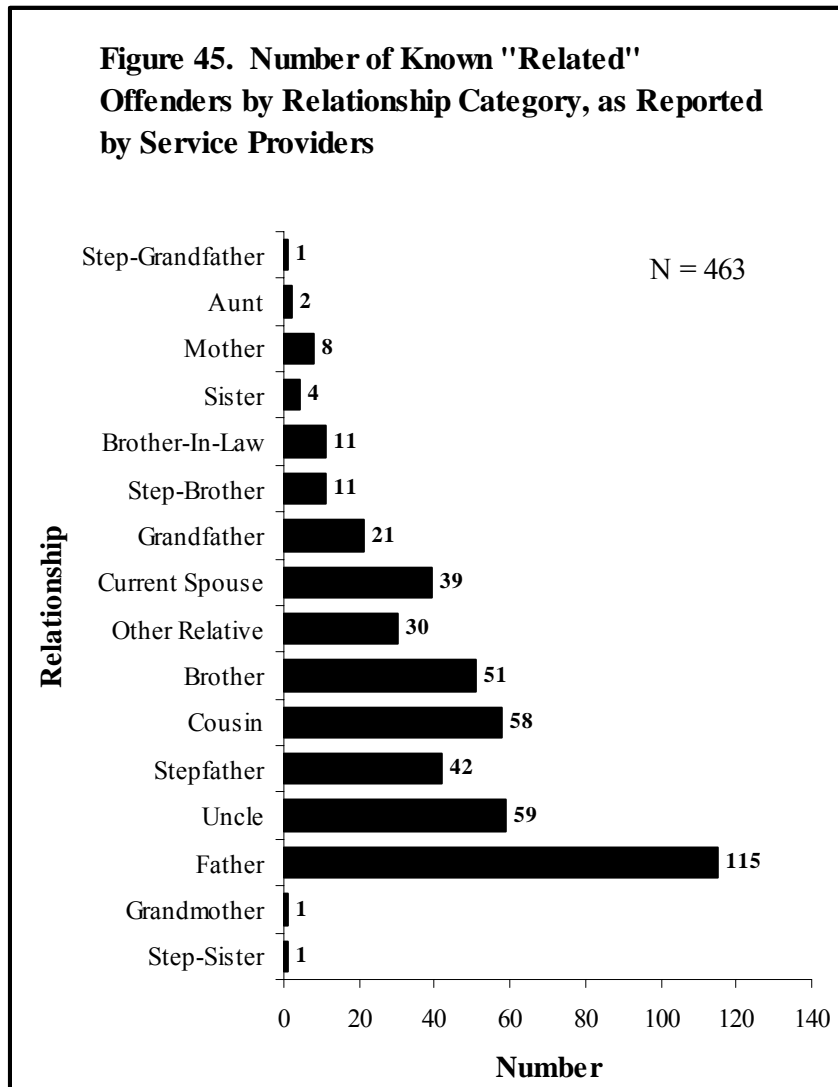

There were 1,437 cases that documented both *stranger-perpetrated* sexual offenses and the *ethnicity/race of the survivor*. Of the 578 cases with *White (non-Hispanic)* survivors, 14% (80) experienced *stranger-perpetrated* sexual assault. Likewise, of the 622 cases with *Hispanic* survivors, 12% (75) experienced *stranger-perpetrated* sexual assault. *Stranger-perpetrated* sexual assault was experienced by 23% (31) of the 133 *Native American* survivors, and by 15% (10) of the 66 survivors of *mixed ethnicity*. There were 38 reports on *Black* survivors that documented the relationship of the offender. Of these, 18% (7) were *stranger-perpetrated* rapes. See **Figure 44**.

There were 1,474 cases that documented both *stranger-perpetrated* sexual offenses and *survivor gender*. Of these documented cases, 174 were *male* survivors and 1,300 *female* survivors. Of the cases with *male* survivors, 10% (18) were *stranger-perpetrated*, compared to 15% (191) of the cases of with *female* survivors.

Of the sexual offenses reported to service providers, 86% (1,207) were committed by someone known to the survivor. Of those offenders *known to the survivor*, 38% (463) were *family members/relatives*.

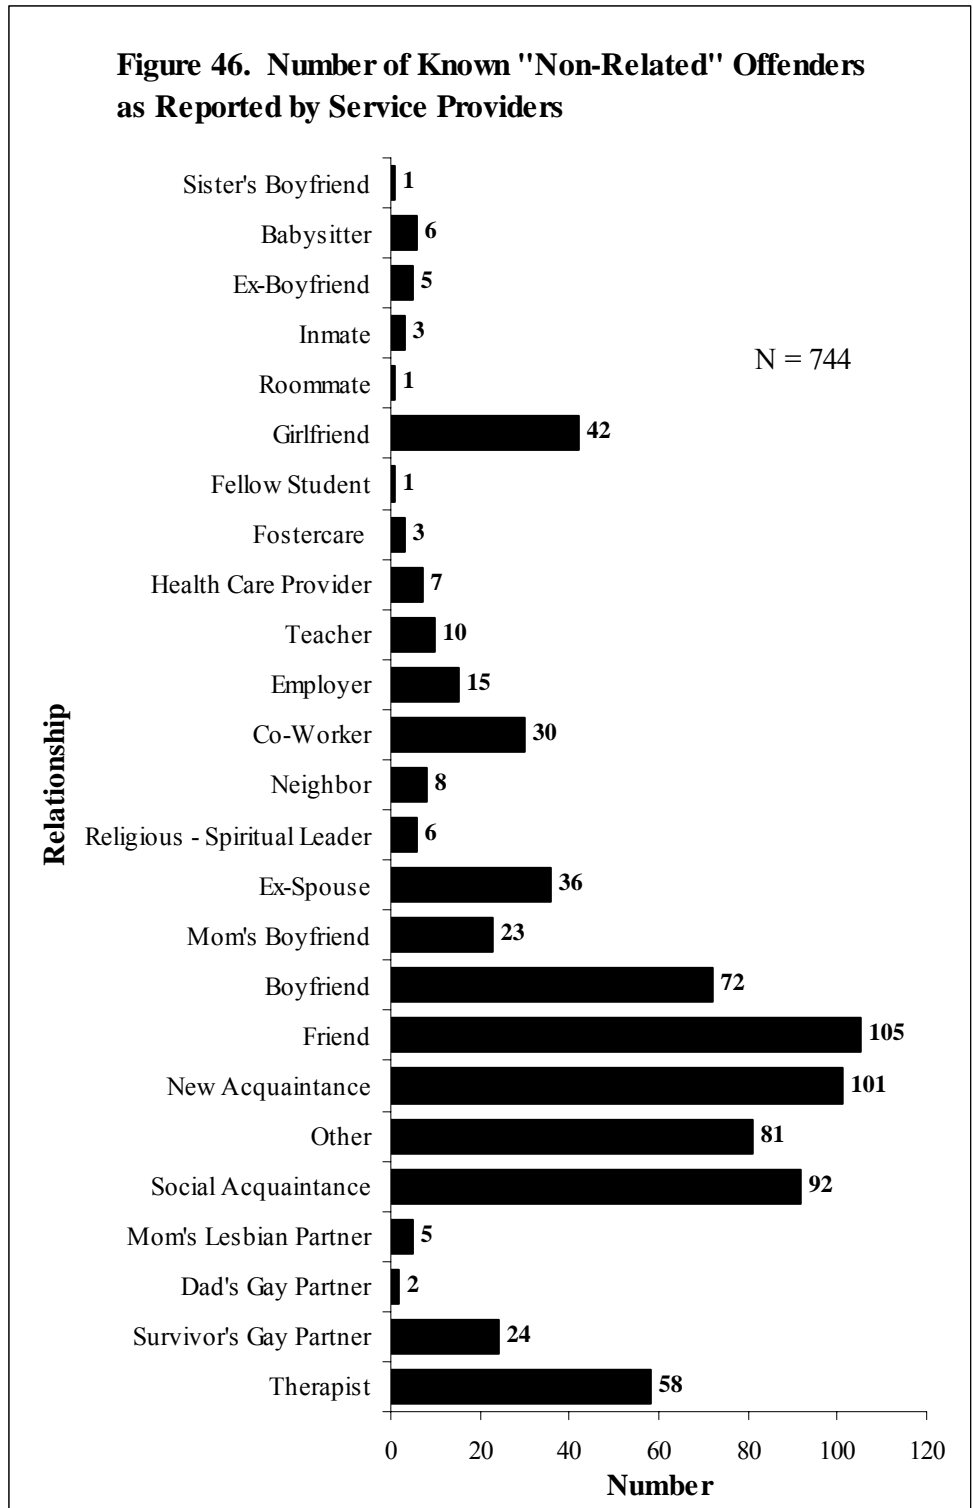

Of the sexual offenses committed by *family members/relatives*, *fathers* were the highest group of reported offenders, committing 115 (25%) of all *family member* sexual offenses. *Uncles* 59 (13%) and *cousins* 58 (12.5%) represented the relatives next most likely to offend, followed by *brothers* 51 (11%), *step-fathers* 42 (9%) and *current spouses* 39 (8%). See **Figure 45**.

Of the 744 *non-family offenders known to the survivor*, friends 105 (14%), new acquaintances 101 (13%), social acquaintances 92 (12%) and boyfriends 72 (10%) comprised half (49%) of these offenders. Therapists comprised the next highest reported category of *known offenders*, committing 58 (8%) of *known offender* sexual offenses. See **Figure 46**.

### 3. Number of Offenders Involved Per Sexual Assault

The *number of offenders* was documented in 1,532 of reported sexual offenses. Of the documented reports, 79% (1,207) involved *one* offender. The 21% of cases involving *multiple*

offenders as reported by therapists, is higher than the 9.4% of *multiple-offender* sexual assaults reported in national victimization surveys (Criminal Victimization in the United States, 1994). Of the *multiple-offender* assaults reported, 7% (113) involved *two offenders*, 3% (42) involved *three offenders*, and 11% (170) involved *four-or-more offenders*.

An examination by *gender* found negligible differences in the number of *multiple-offender* sexual assaults, with the exception of four or more offenders. Twice as many males (18%) were assaulted by four or more offenders than females (9%) See **Figure 47**.

The *number of offenders* per sexual assault was inconclusively correlated with *survivor alcohol use*. There were 1,263 cases that documented both *survivor use of alcohol* and *number of offenders*. Of these, 401 survivors used alcohol and 862 did not. *One-offender* sexual assaults were significantly more common among *non-using alcohol/drug survivors* (85%), than alcohol/drug using survivors (71%). Conversely, *multiple-offender* sexual assaults were more prevalent among *alcohol/drug users* than non-alcohol/non-drug users when *two offenders* were involved (13.5% and 5%, respectively), *three offenders* (5% and 2%, respectively) and *four-or-more offenders* (10.5% and 8%, respectively). See **Figure 48**.

There was no correlation found between the *number of offenders* involved in an assault and the *ethnicity/race of the survivor*.

#### 4. Type of Coercion Used

Because more than one type of coercion was used with some survivors, there were 1,672 reports of coercion in 1,387 reported sexual assaults. Of these, the *type of coercion* used most was *physical force* (36%), followed by *manipulation* (27%), and *verbal threat* (25%). *Weapons* accounted for 4% of the type of coercion used: *knives* (2%), *guns* (1%) and *other weapons* (1%). *Intentional drugging of the victim by the perpetrator* accounted for 3% of the total types of coercion used. See **Figure 49**.

*Physical force* (47%) was used on *adult* (ages 18 and older) victims more than any other type of coercion. *Manipulation* (42%) was used on *child* victims (ages 12 and under) more than any other type of coercion, followed by *verbal threat* (30.5%). *Intentional drugging of the victim by the perpetrator* was used equally and most often on *adolescents* (ages 13-17) and *adults*, (5%, respectively). *Guns* (2%), *knives* (4%) and *other weapons* (2%) were used most on *adult* victims. See **Figure 50**.

When examined by gender, significantly more *females* (40%) experienced *physical force* among female survivors, than *males* experienced *physical force* (24%) among male survivors. Similarly, more *females* experienced *knife use* (2%) among female survivors, than *males* experienced *knife use* (1%) among male survivors. *Males* among male survivors were more likely to experience *manipulation* (37%) and *verbal threat* (32%) than *females* among female survivors (27% and 25%, respectively). Males and females were equally likely to be *intentionally drugged by the perpetrator* (4%), or have a *gun* (1%) or *other weapon* (1%) used during their assault. See **Figure 51**.

## 5. Use of Alcohol/Drugs

### a. Survivor

Of the 1,517 reports that documented *alcohol/drug use*, 24% (367) of survivors used alcohol or other drugs during the reported (current) *assault*. There were 364 of these cases that documented the survivor/offender relationship. Of these 364 cases involving *survivor alcohol/drug use*, 22% were committed by a *stranger*. Conversely, of 1,150 cases where the survivor did not use alcohol/drugs, there were 1,134 that documented the survivor/offender relationship. Of these, 11% were committed by a *stranger*. This suggests that *alcohol/drug use* presents a vulnerability to *stranger* rape: those who use alcohol/drugs are *two times* more likely to experience rape by a stranger than those who avoid alcohol/drugs.

There were 1,242 sexual assault cases where both *survivor alcohol/drug use* and *ethnicity/race* were documented. Of these, *Native American* survivors were most likely to use alcohol or other drugs at the time of their sexual assault, with 50% *Native American* survivors reporting *alcohol/drug use*. Over one-third (38%) of *Black* survivors used alcohol/drugs at the time of their sexual assault, followed by *Hispanic* survivors (31%), *White (non-Hispanic)* survivors (29%) and survivors of *mixed race/ethnicity* (22%). Both *ethnicity/race* and *survivor alcohol/drug use* was documented in too few cases (4) with *Asian* survivors to allow for meaningful analysis. See **Figure 52**.

b. Offender

*Use of alcohol or other drugs by offenders* was documented in only 649 of the 1,545 sexual offense reports. Of these, 66% (429) of offenders *used alcohol or other drugs* during the reported (current) assault.

**6. Location and Time of Sexual Offenses**

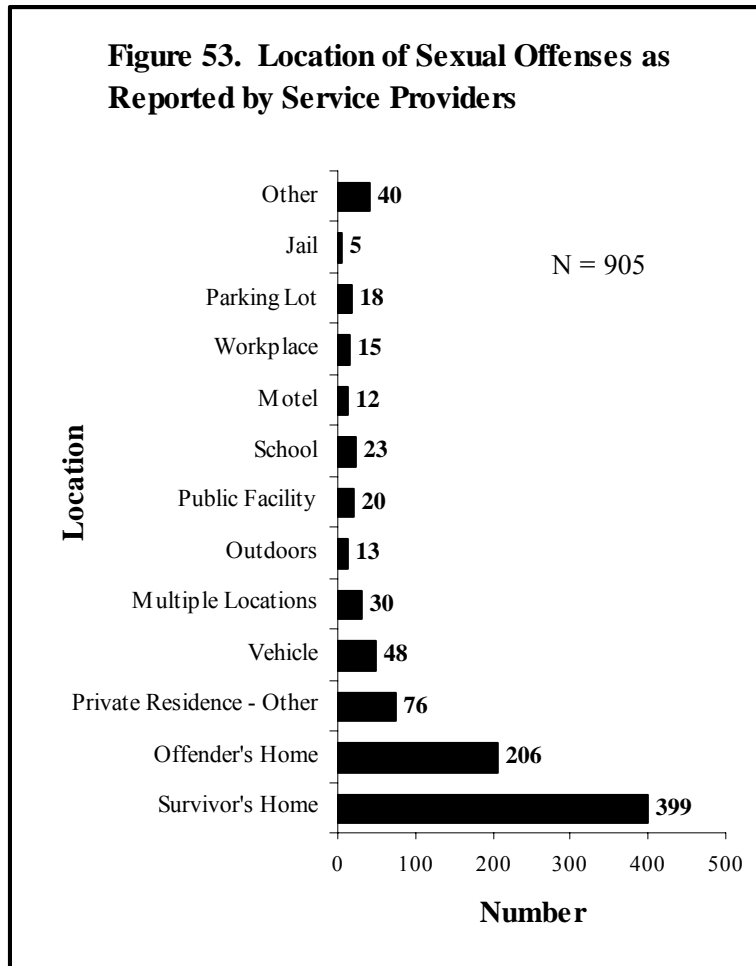

a. Physical Location

Of the 905 reports from therapists that documented *location of the sexual assault*, 44% (399) were committed in the *survivor's home*. This is higher than the reported 34% of sexual assaults committed in the survivor's home as reported in national victimization surveys (Criminal Victimization in the United States, 1994). The *offender's home* represented the location of the second highest category of reported offenses, 23% (206) followed by a *residence other than the survivor or offender's home* 8% (76). Five percent (48) of the assaults occurred in a *vehicle* and 3% (30) in *multiple locations*. See **Figure 53**.

b. Geographic Location

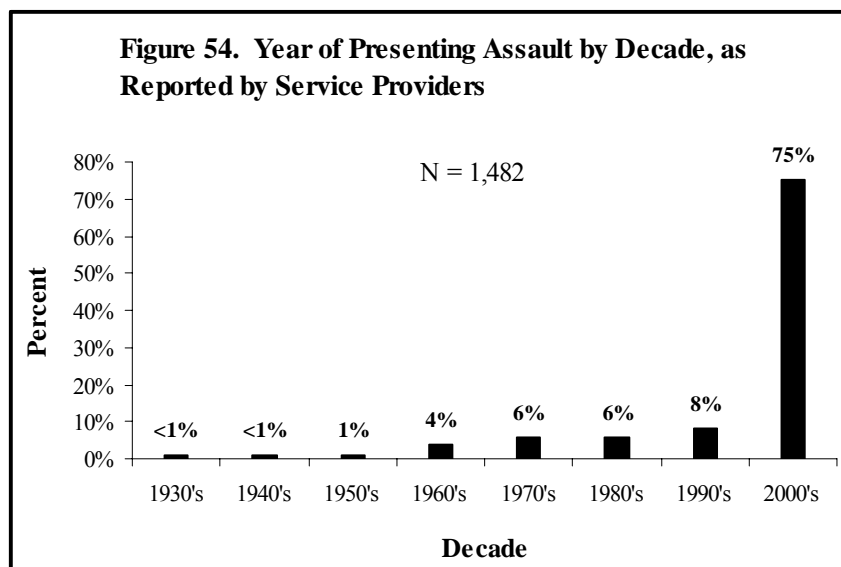

The geographic location of the sexual assault as reported by therapists was documented in 1,265 cases. This includes 1,252 cases from 32 states, and 13 cases from 5 countries outside of the United States. Of all the cases reported, 90% (1,144) took place in *New Mexico* and another 9% in surrounding states. Those states with the most sexual assaults for which the victims sought services in New Mexico include: *Texas* (23), *Arizona* (12), *California* (12) and *Colorado* (8). See **Table 12**. Victims from the following countries outside the United States sought help in New Mexico: *Mexico* (9); *Canada* (1), *China* (1), *Germany* (1), *Portugal* (1).

There were 1,122 survivor reports from New Mexico that documented the county in which the sexual assault occurred. As expected, the greatest proportion of sexual assaults occurred in *Bernalillo County* (35.5%), followed by *San Juan County* (12%), *Dona Ana County* (10.5%) and *Grant County* (10%). See **Table 13**.

c. Year of Current (Presenting) Sexual Assault Incidents

There were 1,482 reports from service providers that documented the year that the sexual assault incident occurred. Almost two-thirds (60%) of those who sought therapeutic services in 2005 for a sexual assault actually experienced the assault in 2005. Those seeking services in 2005 that experienced the assault from 2000-2004 comprised 15% of victim reports. An examination of the data by date of the presenting assault by decade, shows that 8% occurred in the 1990's, 6% in the 1980's, 6% in the 1970's, 4% in the 1960's, 1% in the 1950's and < 1% in the 1940's and 1930's, respectively. See **Figure 54**.

## 7. Domestic Violence and Sexual Assault

*Domestic violence history among survivors* was documented in 790 of the sexual offense reports. Of the cases where *domestic violence among survivors* was documented, 60% (475) of survivors reported a *history of domestic violence*.

There were 800 reports that documented both *survivor ethnicity/race* and *survivor history of domestic violence*. When examined by *survivor ethnicity/race*, 64% (38) of *Native American* survivors, 61% (28) of survivors of *mixed ethnicity*, 57% (200) of *White (non-Hispanic)* survivors and 60% (201) of *Hispanic* survivors reported a history of domestic violence. See **Figure 55**. There were too few cases (9) among *Black* survivors where history of domestic violence was documented to allow for meaningful analysis.

*Domestic violence history among offenders* was understandably reported in a fewer number of cases, since many survivors of assault do not know this information about their offender. However, of the 280 cases where survivors knew and reported the *domestic violence history of the offender*, 76% (214) of offenders had a *history of domestic violence*.

Of the 280 cases where the domestic violence history of the *offender* was known, there were 264 cases that also documented the *survivor's* history of domestic violence. Of 85 survivors with *no history* of domestic violence, 41% (35) were offended by someone *with a history* of domestic violence. Conversely, of 179 survivors *with a history* of domestic violence, 93% (167) were offended by someone *with a history* of domestic violence. This suggests that a survivor *with a history* of domestic violence is significantly (2 times) more likely to be offended by someone *with a history* of domestic violence than a survivor who does not have a history of domestic violence.

## 8. Sexually Transmitted Disease, Pregnancy, and Sexual Assault

### a. Sexually Transmitted Diseases (STD's)

Of the 665 cases where *contraction of a sexually transmitted disease* was documented, 24 (4%) of the survivors contracted a sexually transmitted disease during the reported (current) sexual assault.

There is a significant correlation between *survivor use of alcohol* and the likelihood of *contracting a sexually transmitted disease*. Those survivors who *used alcohol/drugs* were *five times* (5.5) more likely to contract an STD than those who did not use alcohol/drugs. Of the total reported sexual assaults that documented whether *alcohol was used* and whether there was *the contraction of a sexually transmitted disease*, 11% or 1 in 9 (10 of 90) of those survivors who did use alcohol contracted an STD, compared to 2% or 1 in 44 (12 of 527) among survivors who did not use alcohol.

### b. Pregnancy

There were 910 cases that documented whether or not a pregnancy resulted from the presenting sexual assault incident. Of the 910 cases, 24 (3%) resulted in a pregnancy.

## 9. Reported Sexual Assault

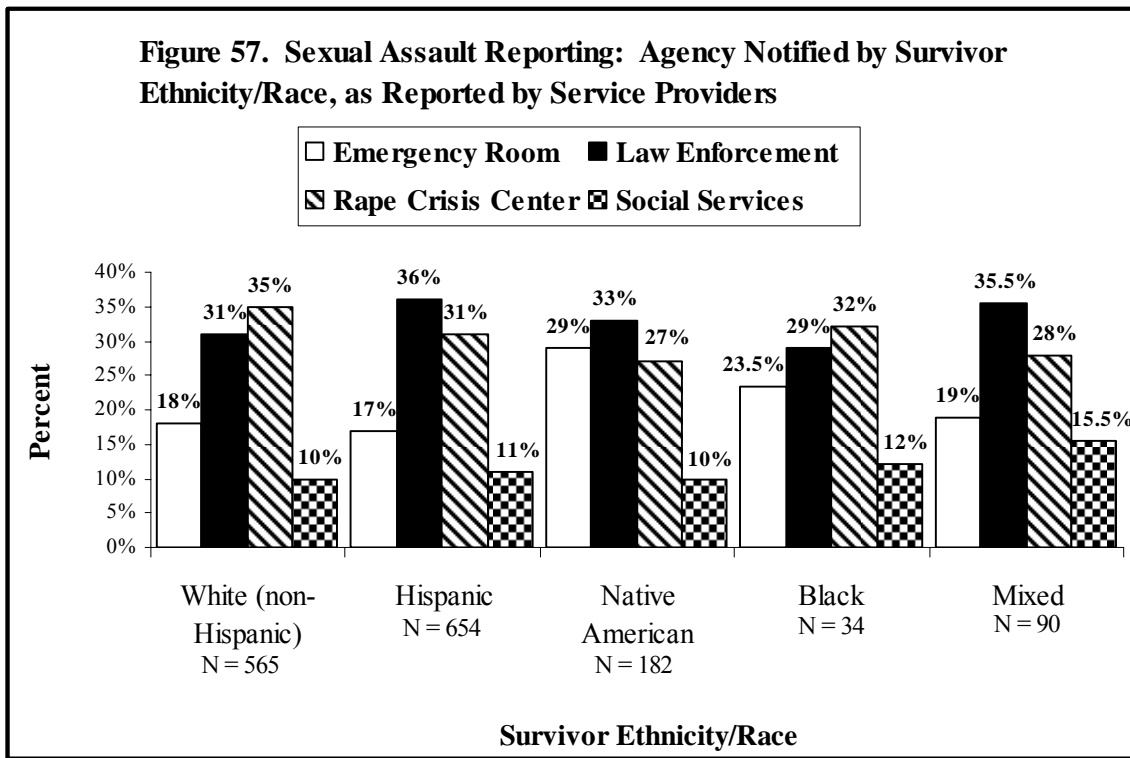

Of the 1,545 sexual assault offenses, there were 1,402 which documented whether the assault was reported to a professional agency. Of these, 283 (20%) were *not reported*. Of the 1,119 that were reported, 84.5% (946) were reported by the *survivor*, 2% (19) by the *therapist*, and 14% (154) by *others* not specified.

There were 1,591 reports made on 863 sexual assaults, as each assault may have been reported to more than one type of agency. Of the 1,591 reports made, 538 (34%) were reported to *law enforcement*, 513 (32%) were reported to a *rape crisis center*, 303 (19%) to an *ER or SANE*, 171 (11%) to a *social service agency*, and 66 (4%) to *other agencies* not specified. See **Figure 56**.

The 34% of reports made to *law enforcement* mirrors the 33% reported nationally (Bureau of Justice Statistics, 1997). However, this data may be skewed as those survivors who seek treatment for sexual assault may be more likely to report than those survivors who do not seek treatment.

More *White (non-Hispanic)* survivors (35%) and *Black* survivors (32%) reported their sexual assaults to *rape crisis centers* than to law enforcement or other agencies. Conversely, more *Hispanic* survivors (36%), *Native American* survivors (33%) and survivors of *mixed ethnicity* (35.5%) reported their assaults to *law enforcement* than to other agencies. A greater proportion of survivors from each ethnic group/race were significantly more likely to report to an *emergency department* than to *social services*. See **Figure 57**.

There were 1,352 cases that documented both, whether a *report was made* and the *ethnicity/race of the survivor*. *White (non-Hispanic)* survivors had the greatest percentage of unreported sexual assaults (23.5%), followed closely by *Hispanic* survivors (21%) and survivors of *mixed race/ethnicity* (18%). *Black* survivors and *Native American* survivors had the fewest unreported sexual assaults (11%, respectively). See **Figure 58**.

**10. Medical Treatment Sought**

There were 795 sexual assault offenses that documented whether medical treatment was sought by the survivor. Of these, 31% (244) *sought medical treatment*. There were 784 reports that documented *medical treatment sought* and *survivor gender*. One-third (33%) of *female* sexual assault survivors and 18% of *male* sexual assault survivors *sought medical treatment*.

An examination of medical treatment sought by *survivor age* revealed that *child* (age birth to 5) survivors (41%) and *adult* (age 18 and older) survivors (40%) were more likely than *children 6-12* (19%) and *adolescents 13-17* (24%) to seek medical treatment. See **Figure 59**.

An examination of *medical treatment sought by survivor ethnicity*, revealed that in 781 documented reports, 56% (44 of 78) of *Native American* survivors sought medical treatment. This represents the ethnic group/race with the greatest proportion of survivors seeking medical treatment among all ethnic groups/races represented by survivors. Approximately one-third (30%, respectively) of *Hispanic* survivors (95 of 318) and *survivors of mixed ethnicity* (14 of 46) sought medical treatment, as well as one-quarter (25%) of *White (non-Hispanic)* survivors (82 of 331). *Black* survivors had too few cases (8) to allow for meaningful analysis. See **Figure 60**.

## 11. Rape Kit Evidence Collection

There were 1,303 service provider reports that documented whether *rape kit evidence was collected* (within 5 days of the assault). Of these 45% (593) reported rape kit evidence collection. When examined by *gender*, significantly more *females* (48%) among female survivors obtained rape kit evidence collection, than *males* among male survivors (27%)

An examination of *rape kit evidence collection* (within 5 days of the assault) by *survivor ethnicity/race* revealed that *Black* survivors (69%) were most likely to have rape kit evidence collected, followed by *Native American* survivors (66%). *White (non-Hispanic)* survivors were least likely to have rape kit evidence collection performed (37%), followed closely by survivors of *mixed ethnicity* (41%). Less than half (46%) of *Hispanic* survivors had rape kit evidence collected. See **Figure 61**.

A analysis was conducted to compare *rape kit evidence collection* among male and female *rape victims* by *gender* and *age*. Of the 1,545 sexual assault victims who sought services in 2005, 822 were victims of criminal sexual penetration (rape). The *gender* of the victim was documented in 814 reports: 88% (720) were *female* rape victims and 12% (94%) were *male* rape victims. Of the 814 reports identifying *rape victims by gender*, 647 documented both *victim age* and *rape kit evidence collection*. Significantly more male and female *adult* (age 18 and older) rape victims obtained rape kit evidence collection than male and female rape victims of other age groups; and among *adult* rape victims, a greater proportion of *males* (46%) obtained rape kit

evidence collection than the proportion of *females* (43%). Conversely, a greater proportion of *female adolescent* (30%) and *child* (20%) rape victims obtained rape kit evidence collection than their male counterparts (7%, respectively). See **Figure 62**.

## **IV. SEXUAL ASSAULT NURSE EXAMINER (SANE) PROGRAMS**

### **A. OVERVIEW OF SEXUAL ASSAULT NURSE EXAMINERS (SANE)**

The purpose of a SANE program is to provide medical treatment to sexual assault victims of all ages and genders. The value of a SANE program is the use of advanced trained nurses who provide prompt, professional medical treatment and care in a private setting, objectively document injuries using special equipment, ensure that evidence is collected properly and backed by chain of custody, and provide quality testimony through legal proceedings – all at no cost to the victim.

All New Mexico SANE Programs use the New Mexico Sexual Assault Evidence Kit (SAEK) within five (5) days of an assault. Overarching principles of SANE include patient confidentiality and informed consent. SANE services are presented as options so that the patient has control over what happens. For example, services offered by SANE programs may include comfort care, medications to prevent sexually transmitted diseases, emergency contraception, evidence collection, documentation and photography of injuries, and referrals for aftermath care. One distinct advantage of the SANE response is its physical environment. SANE units offer a safe, private and quiet environment where the sexual assault victim can influence the pace of the exam and has the time to have services presented as options, both of which are effective tools in re-powering the patient.

One key component of any SANE exam is collaboration with co-responding partners. A coordinated or multi-disciplinary team approach recognizes the dual purpose of the sexual assault exam: to address the patient needs and the justice system needs. In New Mexico, every SANE unit actively coordinates with law enforcement, district attorney offices, crime lab, and crisis services/advocacy.

Fiscal year 2004 was the first year that standardized data from the SANE Programs were available to the Central Repository. Initial data submitted to the Central Repository was in aggregate format. Since the data variables captured were so valuable, an effort was made by each of the SANE Programs in 2005 to submit individual records, similar to the data submitted by statewide mental health centers and rape crisis centers. All but two agencies were able to standardize and submit a full year of individual records. The individualized data submitted by the *Las Cruces* and *Santa Fe* programs represent less than a full year. For a list of statewide SANE Programs, see **Appendix H**. The standardized individualized data collection form used by SANE Programs is found in **Appendix I**. The data analyzed for this report covers the 12-month period 1/1/05 to 12/31/05.

### **B. SANE PROGRAM FINDINGS**

There were 948 patients served by SANE Programs in fiscal year 2005. As expected, most (40% or 376) of all SANE patients were served by the *Albuquerque SANE Collaborative*, followed by the *Santa Fe St. Vincent SANE Program* 27% (261). The number of patients served by each SANE Program is found in **Table 14**.

### 1. Patient Gender

Of all the patients served by SANE Programs in fiscal year 2005, 92% (754) were females.

### 2. Patient Age

There were 753 records documenting *patient age*. Most (53%) patients served were *adults* (ages 18 and older). *Adolescents* (ages 13-17) comprised 20% of all patients served. *Children* (ages 12 and under) comprised 27% of all patients served. When examined by *gender*, most (57%) *male* patients were *children*, while most *female* patients (55%) were *adults*. See **Figure 63**.

### 3. Patient Ethnicity/Race

Of 813 records documenting *patient ethnicity/race*, 42% were *Hispanic*, 35% *White (non-Hispanic)*, 14% *Native American*, 3% *Black*, 3% *Mixed Ethnicity*, and 2% *Other*. *Whites (non-Hispanics)* are represented significantly more in the New Mexico population than among patients seen at SANE Programs. See **Figure 64**.

### 4. Patient Disability

All 820 individual reports documented whether or not the patient had a disability. Of these, 28% (230) had a disability. There were significantly more *male* patients *with a disability* (38%) than female patients with a disability (27%). Further, while *adult* patients (18 and older) had the highest proportion of disability (34%) compared to *adolescents* (ages 13-17, 21%) and *children* (12 and under, 22%), there were twice as many *male adult* patients with a disability (61%) than *female adult* patients with a disability (32%). Similarly, there were more *male child* patients (26%) than *female child* patients (21%). See **Figure 65**.

Of the 230 patients with a disability, the type of disability was documented in 147. Of these, 56% (83) had a *mental/cognitive* disability, 25 (17%) unspecified *physical* disability, 11 (7%) *visual* disability, 9 (6%) hearing disability and 19 (13%) *other* unspecified impairment.

## 5. Offender Gender and Age

Of 679 individual reports where *gender of the offender* was documented, there was a *male* offender in 656 (97%). The *age of the offender* was documented in 585 of the individual reports submitted. Of these, 84% were *adults* (ages 18 and older), 13% were *adolescents* (ages 13-17) and 3% were *children* (12 and under).

## C. OFFENSE CHARACTERISTICS

### 1. Victim/Offender Relationship

Of 218 SANE *child* patients (ages 12 and under), 51% (111) were victimized by a *family member*, 16% (34) by an *acquaintance*, and 2% (5) by a stranger. In 46 (21%) of the cases involving *children*, the relationship of the offender was not documented. Ten percent (22) of the cases involving children were committed by *others*. Among *others* which were specified, most were *neighbors* (4) followed by the *mother's intimate partner/boyfriend* (3) and those associated with *daycare* (3). See **Figure 66**.

By contrast, SANE patients *over age 12* were significantly more likely to be victimized by an *acquaintance* or a *stranger*, than by a *family member*. *Family* offenders comprised 7% of SANE adolescent (ages 13-17) patients and 4% of SANE adult (18 and older) patients. *Stranger* offenders comprised 25% of adolescent SANE patients and 24% of adult SANE patients. *Acquaintance* offenders comprised 47% of adolescent SANE patients and 40% of adult SANE patients. See **Figure 67**.

### 2. Number of Offenders

Of 659 reports that documented the number of offenders per sexual assault, 565 (86%) sexual assaults were perpetrated by *one* offender, 64 (10%) by *two* offenders, 19 (3%) by *three* offenders, and 11 (2%) were perpetrated by *four or more* offenders.

### 3. Type of Coercion

The *type of coercion* used by the perpetrator was documented in 708 cases. The patient's *age* was documented in 654 of these. In 97 cases involving *child* SANE patients (ages 12 and

under), most (33%) were coerced by *physical intimidation*, followed by *physical force* (23%), *verbal threat* (17.5%) and *manipulation* (13%). See **Figure 68**.

In 157 cases involving *adolescents* (ages 13-17), most 44.5% were coerced by *physical force*, followed by *manipulation* (29%) and *verbal threat* (19%). Almost one-quarter (23.5%) were coerced by *other unspecified* types of coercion. Refer to Figure 68.

In 400 cases involving *adult* patients (18 and older) most (64%) were coerced by *physical force*, followed by *verbal threat* (26%) and *manipulation* (23.5%). Refer to Figure 68.

Weapons of all types were used most on *adult* SANE patients (18 and older): *knives* (7%), *firearms* (2%) and *other unspecified weapons* (7.5%); and used least on *children* (ages 12 and under): *knives* (1%), *firearms* (1%) and *other unspecified weapons* (2%). See Figure 69.

The type of coercion used on *adolescent* and *adult* SANE patients was examined by *offender relationship to the victim*, either *family*, *other known offender* or *stranger*. Ten percent of offenses committed by *strangers* involved a knife, compared to 7% of those committed by *family* and 4% of those committed by *other known offenders*. *Family* offenders did not use *firearms* during their offenses, and *strangers* and *other known offenders* used *firearms* in equal proportion (3%, respectively). Over half (59%) of sexual offenses with a *known offender* and those offended by a *stranger* (57%) involved the use of *physical force*, compared to 48% of sexual offenses by a *family member*. Conversely, over one-quarter (28%) of sexual offenses committed by a *family member* involved *physical intimidation* compared to 12% of those committed by a *stranger* and 10% committed by *other known offenders*. See Figure 70.

#### 4. Location of Sexual Offenses

Almost half (47%) of SANE *child* patients (12 and under) were victimized in the *offender's home*. Almost one-third (30%) were victimized in the *victim's home* and another 5% in some *other residence* (babysister's, foster parent's or friend's). An equal proportion were

victimized in a *vehicle* or *daycare* (3%, respectively) and 2% were victimized at *school*. See **Figure 71**.

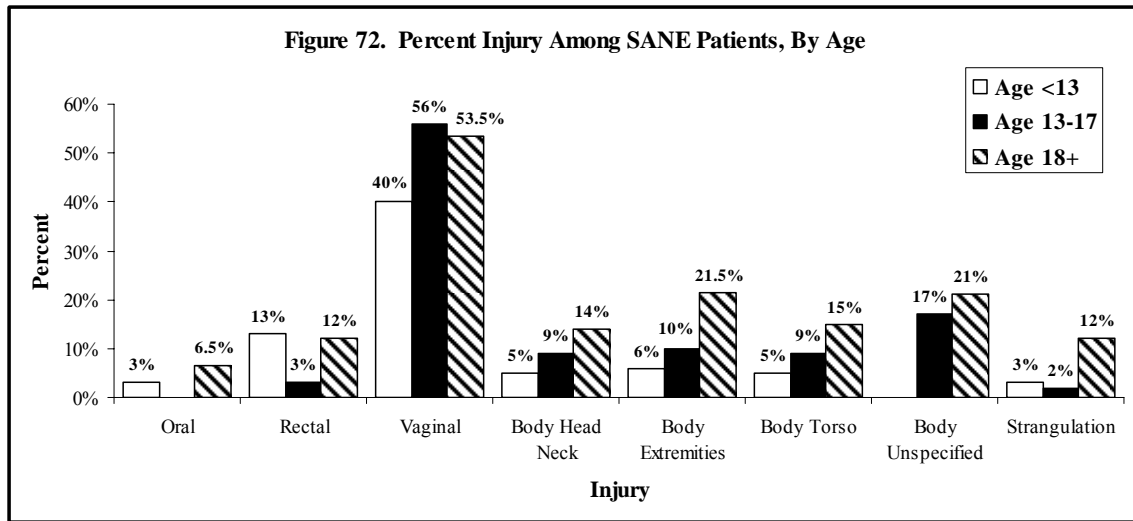

While 19% of *adolescent* (ages 13-17) SANE patients were victimized in their *own homes*, *offender's home* (22%) or *other residence* (5%), most (31%) were victimized in *other unspecified locations*. Another 17% were victimized in a *vehicle*. Refer to Figure 71.

Similarly, 28% of *adult* (18 and older) SANE patients were victimized in their *own homes*, *offender's home* (21%) or *other residence* (5%) and 30% were victimized in *other unspecified locations*. Another 11% were victimized in a *vehicle*. Refer to Figure 71.

## 5. Patient Injury

Victim injury was observed in 78.5% of SANE patients. When examined by *age*, victim injury occurred in 92% of *adult* (18 and older) SANE patients, 86% of *adolescent* (ages 13-17) SANE patients, and 46% of SANE *child* patients (ages 12 and under). *Vaginal* injuries were the type of injuries most observed by SANE practitioners for victims of all ages: 53.5% *adult* victims, 56% *adolescent* victims, and 40% *child* victims. *Rectal* injuries were observed among 13% of *child* victims, 12% of *adult* victims and 3% of *adolescent* victims. While injury to *unspecified body parts* comprised 21% of *adult* victim injuries and 17% of *adolescent* victim injuries, no injuries to unspecified body parts were observed among *child* victims. See **Figure 72**.

When *adolescent* and *adult* victim injury was examined by *victim/offender relationship*, sexual offenses committed by *strangers* involved the highest rate of victim injury (94%), followed by sexual offenses committed by *known non-family offenders* (81.5%) and sexual offenses committed by *family members* (69%). Sexual offenses committed by *family members* involved the highest rate of *vaginal* injuries (60%) compared to those committed by *strangers* (57%) and *other known offenders* (56%). Similarly, sexual offenses committed by *family members* involved the highest rate of *head and neck* injuries (30%) compared to those committed by *strangers* (15%) and *other known offenders* (11%). Additionally, sexual offenses committed by *family members* involved the highest rate of *torso* injuries (20%) compared to those committed by *strangers* (15%) and *other known offenders* (12%). Conversely, sexual offenses committed by *strangers* (23%) and *other known offenders* (21%) involved higher rates of *other unspecified body injuries* compared to those committed by *family members* (5%). The proportion of sexual offenses involving *oral* injuries (5%, respectively) and *rectal* injuries (10%, respectively) was equal among *family*, *stranger* and *other known offenders*. Similarly, there was a negligible difference in the proportion of sexual offenses involving *strangulation* among *family* (10%), *stranger* (10%) and *other known offenders* (9%). See **Figure 73**.

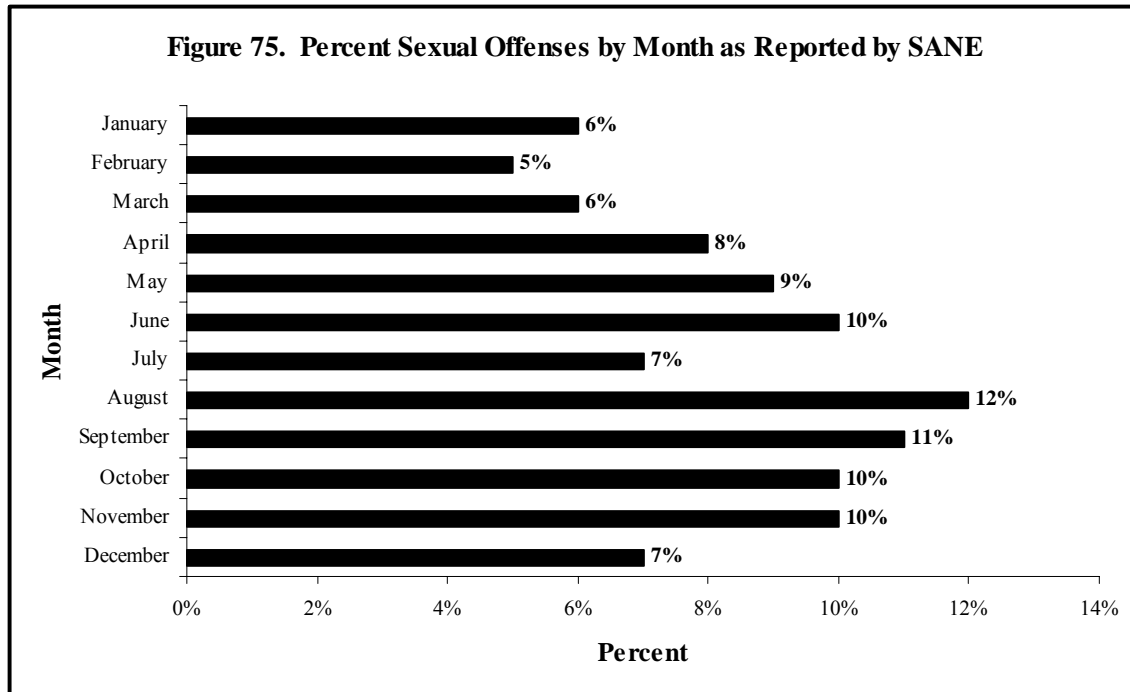

Of 80 SANE patients who were victimized by *multiple* offenders, 99% were injured compared to 89% of the 427 SANE patients that were victimized by *one* offender. The proportion of *oral* injuries among SANE patients victimized by *multiple* offenders (9%) is twice that of those victimized by *one* offender (4.5%). Similarly, the proportion of *rectal* injuries among SANE patients victimized by *multiple* offenders (17.5%) is twice that of those victimized by *one*

offender (9%). Additionally, the proportion of *unspecified other body* injuries among SANE patients victimized by *multiple* offenders (35%) is twice that of those victimized by *one* offender (17%). Only the proportion of *head and neck* injuries was slightly higher among those victimized by *one* offender (14%) than those victimized by *multiple* offenders (12.5%). An equal proportion of those victimized by *one* offender and those victimized by *multiple* offenders experienced *strangulation* (10%, respectively). See **Figure 74**.

## 6. Time (Month) of Sexual Offenses

An examination of sexual assault by *month of occurrence*, found that most sexual assaults occurred in *August* (12%), followed closely by *September* (11%). *June*, *October* and *November* had an equal proportion of sexual offenses with 10%, respectively. *February* was the month with the fewest reported sexual assaults (5%). See **Figure 75**.

#### D. SANE PROGRAMS SERVICE CHARACTERISTICS

##### 1. Referral Source

There were 841 referral sources documented for the 820 SANE cases. Most referrals for victims of all ages came from *law enforcement: adults* (18 and older) 40%, *adolescents* (13-17) 41.5% and *children* (32%). *Hospitals/EMS Services* comprised the second most referrals for victims of all ages: *adults* (33%), *adolescents* (34%) and *children* (22%). More *child* victims were referred to SANE by a *relative* (16%), than adolescent (5%) and adult victims (1%). Conversely, more *adult* victims (8%) and *adolescent* victims (6%) were referred to SANE by a *rape crises center*, than *child* victims (3%). See **Table 15**.

##### 2. Evidence Collection

As expected, a greater proportion of SANE *child* patients (age 12 and under) received *no evidence collection* (10.5%), than *adolescent* (13-17) patients (3%) and *adult* (18 and older) patients (2%). Equally as expected, while most *adult* patients (84.5%) and *adolescent* patients (73%) completed the *sexual assault evidence kit*, less than one-quarter of *child* patients (22%) had this type of evidence collected. Similarly, while most *adult* patients (59%) and *adolescent* patients (54%) had *clothes collected* for forensic evidence, only 15% of *child* patients had their clothes collected. A great proportion of SANE patients of all ages had *photos taken* as a part of evidence collection: 76.5% of *adults*, 72% of *adolescents* and 88% of *children*. Very few SANE patients of any age had *blood collected*: 3% *adults*, 2% *adolescents* and no *child* patients. See **Figure 76**.

**3. Assessment Services**

While all *adolescent* SANE patients (ages 13-17) received *assessment services*, 3% of *child* patients (ages 12 and under) and 1% of *adult* patients did *not* receive assessment services. *Treatment of sexually transmitted diseases* was the service conducted most on *adult* patients (85%) and *adolescent* patients (83%), while *physical assessment/medical exam* was the service most conducted on *child* patients (57%). *Psychological/suicide assessment* was conducted on a small proportion of SANE patients of all ages: 7% *adults*, 6% *adolescents* and 3% *children*. See **Figure 77**.

#### 4. Reports to Law Enforcement

At least three quarters of all SANE cases were reported to police at the time of the SANE exams. As expected, significantly more *child* patients of SANE had their sexual offenses reported to police at the time of the exam (87%) than *adolescent* patients (79%) and *adult* patients (75%).

#### 5. SANE Referrals to Other Services

Sometimes during and after SANE services are provided, the patient is also referred to other services for assistance beyond the scope of SANE Programs. There were 815 patients who received referrals to other services. Overall, slightly over one-quarter (27%) were referred to *law enforcement*, 17% to *rape crisis centers*, 18% to *community mental health centers*, and 12% to *other services*, such as a primary healthcare provider, CYFD or domestic violence advocate.

When examined by *patient age*, significantly more *child* patients (ages 12 and under) were referred to *law enforcement* (45%), than *adolescent* (ages 13-17) patients (24%) or *adult* (18 and older) patients (19%). Similarly, significantly more *child* patients were referred to *community mental health centers* (32%), than *adolescent* (15%) or *adult* (12%) patients. While patients of all ages were referred to *rape crisis centers*, *adult* patients (19%) and *adolescent* patients (18%) were referred more often than *child* patients (12%), and 5% of *child* patients were referred to CYFD. See **Figure 78**.

#### 6. Patient County of Residence

The patient's county of residence was documented in 708 of 820 SANE patients. As expected, most SANE patients (35%) reside in *Bernalillo County*, followed by *San Juan* (12%) and *Santa Fe* (11%) counties. See **Table 16**.

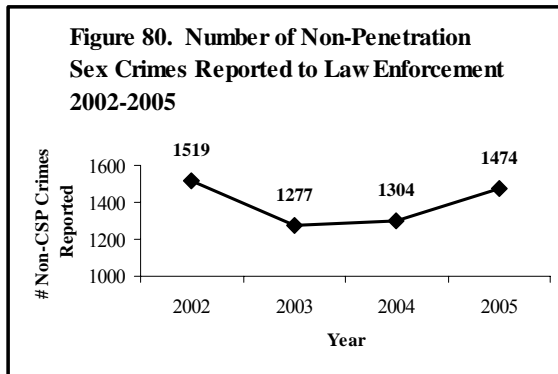

## SECTION THREE: STATEWIDE TRENDS IN SEXUAL ASSAULT, 2002-2005

### I. SEXUAL ASSAULT TRENDS REPORTED BY LAW ENFORCEMENT

#### A. Number of Sexual Assaults Reported to Law Enforcement 2002-2005

Between 2002 and 2005, an average of 1,349 cases of *rape* each year has been reported to statewide law enforcement agencies. See **Figure 79**. The average number of *non-penetration* sex crimes reported each year over the same time period was slightly higher, 1,394. See **Figure 80**.

#### B. Age of Rape Victims and Offenders As Reported by Law Enforcement, 2002-2005

From 2002 to 2005, the age group with the highest average proportion of rape victims was *children* under 13 years old (41%), followed by *adults* 18 and older (31%) and *adolescents* ages 13-17, with 28%. See **Figure 81**.

The age of rape victims remained consistent from 2002 to 2004, but in 2005 *child* rape victims decreased 9% and *adult* rape victims increased 11% from the previous year. See **Figure 82**.

From 2002 to 2005, the age group with the highest average proportion of *rape offenders* was *adults* (73%), followed by *adolescents* (18%) and *children* (9%). Refer to Figure 81

The age of *adult rape offenders* from 2002 to 2005 steadily increased each year from 66% in 2002 to 78% in 2005, while the age of *child rape offenders* decreased steadily each year from 14% in 2002 to 5% in 2005. See **Figure 83**.

**Figure 83. Age of CSP Offenders as Reported by Law Enforcement, 2002-2005**

**Figure 84. White (non-Hispanic) CSP Victims 2002-2005**

**Figure 85. Average Percent of Rape Victims by Race/Ethnicity Compared to NM Race/Ethnic Composition, 2002-2005**

**Figure 86. Hispanic CSP Victims 2002-2005**

**C. Race/Ethnicity of Rape Victims 2002-2005**

In 2002, *White (non-Hispanic)* rape victims comprised 48% of all rape victims in New Mexico. This proportion decreased in 2003 (46%) and to a low in 2004 (39%) but increased to 44% in 2005. See **Figure 84**. The four-year average for *White (non-Hispanic)* rape victims was 44% which approximates their representation in the state population (45%). See **Figure 85**.

By contrast, *Hispanic* rape victims comprised 36% of all rape victims in New Mexico in 2002, increased to 41% in 2003 and to a high in 2004 (48%) before decreasing slightly to 46% in 2005. See **Figure 86**. The four-year average for *Hispanic* rape victims was 43%, second to *White non-Hispanic* victims, and approximates their representation in the state population (42%). Refer to Figure 85.

*Native American* rape victims comprised 13% of all rape victims in New Mexico in 2002 and steadily decreased each year until 2005 (6%), comprising less than half their 2002 rate. See **Figure 87**. The four-year average of *Native American* rape victims was 10%, a rate equal to their representation in the state population. Refer to Figure 85.

**Figure 87. Native American CSP Victims 2002-2005**

**Figure 88. Black CSP Victims 2002-2005**

**Figure 89. White (non-Hispanic) CSP Offenders 2002-2005**

**Figure 90. Average Percent of Rape Offenders by Race/Ethnicity Compared to NM Race/Ethnic Composition, 2002-2005**

*Black* rape victims comprised 2% in 2002 and remained within one percentage point through 2005 (3%). See **Figure 88**. The four-year average of *Black* rape victims was 2%, and similar to *Native Americans*, their rate is equal to their representation in the state population. Refer to Figure 85.

**D. Race/Ethnicity of Rape Offenders, 2002-2005**

**Figure 91. Hispanic CSP Offenders 2002-2005**

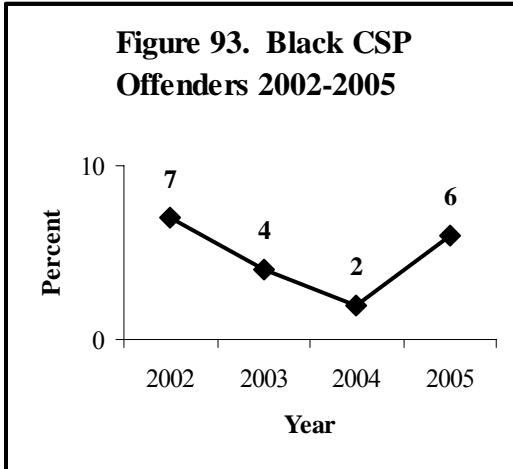

In 2002, *White (non-Hispanic)* rape offenders comprised 31% of all rapists, increased in 2003 (40%) to a high in 2004 (45%) before decreasing to 37% in 2005. See **Figure 89**. The four-year average of *White (non-Hispanic)* rape offenders was 38%, a rate significantly lower than *White (non-Hispanic)* representation in the state population (45%). See **Figure 90**.

*Hispanic* rape offenders comprised 48% of all rapists in 2002, decreased in 2003 (46%) and 2004 (42%) and rose to a high of 50% in 2005. See **Figure 91**. The four-year average of *Hispanic* rape offenders was 46.5%, a rate greater than the *Hispanic* representation in the state population (42%). Refer to Figure 90.

**Figure 92. Native American CSP Offenders 2002-2005**

*Native American* rape offenders comprised 13% of all rapists in 2002, decreased to 9% in 2003, and reached a low of 6% in 2005, less than half their rate in 2002. See **Figure 92**. The four-year average of *Native American* rape offenders was 9.5, a rate equal to *Native American* representation in the state population (10%). Refer to Figure 90.

In 2002, *Black* rape offenders comprised 7% of all rapists, decreased steadily each year to 4% in 2003 and 2% in 2004 before spiking again in 2005 (6%). See **Figure 93**. The four-year average of *Black* rape offenders was 5%, a rate more than twice the representation of *Blacks* in the state population (2%). Refer to Figure 90.

**E. Victim/Offender Relationship, 2002-2005**

There was negligible change reported from 2002-2005 in the proportion of law enforcement reported rapes by *victim/offender relationship*. An average of 13% of rapes were perpetrated by a *stranger*, 87% of rapes perpetrated by *someone known to the victim*, and 34% of rapes with a known offender were perpetrated by a *family member*. See **Figure 94**.

**F. Rapes Involving Alcohol/Drugs and Weapons**

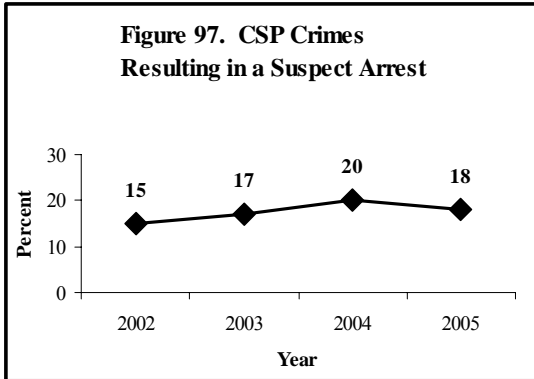

In 2002, 30% of law enforcement reported rapes *involved alcohol/drugs*. This increased dramatically in 2003 (49%) before decreasing in 2004 (40%) and then increasing again in 2005 to 43%. See **Figure 95**. The four-year average of rapes involving *alcohol/drugs* was 40.5%.

The *use of a deadly weapon* in rapes decreased from 4% in 2002, to 3% respectively in 2003 and 2004, to a low of 2% in 2005. Refer to Figure 95. The four-year average for rapes *involving a deadly weapon* was 3%.

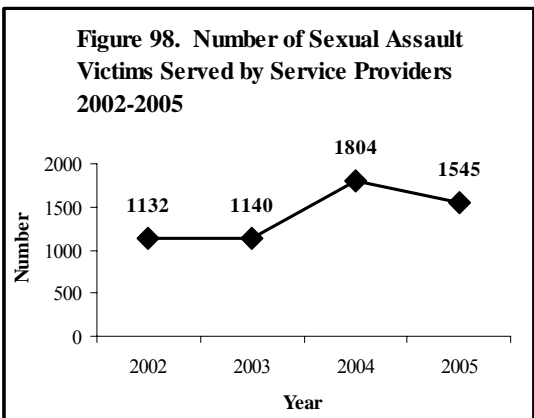

**G. Rapes Involving Victim Injury**

The proportion of law enforcement reported rapes involving *injury to the victim* steadily increased each year from 25% in 2002, to 29% in 2005. See **Figure 96**. The four-year average of rapes *involving victim injury* was 27%.

## H. Rapes Resulting In A Suspect Arrest

In 2002, 15% of law enforcement reported rapes resulted in a *suspect arrest*. This increased to 17% in 2003, 20% in 2004 before decreasing slightly in 2005 (18%). See **Figure 97**. The four-year average for rapes resulting in a *suspect arrest* was 17.5%.

## II. SEXUAL ASSAULT TRENDS REPORTED BY SERVICE PROVIDERS

### A. Number of Sexual Assault Victims Served

Between 2002 and 2005, an average of 1,405 victims of sexual assault sought therapeutic services from statewide sexual assault service providers. In 2002, the fewest sexual assault victims sought services (1,132) but this number rose to 1,140 in 2003 and to its highest level in 2004 (1,804) before decreasing in 2005 (1,545). See **Figure 98**.

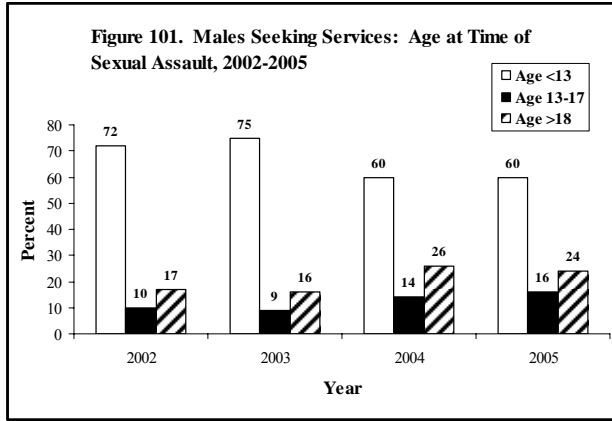

### B. Age of Sexual Assault Survivors at Time of Sexual Assault

In 2002, 40% of *female* sexual assault survivors seeking therapy were *children* (<13 years) when they were sexually assaulted. This proportion increased to 44% in 2003, but decreased to 30% in 2004 and to its lowest rate in 2005 (25%). See **Figure 99**. The four-year average of female sexual assault victims seeking services who were *children* at the time of their sexual assault was 35%. See **Figure 100**.

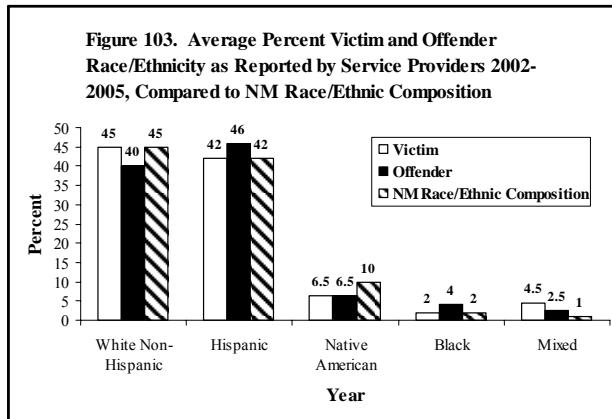

The proportion of *female* sexual assault survivors seeking therapy who were *adults* at the time of their sexual offenses comprised one-third of the female survivors in 2002 and 2003 respectively, but rose sharply to 44% in 2004 and by 2005 comprised over one-half (53%) of the female survivors. Refer to Figure 99. The four-year average of *female* sexual assault survivors who were *adults* at the time of their sexual assaults was 41%. Refer to Figure 100.

Similarly, in 2002, 72% of *male* sexual assault survivors seeking therapy were *children* (<13 years) when they were sexually assaulted. This proportion rose slightly in 2003 (75%), but decreased dramatically to 60% in 2004 and stayed the same in 2005. See **Figure 101**. The four-year average of *male* sexual assault victims seeking services who were *children* at the time of their sexual assault was 67%, almost twice that of the average for *female* survivors in this age group. Refer to Figure 100.

Male survivors seeking services who were *adolescents* (ages 13-17) at the time of their sexual assaults comprised approximately 10% of male survivors in 2002 and 2003, but rose to 14% in 2004 and to 16% in 2005. Refer to Figure 101. The four-year average of *male* sexual assault survivors who were *adolescents* at the time of their sexual assaults was 12%, which is half the average for *female* survivors in this age group (24%). Refer to Figure 100.

The proportion of *male* sexual assault survivors seeking therapy who were *adults* at the time of their sexual offenses comprised 17% of male survivors in 2002 but rose to 24% in 2005. Refer to Figure 101. The four-year average of *male* sexual assault survivors who were *adults* at the time of their sexual assaults was 21%, a rate half that of the average for *female* survivors in this age group (41%). Refer to Figure 100.

### C. Race/Ethnicity of Victims Seeking Services 2002-2005

In 2002, *White (non-Hispanic)* victims comprised 44% of all sexual assault victims seeking services. This rate increased to 49% in 2003, decreased to 47% in 2004 and dropped significantly to 41% in 2005. See **Figure 102**. The four-year average for *White (non-Hispanic)* victims seeking services was 45% which equals *White (non-Hispanic)* representation in the state and is the most of any race/ethnicity represented among victims seeking services. See **Figure 103**.

**Figure 104. Hispanic Victims as Reported by Service Providers 2002-2005**

*Hispanic* victims comprised 43% of all sexual assault victims seeking services in 2002, dropped to a low 39% by 2004, and rose significantly to 45% in 2005. See **Figure 104**. The four-year average for *Hispanic* victims seeking services was 42%, second to *White (non-Hispanic)* victims and equals *Hispanic* representation in the state population. Refer to Figure 103.

**Figure 105. Native American Victims as Reported by Service Providers 2002-2005**

*Native American* victims doubled their representation among all sexual assault victims seeking services from a 2002 rate of 5% to a rate of 10% in 2005. See **Figure 105**. The four-year average for *Native American* victims seeking services was 6.5%. This means that *Native American* representation among sexual assault victims seeking services is less than their representation in the state population (10%). Refer to Figure 103.

**Figure 106. Black Victims as Reported by Service Providers 2002-2005**

There was little change in the proportion of *Black* victims seeking services from 2002 (2%) to 2005 (3%). See **Figure 106**. The four-year average was 2% which equals *Black* representation in the state population. Refer to Figure 103.

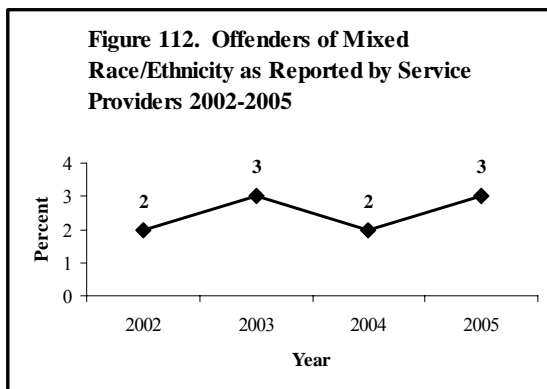

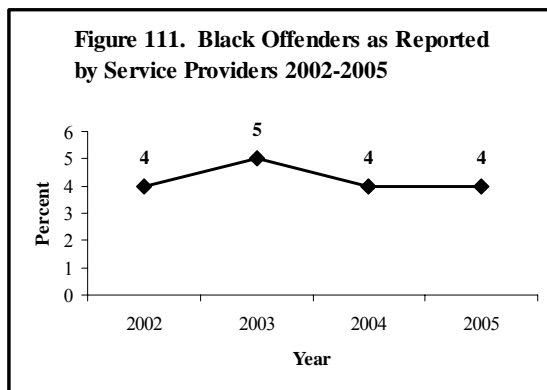

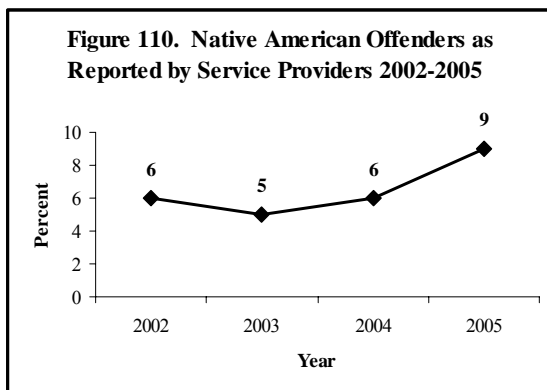

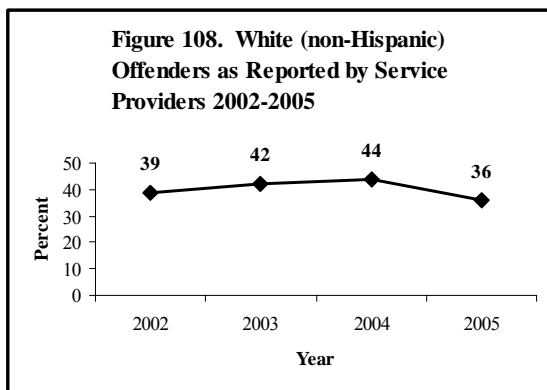

**Figure 107. Victims of Mixed Race/Ethnicity as Reported by Service Providers 2002-2005**

Similarly, sexual assault victims of *mixed ethnicity* comprised 5% of those seeking services in 2002 and saw little change in 2003 and 2004 with 4%, respectively and returned to 5% in 2005. See **Figure 107**. The four-year average for victims of *mixed ethnicity* was 4.5%, which means that their representation among sexual assault victims seeking services is significantly greater than their representation in the state population. Refer to Figure 103.

#### **D. Race/Ethnicity of Offenders As Reported by Victims Seeking Services, 2002-2005**

Over one-third (39%) of sexual assault offenders as reported by victims seeking services in 2002, were *White (non-Hispanic)*. This rate increased to 42% in 2003, 44% in 2004 and then fell to 36% in 2005. See **Figure 108**. The four-year average of *White (non-Hispanic)* sexual assault offenders was

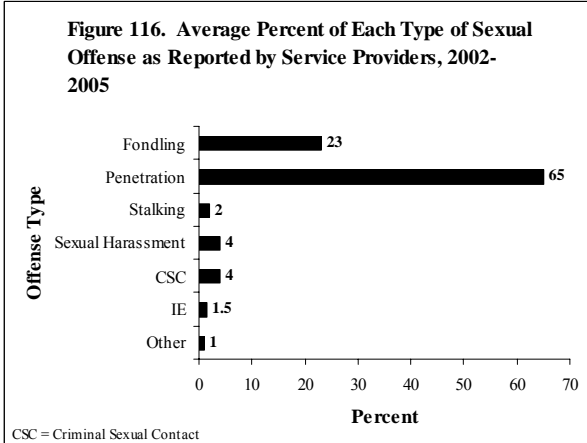

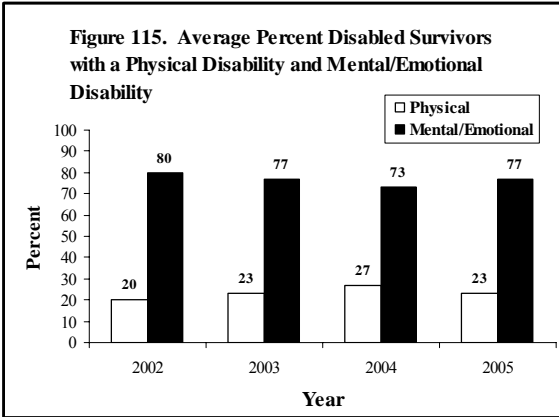

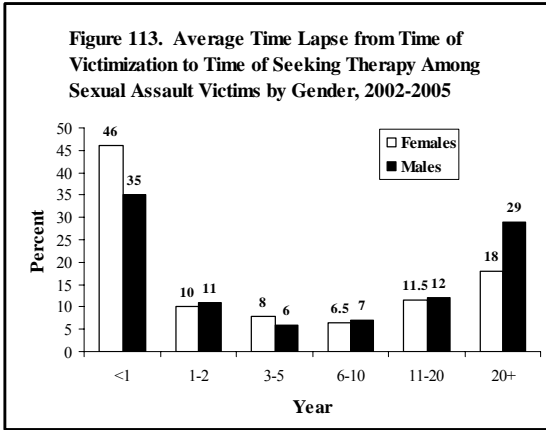

40%, significantly less than *White (non-Hispanic)* representation in New Mexico (45%). Refer to Figure 103.

Almost half (49%) of all sexual assault offenders as reported by victims seeking services in 2002, were *Hispanic*. This rate decreased to 45% in 2003 and to 43% in 2004, then increased to 47% in 2005. See **Figure 109**. The four-year average of *Hispanic* sexual assault offenders was 46%, a rate greater than *Hispanic* representation in New Mexico (42%). Refer to Figure 103..

*Native American* sexual assault offenders as reported by victims seeking services, stayed around 6% from 2002 to 2004, then rose to 9% in 2005. See **Figure 110**. The four-year average of *Native American* sexual assault offenders was 6.5%, a rate less than *Native American* representation in New Mexico (10%). Refer to Figure 103.

Similar to findings with *Black* victims seeking services, there was little change in the proportion of *Black* offenders as reported by victims seeking services from 2002 (4%) to 2005 (4%). See **Figure 111**. The four-year average was 4% which is twice that of *Black* representation in the state population. Refer to Figure 103.

Likewise, sexual assault offenders of *mixed ethnicity* comprised 2% of those seeking services in 2002 and saw little change in 2003 (3%) and 2004 (2%) and reported a one percent increase in 2005 (3%). See **Figure 112**. The four-year average for offenders of *mixed*

*ethnicity* as reported by victims seeking services was 2.5% which means that their representation among sexual assault offenders is greater than their representation in the state population. Refer to Refer to Figure 103.

**E. Length of Time Between Sexual Assault Occurrence and Seeking Services As Reported by Service Providers, 2002-2005**

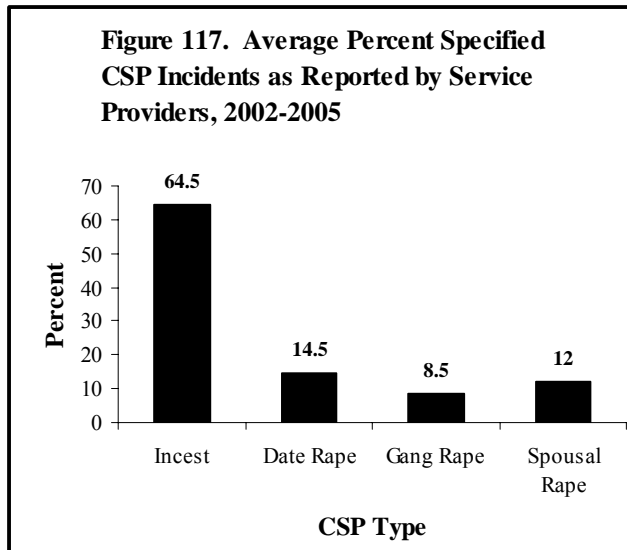

While an average of 46% of *female* sexual assault victims and 35% of *male* sexual assault victims sought therapy within one year of their sexual assaults, after one year, an average of 29% males and 18% females were more likely to wait over 20 years to seek services than any other length of time. The average delay in seeking therapy among *male* sexual assault victims is 12.5 years compared to 9.4 years for *females*. See **Figure 113**.

**F. Sexual Assault Survivors with A Disability Who Sought Services, 2002-2005**

Almost one-third (31%) of sexual assault survivors in 2002 had a disability. This rate changed slightly in 2003 to 30%, dropped to 26% in 2004 and rose to 30% again, in 2005. See **Figure 114**. Sexual assault survivors with a disability comprised an average of 29% of all survivors seeking services from 2002-2005. Among sexual assault survivors with a disability, an average of 77% had a mental/emotional disability and 23% had a physical disability for the four-year period. See **Figure 115**.

**G. Type of Sexual Offense As Reported by Service Providers, 2002-2005**

From 2002-2005, an average of approximately two-thirds (65%) of victims seeking services for sexual assault were *raped*. Just over one-quarter (27%) sought services for *fondling* (23%) and *criminal sexual contact* (4%). *Sexual harassment* comprised an average of 4% of those seeking services for sexual offenses and *stalking* comprised an average of 2%. See **Figure 116**.

The *type of rape* most represented by those seeking services from 2002-2005 was *incest*, as an average of 64.5% of rape victims were *incest* victims. *Date rape* victims comprised an average 14.5% of victims seeking services, *spousal rape* victims an average 12%, and *gang rape* victims an average 8.5%. See **Figure 117**.

**H. Sexual Assault Victims That Reported Their Victimization, As Reported by Service Providers, 2002-2005**

Between 2002 and 2005, an average of 30% of sexual assault victims seeking services did not report their victimization to anyone. Of those that did report, an average of one-third (33.5%) reported their victimization to *law enforcement*, slightly over one-quarter (27%) reported their victimization to a *rape crisis center*, 19% reported to an *emergency department*, 12% reported to *social services* and 6% reported to *others* unspecified. See **Figure 118**.

**I. Prior Abuse/Assault Among Sexual Assault Victims Seeking Services, 2002-2005**

In 2002, slightly over one-third (36%) of *females* seeking services for sexual offenses said they experienced a *prior sexual assault/abuse*. This rate remained relatively unchanged with one-third of these females in 2003 (33%), 2004 (34%) and 2005 (35%) reporting a prior sexual assault/abuse. See **Figure 119**. The four-year average of *prior assault/abuse* among sexual assault *female* victims seeking services was 38.5%.

While *male* sexual assault victims reported lower rates of experiencing a *prior sexual assault/abuse* than female victims, the four-year average of prior assault/abuse among sexual assault *male* victims seeking services was 25.5%. The rates decreased from 22% in 2002 to 12%

in 2003 only to rise dramatically in 2004 (27%) and to a high of 35% among male sexual assault victims seeking services in 2005. Refer to Figure 119.

**J. Medical Treatment Sought for Victim Injuries Related to Sexual Assaults, 2002-2005, As Reported by Service Providers**

In 2002, one-third (34%) of victims seeking services *sought medical treatment for injuries* suffered during their sexual assault. This rate dropped to 21% in 2003, rose dramatically to 24% in 2004 and reached its present level of 31% in 2005. The four-year average of sexual assault victims seeking services who *sought medical treatment for their injuries related to the assault* was 27.5%.

**K. Rape Kit Evidence Collection Among Rape Victims Seeking Services, 2002-2005**

In 2002, 9% of rape victims who sought services that were *children* (<13 years old) at the time of their rapes, obtained *rape kit evidence collection*. This rate increased to 12% in 2003, dropped slightly to 10% in 2004 and rose to 17% in 2005. See **Figure 120**. The four-year average of rape victims seeking services who were *children* at the time of their rape was 12%.

One-third (36%) of rape victims who sought services that were *adolescents* (ages 13-17) at the time of their rapes, obtained *rape kit evidence collection* in 2002. This rate decreased to 24% in 2003, increased slightly to 25% in 2004 and rose to its highest rate in 2005 (28%). Refer to Figure 120. The four-year average of rape victims seeking services who were *adolescents* at the time of their rapes was 28%, over twice the rate of *child* rape victims.

Slightly over half (55%) of rape victims who sought services that were *adults* (ages 18 and older) at the time of their rapes, obtained *rape kit evidence collection* in 2002. This rate decreased significantly in 2003 (34%), increased slightly in 2004 (35%) and rose to 43% in 2005. Refer to Figure 120. The four-year average of rape victims seeking services who were adults at the time of their rapes was 43%.

### III. IMPLICATIONS OF THE FINDINGS

#### A. Implications for Prevention

When only 6% males and 19% females report their rapes to law enforcement, there needs to be a concerted effort to better identify rape victims by focusing on *why* they do not report. There are significant gender differences in why victims do not report. Most males in the statewide survey did not report because they considered the rape to be *too minor or not a crime*, while females *feared their offender or felt shame*. These differences must be taken into consideration for successful prevention education.

Perhaps one of the most startling findings from the statewide victimization survey was the proportion of incapacitated rapes among females and the proportion of these experienced as children. Of all rapes among females, 8.5% were incapacitated rapes; and unlike males, who most experienced incapacitated rapes as adults (43%) and adolescents (40%), female victims experienced incapacitated rapes most as adolescents (39%) and children (31%). Adult females experienced 29% of the incapacitated rapes. Interventions focused on preventing incapacitated rape should be a primary goal among statewide prevention programs.

If prevention efforts could dramatically reduce the number of females who perpetrate sexual offenses, the *reduction* in the number of victims and incidents of sexual assault would be negligible. All sources of data examined for this report demonstrate the overwhelming reality that males perpetrate rapes: law enforcement incidents (93%); service providers cases (97%); SANE cases (97%) and survey findings (85%). Even when males are the rape victims, males are also the perpetrators 85% of the time. Until more prevention programs target males as the focus of their interventions, little will be accomplished to reduce the incidence of rape and sex crimes, overall.

Similarly, much prevention is focused on children because children comprise so many of those victimized: 44% of the rape victims identified in the statewide survey; 33% of rape victims identified by law enforcement and 49% of rape victims identified by service providers. However, these same sources of data reveal that rape *offenders* are overwhelmingly *adults* (law enforcement 78%, service providers 84%, and SANE units 84%). Children have little power to counter the sophisticated coercion techniques, verbal threats, physical intimidation and physical force of adult offenders. Therefore, more prevention should be focused on working with *adults*, and especially *male adults*, to stop sexual assault and abuse.

What is it that makes *male Hispanic children* (68%) dramatically more susceptible to rape compared to male children of other races/ethnicities? The prevention implication is unclear but the need to study this issue is most evident.

Who are the primary perpetrators of the sexual abuse of children? Their family members, chiefly their fathers, step-fathers, uncles, cousins and brothers. Prevention programs should be two-fold: 1) prevention aimed at helping a child guard against family members as perpetrators and what to do in the event of sexual abuse by a family member; and 2) prevention aimed at helping the family members examine their own sexual behaviors and boundaries, identify healthy and unhealthy sexual behaviors/practices by relatives (and others that their children may come into contact with), learn how to protect their children from sexual abuse by relatives (and others) and access available resources.

## **B. Implications for Law Enforcement**

The statewide survey identified 5,320 rape victims in 2005. In the same time period, law enforcement reported 1400 rape incidents. An explanation for the disparity in identifying rape incidents is the scope of rape (penetration) crimes captured. While the survey captured many forms of criminal sexual penetration and incapacitated rape, law enforcement codes restrict the types of penetration crimes captured and do not capture incidents of incapacitated rape, a type of rape that comprised 43% of the rapes identified by the survey. To this end, much consideration should be made by law enforcement and the FBI which guides law enforcement, to expand the types of criminal sexual penetration captured to include more types of penetration, especially incapacitated rape.

Both male and female rape victims from the statewide survey reported being *dissatisfied*, most *very dissatisfied* with the law enforcement response to their complaint. The most common reason given for their dissatisfaction was that they wanted the police to *charge/arrest the offender or keep the offender locked up* (18%) and to *take a report and follow through with an investigation, to question the offender* (13%). When victim dissatisfaction was examined by gender of the victim, there were dramatically more very dissatisfied males (66%) compared to females (38%). The implications are unclear. Perhaps this is more a matter of policy change, regarding officer response to alleged rape victims rather than the actions of individual officers. Perhaps it is a matter of officer sensitivity training responding to male complaints of rape. Finally, perhaps there is an implication for the role of victim advocacy and an examination of protocol for referral of rape victims by responding officers to advocacy services.

## **C. Implications for Healthcare**

Slightly over one-quarter of rape victims (29%) are injured during their rape incidents, and approximately one-third of these go for medical treatment. Sexual Assault Nurse Examiner units capture information regarding sexual assault patients that present to their facilities and offer forensic evidence collection and sometimes a physical exam. However, no standardized monitoring system currently exists to reliably document the number of rape victims that go to emergency departments or doctor's offices as a result of a sexual assault. Further, twice as many rape victims as non-victims suffer from serious disabling injury and approximately six times as many rape victims as non-victims suffer from one or more chronic mental health conditions. Without identifying these patients, it is impossible to determine healthcare utilization due to sexual assault or to more effectively treat these patients by offering them appropriate referral services. The implication to improve public health is to consider the need for universal screening for lifetime exposure to sexual assault and other forms of violence.

**APPENDIX A: SURVEY OF VIOLENCE VICTIMIZATION IN NEW MEXICO**

SCHULMAN, RONCA AND BUCUVALAS, INC.  
145 EAST 32nd STREET  
NEW YORK, NEW YORK 10016

STUDY NO. 3618F  
December 5, 2005  
FINAL Draft

RESP. ID. \_\_\_\_\_

RESP. TELEPHONE NUMBER: \_\_\_\_\_ - \_\_\_\_\_ - \_\_\_\_\_

Interviewer: \_\_\_\_\_

Interview Date: \_\_\_\_/\_\_\_\_/ 2005

Time Interview Began: \_\_\_\_:\_\_\_\_ AM/PM Time Interview Ended: \_\_\_\_:\_\_\_\_ AM/PM

-----  
SAMPLE READ-IN:

Replicate Number \_\_\_\_  
Zip Code \_\_\_\_\_  
FIPS Code \_\_\_\_\_  
State \_\_\_\_  
Wave code \_\_\_\_\_

- S1. Hello, I'm \_\_\_\_\_ from SRBI (the national research organization). We are conducting a statewide survey on personal safety for the New Mexico Coalition against Violence. (I F NEEDED: This study is being conducted under a grant from the State of New Mexico, Office of injury Prevention.)
- S2. How many persons, age 18 and older, live in this household?  
\_\_\_\_ Number of 18+ persons  
(VOL) None.....THANK AND SCREEN OUT
- S3. How many of those adults are (women/men)?  
a. \_\_\_\_ women (VOL) (VOL) None.....00  
b. \_\_\_\_ men (VOL) (VOL) None.....00
- S4. In order to select just one person to interview, may I please speak to the GENDER (48% male) in your household, age 18 or older, who has had the most recent birthday?

Designated Respondent on line..1 **GO TO QS6**  
Someone else.....2 **GO TO QS5**  
SCHEDULE CALLBACK.....3 **GO TO CALLBACK SCREEN**

S5. **[IF NEW RESPONDENT COMES TO PHONE:]**

Hello, I'm \_\_\_\_\_ from SRBI (the national research organization). We are conducting a statewide survey on personal safety for the New Mexico Coalition against Violence. (I F NEEDED: This study is being conducted under a grant from the State of New Mexico, Office of injury Prevention.)

S6. I will be asking you about your personal experiences and opinions. You don't have to answer any questions you don't want to answer. All of your answers will be treated as strictly confidential. Your participation is completely voluntary, but very important to the study.

-----  
[You can confirm the authenticity of the survey by calling our 800 number-1-800-772-7066, and asking for the New Mexico Safety Survey Coordinator.]

Can we begin?

Yes.....1 GO TO Q1  
No, want to confirm.....2 GET NAME AND ARRANGE CALLBACK  
Want to think about it...3 GET NAME AND ARRANGE CALLBACK  
(VOL) Refused.....4 GO TO QS8

---

---

S7 CALLBACK: When would be a good time for me to call back after you have had an opportunity to (confirm/think about) it?

Date: \_\_\_\_\_ Time: \_\_\_\_\_ AM/PM

Thanks. We will call back, then.

**\*\* NOTE: NOT SURE AND REFUSED PUNCHES WILL BE INCLUDED IN EVERY QUESTION.**

S8. Thank you for your time. Could you please tell me why you do not wish to participate in the study?

---

---

**SECTION 1: FEAR OF VIOLENCE AND ACCOMMODATION BEHAVIOR**

1. I'd like to begin by asking...Overall, would you say that personal safety for women in this country has improved since you were a child, gotten worse since you were a child, or is about the same?

- Improved 1
- Gotten worse 2
- About the same 3
- (VOL) Not sure 4
- (VOL) Refused 5

2. Specifically, do you think the following things are more of a problem for women today, less of a problem, or about the same? Do you think (ITEM) is more of a problem, less of a problem or about the same?

		More Problem	Less Problem	About Same	NS	Refuse
a.	Violent crime	1	2	3	4	5
b.	Domestic violence	1	2	3	4	5
c.	Sexual harassment	1	2	3	4	5
d.	Sexual assault	1	2	3	4	5
e.	Stalking	1	2	3	4	5

3. How concerned are you about your own personal safety? Are you... ?

- Very concerned 1
- Somewhat concerned 2
- Just a little concerned, or 3
- Not really concerned 4
- (VOL) Not sure 5
- (VOL) Refused 6

4. Do you ever carry something with you to defend yourself or to alert other people?

- Yes 1
- No 2 SKIP TO QD1
- (VOL) Not sure 3 SKIP TO QD1
- (VOL) Refused 4 SKIP TO QD1

4a.. How often do you carry something with you to defend yourself or to alert other people? Would you say...READ LIST

- Always 1
- Usually, or 2
- Sometimes 3
- (VOL) Not sure 4
- (VOL) Refused 5

4b. What do you carry? DO NOT READ/MULTI-PUNCH

Whistle/noise-maker/personal alarm	1
Mace/tear gas/other spray	2
Knife/sharp object	3
Gun	4
Keys/keychain	5
Stick/bat/club/hammer/flashlight/other blunt object	6
Dog	7
Martial arts/fist	8
Phone/cellular phone	9
Other	10
(VOL) Not sure	11
(VOL) Refused	12

**SECTION 2: RESPONDENT CHARACTERISTICS**

D1. Now I'd like to ask you some questions for background purposes.

How old are you?

\_\_\_\_\_ AGE 97+=97 (VOL) Not sure=98 (VOL) Refused=99

D2. Are you currently employed full-time, part-time, in the military, unemployed and looking for work, retired, a student, a homemaker or something else? MULTI RECORD

Employed full-time,	1
Employed part-time,	2
In the military	3
Unemployed and looking for work,	4
Retired and not working,	5
A student,	6
A homemaker or	7
Something else?	8
(VOL) Not sure	9
(VOL) Refused	10

D3. What is the highest level of education you have completed? DO NOT READ LIST

No schooling	1
1st-8th grade	2
Some high school	3
High school graduate	4
Some college	5
4 year college degree (BA/BS)	6
Post graduate	7
(VOL) Not sure	8
(VOL) Refused	9

D5. Are you Hispanic or Latino?

Yes, Hispanic	1
Not Hispanic	2
(VOL) Not sure	3
(VOL) Refused	4

D4. Which of the following categories best describes your racial background?

White or Caucasian	1
Black or African American	2
Asian or Pacific Islander	3
American Indian or Alaskan Native	4
Mixed Race	5
(VOL) Not sure	6
(VOL) Refused	7
(VOL) Other	8

**IF S4=1, SKIP TO D7, ELSE ASK D6.**

## **SECTION 4: ASSAULT/VIOLENCE INCIDENTS**

### **SEXUAL ASSAULT**

We are particularly interested in learning more about violence women (men) experience, either from strangers, friends, relatives, or even by spouses and partners. I'm going to ask you some questions about unwanted sexual experiences you may have had either as an adult or as a child. You may find the questions upsetting, but it is important that we ask them this way so that everyone is clear about what we mean. Remember, the information you are providing is confidential. Regardless of how long ago it happened,...

14. Has a man (woman) or boy (girl) ever made you have sex **by using force or threatening to harm** you or someone close to you? Just so there is no mistake, by sex we mean putting a penis in your vagina (putting your penis in a vagina).

Yes	1
No	2
(VOL) Not sure	3
(VOL) Refused	4

15. Has anyone, male or female, ever made you have oral sex by using force or threat of harm? Just so there is no mistake, by oral sex we mean that a man or boy put his penis in your mouth or someone male or female, penetrated your (vagina) or anus with their mouth or tongue.

Yes	1
No	2
(VOL) Not sure	3
(VOL) Refused	4

16. Has anyone ever made you have anal sex by using force or threat or harm? Just so there is no mistake, by anal sex we mean that a man or boy put his penis in your anus?

Yes	1
No	2
(VOL) Not sure	3
(VOL) Refused	4

17. Has anyone, male or female, ever put fingers or objects in your (vagina) or anus against your will by using force or threats?

Yes	1
No	2
(VOL) Not sure	3
(VOL) Refused	4

18. Has anyone, male or female, ever ATTEMPTED to make you have vaginal, oral or anal sex against your will, but intercourse or penetration did not occur?

Yes	1
No	2
(VOL) Not sure	3
(VOL) Refused	4

19. Has anyone ever had sex with you when you didn't want to after you drank so much ALCOHOL that you were very high, drunk, or passed out? By having sex, we mean that a someone put his/her private sexual part in/on your private sexual part, your rear end, or your mouth?

- Yes.....1
- No.....2
- Not sure.....3
- Refused.....4

20. Has anyone ever had sex with you when you didn't want to after someone gave you or you had taken enough DRUGS to make you very high, intoxicated, or passed out?

## **Appendix B: New Mexico Sex Crime Statutes**

### **Chapter 30**

#### **Criminal Offenses**

#### **Article 9: Sexual Offenses**

##### **30-9-10. Definitions.**

As used in Sections 30-9-10 through 30-9-16 NMSA 1978:

A. "force or coercion" means:

- (1) the use of physical force or physical violence;
- (2) the use of threats to use physical violence or physical force against the victim or another when the victim believes that there is a present ability to execute the threats;
- (3) the use of threats, including threats of physical punishment, kidnapping, extortion or retaliation directed against the victim or another when the victim believes that there is an ability to execute the threats;
- (4) the perpetration of criminal sexual penetration or criminal sexual contact when the perpetrator knows or has reason to know that the victim is unconscious, asleep or otherwise physically helpless or suffers from a mental condition that renders the victim incapable of understanding the nature or consequences of the act; or
- (5) the perpetration of criminal sexual penetration or criminal sexual contact by a psychotherapist on his patient, with or without the patient's consent, during the course of psychotherapy or within a period of one year following the termination of psychotherapy;

Physical or verbal resistance of the victim is not an element of force or coercion.

B. "great mental anguish" means psychological or emotional damage that requires psychiatric or psychological treatment or care, either on an inpatient or outpatient basis, and is characterized by extreme behavioral change or severe physical symptoms;

C. "patient" means a person who seeks or obtains psychotherapy;

D. "personal injury" means bodily injury to a lesser degree than great bodily harm and includes, but is not limited to, disfigurement, mental anguish, chronic or recurrent pain, pregnancy or disease or injury to a sexual or reproductive organ;

E. "position of authority" means that position occupied by a parent, relative, household member, teacher, employer or other person who, by reason of that position, is able to exercise undue influence over a child;

F. "psychotherapist" means a person who is or purports to be a:

- (1) licensed physician who practices psychotherapy;
- (2) licensed psychologist;
- (3) licensed social worker;
- (4) licensed nurse;
- (5) counselor;
- (6) substance abuse counselor;
- (7) psychiatric technician;
- (8) mental health worker;
- (9) marriage and family therapist;
- (10) hypnotherapist; or

(11) minister, priest, rabbi or other similar functionary of a religious organization acting in his role as a pastoral counselor;

- G. "psychotherapy" means professional treatment or assessment of a mental or an emotional illness, symptom or condition; and
- H. "school" means any public or private school, including the New Mexico military institute, the New Mexico school for the visually handicapped, the New Mexico school for the deaf, the New Mexico boys' school, the New Mexico youth diagnostic and development center, the Los Lunas medical center, the Fort Stanton hospital, the Las Vegas medical center and the Carrie Tingley crippled children's hospital, that offers a program of instruction designed to educate a person in a particular place, manner and subject area. "School" does not include a college or university; and
- I. "spouse" means a legal husband or wife, unless the couple is living apart or either husband or wife has filed for separate maintenance or divorce.

**30-9-11. Criminal sexual penetration.**

- A. Criminal sexual penetration is the unlawful and intentional causing of a person to engage in sexual intercourse, cunnilingus, fellatio or anal intercourse or the causing of penetration, to any extent and with any object, of the genital or anal openings of another, whether or not there is any emission.
- B. Criminal sexual penetration does not include medically indicated procedures.
- C. Criminal sexual penetration in the first degree consists of all sexual penetration perpetrated:
  - (1) on a child under thirteen years of age; or
  - (2) by the use of force or coercion that results in great bodily harm or great mental anguish to the victim.

Whoever commits criminal sexual penetration in the first degree is guilty of a first degree felony.

- D. Criminal sexual penetration in the second degree consists of all criminal sexual penetration perpetrated:
  - (1) on a child thirteen to eighteen years of age when the perpetrator is in a position of authority over the child and uses this authority to coerce the child to submit;
  - (2) on an inmate confined in a correctional facility or jail when the perpetrator is in a position of authority over the inmate;
  - (3) by the use of force or coercion that results in personal injury to the victim;
  - (4) by the use of force or coercion when the perpetrator is aided or abetted by one or more persons;
  - (5) in the commission of any other felony; or
  - (6) when the perpetrator is armed with a deadly weapon.

Whoever commits criminal sexual penetration in the second degree is guilty of a second degree felony.

- E. Criminal sexual penetration in the third degree consists of all criminal sexual penetration perpetrated through the use of force or coercion.

Whoever commits criminal sexual penetration in the third degree is guilty of a third degree felony.

- F. Criminal sexual penetration in the fourth degree consists of all criminal sexual penetration:
  - (1) not defined in Subsections C through E of this section perpetrated on a child thirteen to sixteen years of age when the perpetrator is at least eighteen years of age and is at least four years older than and not the spouse of that child; or
  - (2) perpetrated on a child thirteen to eighteen years of age when the perpetrator, who is a licensed school employee, an unlicensed school employee, a school contract employee, a school health service provider or a school volunteer, and who is at least eighteen years of age and is at least four years older than the child and not the spouse of that child, learns, while performing services in or for a school that the child is a student in a school.

Whoever commits criminal sexual penetration in the fourth degree is guilty of a fourth degree felony.

**30-9-12. Criminal sexual contact.**

- A. Criminal sexual contact is the unlawful and intentional touching of or application of force, without consent, to the unclothed intimate parts of another who has reached his eighteenth birthday, or intentionally causing another who has reached his eighteenth birthday to touch one's intimate parts.
- B. Criminal sexual contact does not include touching by a psychotherapist on his patient that is:
  - (1) inadvertent;
  - (2) casual social contact not intended to be sexual in nature; or
  - (3) generally recognized by mental health professionals as being a legitimate element of psychotherapy.
- C. Criminal sexual contact in the fourth degree consists of all criminal sexual contact perpetrated:
  - (1) by the use of force or coercion that results in personal injury to the victim;
  - (2) by the use of force or coercion when the perpetrator is aided or abetted by one or more persons; or
  - (3) when the perpetrator is armed with a deadly weapon.

Whoever commits criminal sexual contact in the fourth degree is guilty of a fourth degree felony.

- D. Criminal sexual contact is a misdemeanor when perpetrated with the use of force or coercion.
- E. For the purposes of this section, "intimate parts" means the primary genital area, groin, buttocks, anus or breast.

**30-9-13. Criminal sexual contact of a minor.**

Criminal sexual contact of a minor is the unlawful and intentional touching or applying force to the intimate parts of a minor or the unlawful and intentional causing a minor to touch one's intimate parts. For the purposes of this section, "intimate parts" means the primary genital area, groin, buttocks, anus or breast.

- A. Criminal sexual contact of a minor in the third degree consists of all criminal sexual contact of a minor perpetrated:
  - (1) on a child under thirteen years of age; or
  - (2) on a child thirteen to eighteen years of age when:
    - (a) the perpetrator is in a position of authority over the child and uses this authority to coerce the child to submit;
    - (b) the perpetrator uses force or coercion which results in personal injury to the child;
    - (c) the perpetrator uses force or coercion and is aided or abetted by one or more persons; or
    - (d) the perpetrator is armed with a deadly weapon.

Whoever commits criminal sexual contact in the third degree is guilty of a third degree felony.

- B. Criminal sexual contact of a minor in the fourth degree consists of all criminal sexual contact;
  - (1) not defined in Subsection A of this section, of a child thirteen to eighteen years of age perpetrated with force or coercion.
  - (2) perpetrated on a child thirteen to eighteen years of age when the perpetrator, who is a licensed school employee, an unlicensed school employee, a school contract employee, a school health service provider or a school volunteer, and who is at least eighteen years of age and is at least four years older than the child and not the spouse of that child, learns, while performing services in or for a school that the child is a student in a school.

Whoever commits criminal sexual contact in the fourth degree is guilty of a fourth degree felony.

**30-6-3. Contributing to delinquency of minor.**

- A. Contributing to the delinquency of a minor consists of any person committing any act or omitting the performance of any duty, which act or omission causes or tends to cause or encourage the delinquency of any person under the age of eighteen years. Whoever commits contributing to the delinquency of a minor is guilty of a fourth degree felony.

**30-9-14. Indecent exposure.**

- A. Indecent exposure consists of a person knowingly and intentionally exposing his primary genital area to public view.
- B. As used in this section, "primary genital area" means the mons pubis, penis, testicles, mons veneris, vulva or vagina.
- C. Whoever commits indecent exposure is guilty of a misdemeanor.
- D. In addition to any punishment provided pursuant to the provisions of this section, the court shall order a person convicted for committing indecent exposure to participate in and complete a program of professional counseling at his own expense.

**30-9-14.3. Aggravated indecent exposure.**

- A. Aggravated indecent exposure consists of a person knowingly and intentionally exposing his primary genital area to public view in a lewd and lascivious manner, with the intent to threaten or intimidate another person, while committing one or more of the following acts or criminal offenses:
  - (1) exposure to a child less than eighteen years of age;
  - (2) assault, as provided in Section 30-3-1 NMSA 1978;
  - (3) aggravated assault, as provided in Section 30-3-2 NMSA 1978;
  - (4) assault with intent to commit a violent felony, as provided in Section 30-3-3 NMSA 1978;
  - (5) battery, as provided in Section 30-3-4 NMSA 1978;
  - (6) aggravated battery, as provided in Section 30-3-5 NMSA 1978;
  - (7) criminal sexual penetration, as provided in Section 30-9-11 NMSA 1978; or
  - (8) abuse of a child, as provided in Section 30-6-1 NMSA 1978.
- B. As used in this section, "primary genital area" means the mons pubis, penis, testicles, mons veneris, vulva or vagina.
- C. Whoever commits aggravated indecent exposure is guilty of a fourth degree felony.
- D. In addition to any punishment provided pursuant to the provisions of this section, the court shall order a person convicted for committing aggravated indecent exposure to participate in and complete a program of professional counseling at his own expense.

**30-4-1. Kidnapping.**

- A. Kidnapping is the unlawful taking, restraining, transporting or confining of a person, by force, intimidation or deception, with intent:
  - (1) that the victim be held for ransom;
  - (2) that the victim be held as a hostage or shield and confined against his will;
  - (3) that the victim be held to service against the victim's will; or
  - (4) to inflict death, physical injury or a sexual offense on the victim.
- B. Whoever commits kidnapping is guilty of a first degree felony, except that he is guilty of a second degree felony when he voluntarily frees the victim in a safe place and does not inflict great bodily harm upon the victim.

### **30-10-3 Incest.**

Incest consists of knowingly intermarrying or having sexual intercourse with persons within the following degrees of consanguinity: parents and children including grandparents and grandchildren of every degree, brothers and sisters of the half as well as of the whole blood, uncles and nieces, aunts and nephews.

Whoever commits incest is guilty of a third degree felony.

---

## **ARTICLE 6A**

### **SEXUAL EXPLOITATION OF CHILDREN**

---

#### **30-6A-2. Definitions.**

As used in the Sexual Exploitation of Children Act [30-60A-1 to 30-60A-4 NMSA 1978]:

A. "prohibited sexual act" means:

- (1) sexual intercourse, including genital-genital, oral-genital, anal-genital or oral-anal, whether between persons of the same or opposite sex;
- (2) bestiality;
- (3) masturbation;
- (4) sadomasochistic abuse for the purpose of sexual stimulation; or
- (5) lewd and sexually explicit exhibition with a focus on the genitals or pubic area of any person for the purpose of sexual stimulation;

B. "visual or print medium" means:

- (1) any film, photograph, negative, slide, computer diskette, videotape, videodisc or any computer or electronically generated imagery; or
- (2) any book, magazine or other form of publication or photographic reproduction containing or incorporating any film, photograph, negative, slide, computer diskette, videotape, videodisc or any computer generated or electronically generated imagery;

C. "performed publicly" means performed in a place which is open to or used by the public; and

D. "manufacture" means the production, processing, copying by any means, printing, packaging or repackaging of any visual or print medium depicting any prohibited sexual act or simulation of such an act if one or more of the participants in that act is a child under eighteen years of age.

E. "obscene" means any material, when the content is taken as a whole:

- (1) appeals to a prurient interest in sex, as determined by the average person applying contemporary community standards;
- (2) portrays a prohibited sexual act in a patently offensive way; and
- (3) lacks serious literary, artistic, political or scientific value."

#### **30-6A-3. Sexual exploitation of children.**

(Effective 7-1-01)

A. It is unlawful for any person to intentionally possess any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts any prohibited sexual act or simulation of such act and if that person knows or has reason to know that one or more of the participants in that act is a child under eighteen years of age. A person who violates the provisions of this subsection is guilty of a fourth degree felony.

B. It is unlawful for a person to intentionally distribute any visual or print medium depicting any prohibited sexual act or simulation of such an act if that person knows or has reason to know that the obscene medium depicts any prohibited sexual act or simulation of such act and if that person knows

or has reason to know that one or more of the participants in that act is a child under eighteen years of age. A person who violates this subsection is guilty of a third degree felony.

- C. It is unlawful for any person to intentionally cause or permit a child under eighteen years of age to engage in any prohibited sexual act or simulation of such an act if that person knows, has reason to know or intends that the act may be recorded in any obscene visual or print medium or performed publicly. Any person who violates this subsection is guilty of a third degree felony, unless the child is under the age of thirteen, in which event the person is guilty of a second degree felony.
- D. It is unlawful for any person to intentionally manufacture any obscene visual or print medium depicting any prohibited sexual act or simulation of such an act if one or more of the participants in that act is a child under eighteen years of age. A person who violates the provisions of this subsection is guilty of a second degree felony.
- E. The penalties provided for in this section shall be in addition to those set out in Section 30-9-11 NMSA 1978.

#### **30-6A-4. Sexual exploitation of children by prostitution.**

- A. Any person knowingly receiving any pecuniary profit as a result of a child under the age of sixteen engaging in a prohibited sexual act with another is guilty of a second degree felony, unless the child is under the age of thirteen, in which event the person is guilty of a first degree felony.
- B. Any person hiring or offering to hire a child over the age of thirteen and under the age of sixteen to engage in any prohibited sexual act is guilty of a second degree felony.
- C. Any parent, legal guardian or person having custody or control of a child under sixteen years of age who knowingly permits that child to engage in or to assist any other person to engage in any prohibited sexual act or simulation of such an act for the purpose of producing any visual or print medium depicting such an act is guilty of a third degree felony.

#### **30-9-1. Enticement of child.**

Enticement of child consists of:

- A. enticing, persuading or attempting to persuade a child under the age of sixteen years to enter any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 [30-9-1 to 30-9-9 NMSA 1978] of the Criminal Code; or
- B. having possession of a child under the age of sixteen years in any vehicle, building, room or secluded place with intent to commit an act which would constitute a crime under Article 9 of the Criminal Code.

Whoever commits enticement of child is guilty of a misdemeanor.

## Appendix C. Participating Law Enforcement Agencies

Agency Name	Address	City	State	Zip
Alamogordo Dept.of Public Safety	700 Virginia Avenue	Alamogordo	NM	88310
Albuquerque Police Department	400 Roma NW	Albuquerque	NM	87102

*This form is to be completed by each therapist in each mental health/rape crisis center and their satellite offices for every client who presents or later discloses sexual assault/abuse. Please submit forms to: NMCSAP (505-883-8020), 3909 Juan Tabo NE, Suite 6, Albuquerque, NM 87111, by the tenth of every month.*

1. Name of Agency \_\_\_\_\_

2. Client Identifier \_\_\_\_\_

**A. Survivor Information**3. Date of most recent sexual assault/abuse incident \_\_/\_\_/\_\_ (mo / yr) 4. Survivor Gender:  Male  Female

5. Survivor's Age at time of most recent sexual assault/abuse incident \_\_\_\_\_ 6. Survivor's Current age \_\_\_\_\_

7. Survivor Ethnicity: (check one)  White (Non-Hispanic)  Hispanic  Mixed  Native American  
 Black  Asian  Unknown8. Survivor Disability (check all that apply):  None  Visual  Mobility  Hearing  Physical  
 Emotional/Mental (prior to this incident)  Unknown9. Did the survivor use alcohol or drugs immediately prior to or during the most recent sexual assault incident?  
 Yes  No  Unknown10. Did the survivor contract a sexually transmitted disease as a result of the most recent sexual assault?  
 Yes  No  Unknown11. Did a pregnancy result from the most recent sexual assault?  Yes  No  Unknown12. Did the survivor have a history of domestic violence as a child, either as a witness or as one directly victimized?  
 Yes  No  Unknown13. Was client ever sexually assaulted/abused before this incident?  No (skip to q.15)  Yes (answer 13a or b)  
 Unknown (skip to q.15)*If Yes to q.13 and,*a) the client is a victim of *ongoing* sexual abuse, enter age at onset of sexual abuse \_\_\_\_\_. (If this age is under 18, go to q.14). If age at onset of ongoing sexual abuse is unknown, check:  Age Unknown (skip to q.15)*If Yes to q. 13 and,*b) the client is *not* a victim of *ongoing* abuse, enter age at time of prior incident of sexual assault/abuse \_\_\_\_\_. (If this age is under 18, go to q.14) If age at time of prior sexual assault is unknown, check:  Age Unknown (skip to q.15)14. If the survivor experienced a prior sexual assault/abuse at any time before age 18, did the survivor ever become pregnant before age 18?  
 Yes (answer q.14b)  No  Unknown14b. If Yes, was the pregnancy a result of the prior sexual assault?  Yes  No  Unknown**B. Offender Information**15. Number of offenders involved in the most recent sexual assault: (check one)  One  Two  Three  
 Four or more  Unknown**If more than one offender in the most recent sexual assault, choose one offender to answer questions 16-27**16. Offender Gender:  Male  
(check one)  Female17. Offender Age: (check one)  5 and under  6-12  13-17  18-24  
 25-34  35-44  45-54  55-64  65+  Unknown

18. *Offender Ethnicity* (check one):  **White (Non-Hispanic)**  **Hispanic**  **Native American**  **Black**  
 **Asian**  **Mixed**  **Unknown**

19. *Did the offender use alcohol or drugs immediately prior to or during the current sexual assault incident?*  
 **Yes**  **No**  **Unknown**

20. *Did the offender have a history of domestic violence as a child, either as a witness or one directly victimized?*  
 **Yes**  **No**  **Unknown**

### C. Sexual Offense Information

21. *Type of Offense:* (check all that apply)  **Penetration** (includes: oral, anal, vaginal) - *please specify, if applicable:*  
 **spousal rape**  **incest**  **date rape**  **gang rape**

**Attempted Penetration**

**Sexual Harassment**

**Fondling (no penetration)**  **Stalking**  **Indecent Exposure**  **Unknown**

22. *Survivor/Offender Relationship* (check only one, either from 22a, 22b or 22c):

a) *Known Relative Offender:*  **Father**  **Mother**  **Sister**  **Brother**  **Step-Brother**  
 **Grandfather**  **Grandmother**  **Step-mother**  **Step-father**  **Current spouse**  
 **Brother in law**  **Sister in Law**  **Cousin**  **Aunt**  **Uncle**  **Other**

b) *Known Non-Relative Offender:*  **Ex- spouse**  **Mom's boyfriend**  **Dad's girlfriend**  
 **Mom's lesbian partner**  **Dad's gay partner**  **Survivors lesbian/gay partner**  
 **Social acquaintance**  **New acquaintance**  **Employer**  
 **Clergy/spiritual leader**  **Health care provider**  **Friend**  **Teacher**  
 **Therapist**  **Boyfriend**  **Girlfriend**  **Co-worker**  **Other**

c)  **Stranger**

23. *Was the offender the same ethnicity as the survivor?*  **Yes**  **No**  **Unknown**

24. *Type of Coercion/Weapon Used:* (check all that apply)

**Knife**  **Physical Force**  **Verbal Threat**  **Manipulation**  
 **Gun**  **Other Weapon**  **Intentionally drugged by perpetrator**  
 **Other \_\_\_\_\_**  **Unknown**

25. *Location of Most Recent Offense:* (check one)

**Vehicle**  **Survivor's home**  **Offender's home**  **Other residence**  
 **Public Facility**  **Parking Lot**  **Workplace**  **School**  
 **Multiple locations**  **Other \_\_\_\_\_**  **Unknown**

26. \_\_\_\_\_ / \_\_\_\_\_ / \_\_\_\_\_ / \_\_\_\_\_  
city county state reservation or country outside of U.S.

27. *Time of most recent assault:*  **Morning (6a.m.-noon)**  **Afternoon (12:01-6p.m.)**  
 **Evening (6p.m.-10p.m.)**  **Night (10:01p.m.-6a.m.)**  **Unknown**

28. *The most recent sexual assault was reported by:* (check one)  **Survivor**  **Therapist**  **Not Reported**  
 **Unknown**  **Other \_\_\_\_\_**

29. *If reported, the most recent sexual assault was reported to* (check all that apply):

**Social Services**  **Rape Crisis Center**  **ER/Sexual Assault Nurse Examiner**  **Law Enforcement**  
 **Other**  **Unknown**

30. *Was medical treatment sought for injuries?*  **Yes**  **No**  **Unknown**

31. *Was rape kit evidence collection within 72 hours after assault?*  **Yes**  **No**  **Unknown**

32. *If known, survivor's family annual income at the time of the most recent incident \_\_\_\_\_.*  **Income Unknown**
