

Audiogram of Familiar Sounds

The speech sounds on this chart are approximations. The specific pitch of a human voice will vary depending on whether a man, woman or child is speaking. The distance between the speaker and listener will also impact speech sounds, creating a variety in sound intensity (loud or soft) for the listener.

Frequency

measured in cycles per second

Adapted from the American Academy of Audiology and Northern, J. & Downs, M., *Hearing in Children*, (5th Edition, pg. 18), Lippincott Williams and Wilkins, Baltimore, MD, 2002.
