

Technology Implementation Process

1
IDT/Circle of Support identifies an individual who could benefit from technology

2
IDT/Circle of Support completes the Tech Screening Matrix to determine if tech implementation is appropriate

3
Materials/links for various tech solutions provided to individual/guardian

IDT/Circle of Support education is important for successful implementation

4
Vendor is selected

5
Meeting with IDT/Circle of Support and Vendor to choose appropriate solution(s)

6
Vendor develops Tech Design doc

7
IDT/Circle of support develops an Enabling Tech Implementation Plan (ETIP)

8
IDT/Circle of Support develop the budget and submit for approval

9
Vendor configures solution for individual

A Task Force liaison will assist with this process

11
Vendor trains DSP, individual and others identified

10
Initial implementation

Transition phase where direct supports may be reduced as milestones are met. Additionally, adjustments to the tech solutions, staffing, etc may need to occur

This is not a static process and often multiple adjustments are required

12

Supports are provided to the individual as usual, however the tech solution is also utilized.
