

Are you at risk for Hepatitis A?

People who are at high risk include:

- Men who have sex with men
- People who use syringes or substances
- People currently experiencing homelessness or unstable housing
- People recently in jail or prison
- People with underlying liver disease

*Note: people with underlying liver disease (e.g., cirrhosis, hepatitis B, or hepatitis C) are at increased risk of having poor outcomes if they are infected with hepatitis A.

Ask your doctor about vaccination if you are at high risk.

The best ways to protect against hepatitis A are to get the hepatitis A vaccine and wash your hands often with soap and water.
