

Questions about Flu, COVID-19 and Pneumococcal Vaccines?

Influenza, also called the flu

- Influenza is a serious disease.
- You can get your flu vaccine and COVID vaccine at the same visit.
- You need a flu vaccine every year.

COVID-19

- Updated COVID-19 vaccines are available this fall to protect us from new variants
- You can get your flu vaccine and COVID vaccine at the same visit.
- Get vaccinated for cold and flu season.

Pneumococcal disease

- Pneumococcal vaccine can prevent pneumonia, which can be a complication of influenza.
- Pneumococcal disease refers to a wide range of infections, including pneumonia, meningitis, sinus infections, sepsis, and ear infections.
- The best way to prevent pneumococcal disease is through vaccination.

Talk to your provider or pharmacist to see if they recommend these or any other vaccines for you.

**Say NO to disease.
Say YES to vaccines!**
