

Questions about Flu, COVID-19, and Pneumococcal Vaccines?

Did you know?

Influenza (also called the Flu)

- Influenza, also called flu, is a serious disease.
- You can get your flu vaccine and COVID vaccine at the same visit.
- You need a flu vaccine every year.

COVID-19

- COVID-19 primary vaccines and boosters are now available.
- You can get your flu vaccine and COVID vaccine at the same visit.
- It's not too late to get vaccinated.

Pneumococcal Disease

- Pneumococcal vaccine can prevent pneumonia caused by pneumococcus bacterium, which can be a complication of influenza.
- Pneumococcal disease refers to a wide range of infections that can be caused by pneumococcal bacteria, including pneumonia, meningitis, sinus infections, bloodstream infections, sepsis, and ear infections.
- The best way to prevent pneumococcal disease is through vaccination.

Say NO to disease. Say YES to vaccines!

Talk to your doctors to see if they recommend these or any other vaccines for you.
