Item	Description
File Name	user defined upon initiation of job
Frequency	
File Format	The load file must be formatted to comply with the ASCII DOS standard.
Delimiter	Fixed Delimiter is the pipe symbol '|'

Other Process	Special statuses (ie BIRTH_REGISTRATION_REGISTRATION_STATUS_SPECIAL_STATUS1): like "Converted" or "Legacy" record should be inserted into one of the special status columns in fields 476, 479, 482 etc if you want the "Converted" status to appear on the Life Events status line.
General Formatting Instructions	Files containing unicode characters cannot be reliably read by the load process. File must be ASCII/DOS character set The last data record in the file should also contain a CRLF at the end. (ie the last characters in the file should be the CRLF of the last data record.) no trailing spaces. Character columns should not exceed the defined max length. Date_Long columns should be formatted as 12 Digit numeric values using the Dave standard (YYYYMMDDHHmm) Where YYYY = 4 digit numeric Year, MM = 2 digit numeric Month, DD = 2 digit numeric Day, HH = 2 digit military Hour, mm = 2 Digit numeric Minute Example: 201806300307 would represent June 30th 2018 at 7:27 pm If unknown hour or unknown minute, the unknown values are represented by 66 Example: 201806060360 represents an unknown day in June, 2018 at 7pm with an unknown minute. Example: 201606696615 represents an unknown day in June, 2016 at 15 minutes past an unknown hour. Example: 196112076666 represents December ?, 1961 with unknown time. Field 589 Action should be blank or 0 if this is an insert of a new case into Dave Vital Records system, or 1 if this is an update to an existing Dave Vital Records case. Event Year and File Number should uniquely identify registered cases. Existing cases are located using searches of these columns: BIRTH_TASK_PLACE_OF_BIRTH_FIPS_STATE_GEO_CODE_GEO_CODE_VALUE (this is the 2-digit FIPS state code for the place of birth) BIRTH_REGISTRATION_REGISTRATION_EVENT_DATE_LONG (12 digit event formatted as described in above examples) BIRTH_REGISTRATION_REGISTRATION_FILE_NUMBER (State File Number) BIRTH_REGISTRATION_REGISTRATION_DOS_FILE_NUMBER (out of state file number) For conversions of state residents whose births happened to occur out of state this is the file_number given to the case by the owner of record state. If no value for field 234 REGISTRATION_STATUS is supplied the default for the loaded case will be "Registered"
Parameters	File to load, load_birth Select a properly formatted conversion file from your file system to load into Dave
Status Change	n/a
