postpartum period; care of the normal newborn; and treatment of male partnersclients for sexually transmitted infections. Midwives provide initial and ongoing comprehensive assessment, diagnosis, and treatment. They conduct physical examinations; independently prescribe, distribute, and administer dangerous drugs, devices, and contraceptive methods, and controlled substances in Schedules II through V of Sections 30-31-1 NMSA 1978, Controlled Substances Act; admit, manage, and discharge patientsclients; order and interpret laboratory and diagnostic tests; and order the use of medical devices. Midwifery care also includes health promotion, disease prevention, and individualized wellness education and counseling. These services are provided in partnership with clients/patients in diverse settings such as ambulatory care clinics, private offices, community and public health systems, homes, hospitals, and birth centers. A CNM practices within a health care system that provides for consultation, collaborative management, or referral as indicated by the health status of the client. A CNM practices in accordance with the ACNM "standards for the practice of midwifery". A CNM who expands beyond the ACNM "core competencies" to incorporate new procedures that improve care for their clients/patients shall comply with the guidelines set out in the ACNM "standards for the practice of midwifery", standard VIII. Practice guidelines for home births should be informed by the most recent edition of the "ACNM home birth practice manual."
